originally presented at the Sixth Congress of the Italian Association for Artificial Intelligence (AI*IA). The congress of the AI*IA is the most relevant Italian event in the field of Artificial Intelligence, and has been receiving much attention from many researchers and practitioners of different countries. The sixth congress was held in Bologna, 14-17 September

1999, and was organized in twelve scientific sessions and one demo session. The papers here collected report on significant work carried out in different areas of artificial intelligence, in Italy and other countries. Areas such as automated reasoning, knowledge representation, planning, and machine learning continue to be thoroughly investigated. The collection also shows a growing

interest in the field of multi-agent systems, perception and robotics, and temporal reasoning. Many people contributed in different ways to the success of the congress and to this volume. First of all, the members of the program committee who efficiently handled the reviewing of the 64 papers submitted to the congress, and later on the reviewing of the 41 papers submitted for publication in

this volume. They provided three reviews for each manuscript, by relying on the support of valuable additional reviewers. The members of the organizing committee, namely Rosangela Barruffi, Paolo Bellavista, Anna Ciampolini, Marco Cremonini, Enrico Denti, Marco Gavanelli, Mauro Gaspari, Michela Milano, Rebecca Montanari, Andrea Omicini, Fabrizio Riguzzi, Cesare Stefanelli, and Paolo Torrioni, worked hardy supporting at solving problems during and after the congress. The Indian Tipi Elsevier First published in 1954, Robert H. Lowie's Indians of the Plains surveys in a lucid and concise fashion the history and culture of the Indian tribes between the Mississippi and the Rocky Mountains. The author visited various tribes from 1906 to 1931, observing them carefully, participating in their lifeways, studying their languages, and listening to their legends and tales. After a half century of study, Lowie wrote this book, praised by anthropologists as the synthesis of a lifetime's work. A preface by Raymond J. DeMallie situates the book in the history of American anthropology

<p>and describes information and changes in interpretation that have emerged since Indians of the Plains first appeared.</p>	<p>Published since 1911, it contains a proven mix of news, nature, sports, history, fiction, science, comics, and Scouting.</p>	<p>This book contains contributions from experts in the field is divided in two sections (GA and ANN). In each part, tutorial chapters are included in which the theoretical bases of each technique are expertly (but simply) described. These are followed by application chapters in which special emphasis will be given to the advantages of the application of GA or ANN to that specific</p>
<p>Performance Evaluation of Mutual Funds Via Single Valued Neutrosophic Set (SVNS) Perspective: A Case Study in Turkey Springer Science & Business Media Boys' Life is the official youth magazine for the Boy Scouts of America.</p>	<p><i>AI*IA 99:Advances in Artificial Intelligence</i> MDPI In recent years Genetic Algorithms (GA) and Artificial Neural Networks (ANN) have progressively increased in importance amongst the techniques routinely used in chemometrics.</p>	

problem, compared to classical techniques, and to the risks connected with its misuse. This book is of use to all those who are using or are interested in GA and ANN. Beginners can focus their attentions on the tutorials, whilst the most advanced readers will be more interested in looking at the applications of the techniques. It is also suitable as a reference book for

students. - Subject matter is steadily increasing in importance - Comparison of Genetic Algorithms (GA) and Artificial Neural Networks (ANN) with the classical techniques - Suitable for both beginners and advanced researchers Bioinformatics Applications Based On Machine Learning Frontiers Media SA A brief meditation on the role of technology in

his own life and how it has changed the landscape of the United States from "America's greatest philosopher on sustainable life and living" (Chicago Tribune). "A number of people, by now, have told me that I could greatly improve things by buying a computer. My answer is that I am not going to do it. I have several reasons, and they are good ones." Wendell Berry first challenged the

idea that our advanced technological age is a good thing when he penned "Why I Am Not Going to Buy a Computer" in the late 1980s for Harper's Magazine, galvanizing a critical reaction eclipsing any the magazine had seen before. He followed by responding with "Feminism, the Body, and the Machine." Both essays are collected in one short volume for the first time. *Modeling and Simulation in*

Engineering Springer Customizable processors have been described as the next natural step in the evolution of the microprocessor business: a step in the life of a new technology where top performance alone is no longer sufficient to guarantee market success. Other factors become fundamental, such as time to market, convenience, energy efficiency, and ease of

customization. This book is the first to explore comprehensively one of the most fundamental trends which emerged in the last decade: to treat processors not as rigid, fixed entities, which designers include "as is in their products; but rather, to build sound methodologies to tailor-fit processors to the specific needs of such products. This book addresses the goal of maintaining a

very large family of processors, with a wide range of features, at a cost comparable to that of maintaining a single processor. - First book to present comprehensively the major ASIP design methodologies and tools without any particular bias - Written by most of the pioneers and top international experts of this young domain - Unique mix of management perspective,

technical detail, research outlook, and practical implementation
Why I Am Not Going to Buy a Computer
 Metropolitan Museum of Art
 How much do you really know about totem poles, tipis, and Tonto? There are hundreds of Native tribes in the Americas, and there may be thousands of misconceptions about Native customs, culture, and history. In this illustrated guide, experts from

