Analyzes the evolution of contemporary art in Chile from 1973 to 2007. This edition reproduces more than 500 color images of works by 74 contemporary artists (selected by editor Mosquera) including names such as: Juan Downey, Carlos Arias, (Santiago, Chile, 1964); Juan Castillo, (Antofagasta, 1952); Eugenio Dittborn, (Santiago, Chile, 1943); Paz Errzuriz, (Santiago, Chile, 1944); Volupsa Jarpa, (Rancagua, 1971); Carlos Leppe, (Santiago, Chile, 1952); and Carolina Ruff, (Santiago, Chile, 1973), as well as younger generation artists. The artists are presented in alphabetical order with brief introductory texts. Each reproduced work is rigorously documented with a caption that, in addition to providing the technical data offers the reader a description of the work for better comprehension. Six essays by noted critics and art historians: Guillermo Machuca, María Berrós, Justo Pastor Mellado, Catalina Mena, Nelly Richard y Adriana Vlads (description provided by vendor).

Today, anyone in a scientific or technical discipline needs programming skills. Python is an ideal first programming language, and Introduction to Programming in Python is the best guide to learning it. Princeton University's Robert Sedgewick, Kevin Wayne, and Robert Dondero have crafted an accessible, interdisciplinary introduction to programming in Python that emphasizes important and engaging applications, not toy problems. The authors supply the tools needed for students to learn that programming is a natural, satisfying, and creative experience. This example-driven guide focuses on Python's most useful features and brings programming to life for every student in the sciences, engineering, and computer science. Coverage includes Basic elements of programming: variables, assignment statements, built-in data types, conditionals, loops, arrays, and I/O,

including graphics and sound Functions, modules, and libraries: organizing programs into components that can be independently debugged, maintained, and reused Object-oriented programming and data abstraction: objects, modularity, encapsulation, and more Algorithms and data structures: sort/search algorithms, stacks, queues, and symbol tables Examples from applied math, physics, chemistry, biology, and computer science—all compatible with Python 2 and 3 Drawing on their extensive classroom experience, the authors provide Q&As, exercises, and opportunities for creative practice throughout. An extensive amount of supplementary information is available at introc.cs.princeton.edu/python. With source code, I/O libraries, solutions to selected exercises, and much more, this companion website empowers people to use their own computers to teach and learn the material.

El emprendimiento es un determinante fundamental del crecimiento y la creación de empleo. Pese a que los emprendedores abundan en América Latina y el Caribe, las empresas de la región son más pequeñas y menos propensas a crecer e innovar que las de otras regiones. El crecimiento de la productividad lleva décadas siendo mediocre y el reciente period de auge de las materias primas no ha supuesto una excepción. Así pues, la presencia de emprendedores dinámicos será necesaria para impulsar la creación de puestos de trabajo de calidad y la aceleración del crecimiento de la productividad en la región. En El emprendimiento en América Latina: muchas empresas y poca innovación se estudia el panorama del emprendimiento en América Latina y el Caribe. El libro recurre a nuevas bases de datos que abordan cuestiones como la creación de empresas, las dinámicas empresariales, las decisiones de exportar y el comportamiento de las corporaciones multinacionales y sintetiza los resultados de un análisis exhaustivo del estatus, las perspectivas y los retos del emprendimiento en la región. Asimismo, el libro suministra herramientas útiles e información para ayudar a los profesionales y responsables de las políticas a identificar los ámbitos de las mismas que los gobiernos pueden explorar para impulsar la innovación e incentivar el emprendimiento transformador con potencial de crecimiento elevado.