Smithsonian's National Museum of the American Indian debunk common myths and answer frequently asked questions about Native Americans past and present. Readers will discover the truth about everything from kachina dolls to casinos, with answers to nearly 100 questions, including: Did Indians really sell Manhattan for twenty-four dollars worth of beads and

<p>trinkets? Are dream catchers an authentic tradition? Do All Indians Live in Tipis? Second Edition features short essays, mostly Native-authored, that cover a range of topics including identity; origins and histories; clothing, housing, and food; ceremony and ritual; sovereignty; animals and land; language and education; love and marriage; and arts, music,</p>	<p>dance, and sports. <i>The Oxford Handbook of the Five Factor Model</i> U of Nebraska Press This book provides an open platform to establish and share knowledge developed by scholars, scientists, and engineers from all over the world, about various applications of the modeling and simulation in the design process of products, in various engineering fields. The book consists of 12 chapters</p>	<p>arranged in two sections (3D Modeling and Virtual Prototyping), reflecting the multidimensionality of applications related to modeling and simulation. Some of the most recent modeling and simulation techniques, as well as some of the most accurate and sophisticated software in treating complex systems, are applied. All the original contributions in this book are jointed by the basic principle of a</p>
--	---	---

successful modeling and simulation process: as complex as necessary, and as simple as possible. The idea is to manipulate the simplifying assumptions in a way that reduces the complexity of the model (in order to make a real-time simulation), but without altering the precision of the results.

ANTHROPOLOGICAL PAPERS OF THE American Museum of Natural History
Smithsonian Institution

This book constitutes the thoroughly refereed post-proceedings of the Second International Workshop of the TYPES Working Group, TYPES 2002, held in Berg en Dal, The Netherlands in April 2002. The 18 revised full papers presented were carefully selected during two rounds of reviewing and improvement. All current issues in type theory and type systems and their applications to programming,

systems design, and proof theory are addressed. Among the systems dealt with are Coq and Isar/HOL.

Digital Transformation and Global Society
Springer Science & Business Media
This monumental new book is the first to celebrate the greatest and most iconic paintings from the encyclopedic collections of The Metropolitan Museum of

Art, New York, one of the largest, most important, and most beloved museums in the world. This impressive volume's broad sweep of material, all from a single museum, makes it at once a universal history of painting and the ideal introduction to the iconic masterworks of this world-renowned institution. More than 1,000 lavish color illustrations and details of 500

masterpiece paintings, created over 5,000 years in cultures across the globe, are presented chronologically from the dawn of civilization to the present. These works represent a grand tour of painting from ancient Egypt and classical antiquity and prized Byzantine and medieval altarpieces, to paintings from Asia, India, Africa and the Americas, and the greatest European and North

American masters. The Metropolitan Museum of Art includes and introduction and illuminating texts about each artwork written specially for this volume by Kathryn Calley Galitz, whose experience as both curator and educator at the Met makes her uniquely qualified. European and American artists include Duccio, El Greco, Raphael, Titian, Botticelli, Bronzino, Caravaggio,

Turner, Velázquez, Goya, Rubens, Rembrandt, Brueghel, Vermeer, David, Renior, Monet, Van Gogh, Gauguin, Cézanne, Degas, Sargent, Homer, Matisse, Picasso, Pollock, Jasper Johns, and Warhol. The artworks are arranged in rough chronological order, without regard to geography or culture, offering a visual timeline of the history of painting, from the

earliest examples on pottery jars made over five thousand years ago to canvases on which the paint has barely dried. Freed from the constraints imposed by the physical layout of the Museum, the paintings resonate anew; and this chronological framework reveals unexpected visual affinities among the works. For those wishing to experience the unparalleled

breadth and depth of the Met's collection, or study masterpieces of painting from throughout history, this important volume is sure to become a classic cherished by art lovers around the world.

A Digital Model of Pattern and Productivity in an Agroforestry Landscape

Academic Press

In the area of multivariate analysis, there are two broad themes that

have emerged over time. The analysis typically involves exploring the variations in a set of interrelated variables or investigating the simultaneous relationships between two or more sets of variables. In either case, the themes involve explicit modeling of the relationships or dimension-reduction of the sets of variables. The multivariate regression methodology and its

variants are the preferred tools for the parametric modeling and descriptive tools such as principal components or canonical correlations are the tools used for addressing the dimension-reduction issues. Both act as complementary to each other and data analysts typically want to make use of these tools for a thorough analysis of multivariate data. A technique that combines the

two broad themes in a natural fashion is the method of reduced-rank regression. This method starts with the classical multivariate regression model framework but recognizes the possibility for the reduction in the number of parameters through a restriction on the rank of the regression coefficient matrix. This feature is attractive because regression methods, whether they are in the

context of a single response variable or in the context of several response variables, are popular statistical tools. The technique of reduced rank regression and its encompassing features are the primary focus of this book. The book develops the method of reduced-rank regression starting from the classical multivariate linear regression model. *Boys' Life* Elsevier