'KUMBA AFRICA', is a compilation of African Short Stories written as fiction by Sampson Ejike Odum, nostalgically taking our memory back several thousands of years ago in Africa, reminding us about our past heritage. It digs deep into the traditional life style of the Africans of old, their beliefs, their leadership, their courage, their culture, their wars, their defeat and their victories long before the emergence of the white man on the soil of Africa. As a talented writer of rich resource and superior creativity, armed with in-depth knowledge of different cultures and traditions in Africa, the Author throws light on the rich cultural heritage of the people of Africa when civilization was yet unknown to the people. The book reminds the

readers that the Africans of old kept their pride and still enjoyed their own lives. They celebrated victories when wars were won, enjoyed their New yam festivals and villages engaged themselves in seasonal wrestling contest etc; Early morning during harmattan season, they gathered firewood and made fire inside their small huts to hit up their bodies from the chilling cold of the harmattan. That was the Africa of old we will always remember. In Africa today, the story have changed. The people now enjoy civilized cultures made possible by the influence of the white man through his scientific and technological process. Yet there are some uncivilized places in Africa whose people haven't tested or felt the impact of civilization. These people still maintain their ancient traditions and culture. In everything, we believe that days when people paraded barefooted in Africa to the swamp to tap palm wine and fetch firewood from there farms are almost fading away. The huts are now gradually been replaced with houses built of blocks and beautiful roofs. Thanks to modern civilization. Donkeys and camels are no longer used for carrying heavy loads for merchants. They are now been replaced by heavy trucks and lorries. African traditional methods of healing are now been substituted by hospitals. In all these, I will always love and remember Africa, the home of my birth and must respect her cultures and traditions as an AFRICAN AUTHOR.

With the recent Sokal hoax--the publication of a prominent physicist's pseudo-article in a leading journal of cultural studies--the status of science moved sharply from debate to dispute. Is science objective, a disinterested reflection of reality, as Karl Popper and his followers believed? Or is it subjective, a social construction, as Thomas Kuhn and his students maintained? Into the fray comes "Mystery of Mysteries," an enlightening inquiry into the nature of science, using evolutionary theory as a case study. Michael Ruse begins with such colorful luminaries as Erasmus Darwin (grandfather of Charles) and Julian Huxley (brother of novelist Aldous and grandson of T. H. Huxley, "Darwin's bulldog") and ends with the work of the English game theorist Geoffrey Parker--a microevolutionist who made his mark studying the mating strategies of dung flies--and the American paleontologist Jack Sepkoski, whose computer-generated models reconstruct mass extinctions and other macro events in life's history. Along the way Ruse considers two great popularizers of evolution, Richard Dawkins and Stephen Jay Gould, as well as two leaders in the field of evolutionary studies, Richard Lewontin and Edward O. Wilson, paying close attention to these figures' cultural commitments: Gould's transplanted Germanic idealism, Dawkins's male-dominated Oxbridge circle, Lewontin's Jewish background, and Wilson's southern childhood. Ruse explicates the role of metaphor and metaphors in evolutionary thought and draws significant conclusions about the cultural impregnation of science. Identifying strengths and weaknesses on both sides of the "science wars," he demonstrates that a resolution of the objective and subjective debate is nonetheless possible.

Bestselling author David Gessner's wilderness road trip inspired by America's greatest conservationist, Theodore Roosevelt, is "a rallying cry in the age of climate change" (Robert Redford). "Leave it as it is," Theodore Roosevelt announced while viewing the Grand Canyon for the first time. "The ages have been at work on it and man can only mar it." Roosevelt's pronouncement signaled the beginning of an environmental fight that still wages today. To reconnect with the American wilderness and with the president who courageously protected it, acclaimed nature writer and New York Times bestselling author David Gessner embarks on a great American road trip guided by Roosevelt's crusading environmental legacy. Gessner travels to

the Dakota badlands where Roosevelt awakened as a naturalist; to Yellowstone, Yosemite, and the Grand Canyon where Roosevelt escaped during the grind of his reelection tour; and finally, to Bears Ears, Utah, a monument proposed by Native Tribes that is currently embroiled in a national conservation fight. Along the way, Gessner questions and reimagines Roosevelt's vision for today's lands. "Insightful, observant, and wry," (BookPage) *Leave It As It Is* offers an arresting history of Roosevelt's pioneering conservationism, a powerful call to arms, and a profound meditation on our environmental future.