Historical information and descriptions of Indian crafts of different tribes
Types for Proofs and Programs
 University of Oklahoma Press
 When the first edition of this book was published in 1957, the art of making a tipi was almost lost, even among American Indians. Since that time a tremendous resurgence of interest in the Indian way of life has occurred, resurgence

due in part, at least, to the Laubins' life-long efforts at preservation and interpretation of Indian culture. As The Indian Tipi makes obvious, the American Indian is both a practical person and a natural artist. Indian inventions are commonly both serviceable and beautiful. Other tents are hard to pitch, hot in summer, cold in winter, poorly lighted, unventilated, easily blown down, and

ugly to boot. The conical tipi of the Plains Indian has none of these faults. It can be pitched by one person. It is roomy, well ventilated at all times, cool in summer, well lighted, proof against high winds and heavy downpours, and, with its cheerful fire inside, snug in the severest winter weather. Moreover, its tilted cone, trim smoke flaps, and crown of poles, presenting a different

silhouette from every angle, form a shapely, stately dwelling even without decoration. In this new edition the Laubins have retained all the invaluable aspects of the first edition, and have added a tremendous amount of new material on day-to-day living in the tipi: the section on Indian cooking has been expanded to include a large number and range of Indian foods and recipes,

as well as methods of cooking over an open fire, with a reflector oven, and with a ground oven; there are new sections on making buckskin, making moccasins, and making cradle boards; there is a whole new section on child care and general household hints. Shoshoni, Cree, and Assiniboine designs have been added to the long list of tribal tipi types discussed.

This new edition is richly illustrated with color and black and white photographs, and drawings to aid in constructing and living in the tipi. It is written primarily for the interested amateur, and will appeal to anyone who likes camping, the out-of-doors, and American Indian lore. Assessment of Psychological Functioning and Risk in Healthcare Settings Infinite Study
There is a vast

body of research supporting the Five Factor Model as the predominant model of general personality structure within the field of social psychology. The Oxford Handbook of the Five Factor Model is dedicated to this model of research. Smithsonian Contributions to Anthropology Catapult
This three-volume set LNAI 8724, 8725 and 8726 constitutes the refereed

proceedings of the European Conference on Machine Learning and Knowledge Discovery in Databases: ECML PKDD 2014, held in Nancy, France, in September 2014. The 115 revised research papers presented together with 13 demo track papers, 10 nectar track papers, 8 PhD track papers, and 9 invited talks were carefully reviewed and selected from 550 submissions. The papers

cover the latest high-quality interdisciplinary research results in all areas related to machine learning and knowledge discovery in databases. Building ASIPs: The Mescal Methodology World Wisdom, Inc The great advances in information technology (IT) have implications for many sectors, such as bioinformatics, and has considerably increased their possibilities.

This book presents a collection of 11 original research papers, all of them related to the application of IT-related techniques within the bioinformatics sector: from new applications created from the adaptation and application of existing techniques to the creation of new methodologies to solve existing problems.

Material Culture of the Blackfoot

Indians Oxford University Press American Indian legends retold. Craft. *Psychometrics and Psychological Assessment* Springer Communication systems are now ubiquitous and making them more intelligent remains very challenging. The IFIP International Conference on Intelligence in Communication Systems is an effort to bring together researchers and practitioners

who represent the latest developments in this area. This volume contains selected papers from the conference in the following focus areas: ad hoc networks / hybrid networks / WLAN; security, privacy and consumer protection; adaptive architectures and protocols; flexible QoS and QoS management; flexible service specification, validation, searching and

querying; service composition and Web services; personal, terminal and node mobility; programmable and active networks. **Customizable Embedded Processors** BoD - Books on Demand Psychometrics and Psychological Assessment: Principles and Applications reports on contemporary perspectives and models on psychological assessment and their corresponding measures. It highlights

topics relevant to clinical and neuropsychological domains, including cognitive abilities, adaptive behavior, temperament, and psychopathology. Moreover, the book examines a series of standard as well as novel methods and instruments, along with their psychometric properties, recent meta-analytic studies, and their cross-cultural applications. - Discusses

psychometric issues and empirical studies that speak to same - Explores the family context in relation to children's behavioral outcomes - Features major personality measures as well as their cross cultural variations - Identifies the importance of coping and resilience in assessing personality and

psychopathology - Examines precursors of aggression and violence for prediction and prevention
A Guide to the Kiowa Collections at the Smithsonian Institution
 Springer
 This study compares a model of the relationship between tipi and the tipi ring, using primarily ethnographic

information, to data from the British Block Cairn site in southeastern Alberta. It demonstrates that the tipi required a considerable investment of raw materials, and, as a result, the tipi ring is a product of a carefully reasoned decision on the correct anchoring strategy for a given environmental setting.
