---

Information Retrieval Architecture and Algorithms Peter Lang

Enterprise data is growing at a much faster rate than traditional technologies allow. New enterprise architectures combining existing technologies are desperately needed. This book suggests a way forward by applying new techniques of the World Wide Web to enterprise information systems. Linking Enterprise Data is an edited volume contributed by worldwide leaders in Semantic Web and Linked Data research, standards development and adoption. Linking enterprise data is the application of World Wide Web architecture principles to real-world information management issues faced by commercial, not-for-profit and government enterprises. This book is divided into four sections: Benefits of applying Linked Data principles in enterprise settings, enterprise approval and

support of Linked Data projects, specific Linked Data techniques and a number of real-world success stories from early enterprise adopters. Linking Enterprise Data targets professionals working as CTOs, CIOs, enterprise architects, project managers and application developers in commercial, not-for-profit and government organizations concerned with scalability, flexibility and robustness of information management systems. Computer science graduate students and researchers focusing on enterprise information integration will also benefit.

*Trustworthy Global Computing* Springer Science & Business Media

This book constitutes the proceedings of the International Conference on Information and Communication Technologies held in Kochi, Kerala, India in September 2010.

**iPad 2: The Missing Manual** Peter Lang Incorporated, International Academic Publishers

This book contains the best papers of the International Conference on Advances in Power Electronics and Instrumentation Engineering, PEIE 2010, organized by the Association of Computer Electronics

and Electrical Engineers (ACEEE), during September 7–9, 2010 in Kochi, Kerala, India. PEIE is an international conference integrating two major areas of electrical engineering – power electronics and instrumentation. Thus this conference reflects a continuing effort to increase the dissemination of recent research results among professionals who work in the areas of power electronics, instrumentation and electrical engineering. The program of this joint conference included several outstanding keynote lectures presented by internationally renowned distinguished researchers who are experts in the various PEIE areas. Their keynote speeches have contributed to heightening the overall quality of the program and significance of the theme of the conference. I hope that you will find this collection of the best PEIE 2010 papers an excellent source of inspiration as well as a helpful reference for research in the aforementioned areas. Organizing a conference like this one is not possible without the assistance and continuous support of many people and institutions. I thank Stefan Goeller, Janahanlal Stephen, R Vijay Kumar, and Nussy Thankachan for their constant support and guidance. I would like to express my gratitude to Springer's LNCS-CCIS editorial team, especially Leonie Kunz, for producing such a wonderful proceedings book.

*Jung's Personality Theory Quantified* Springer Science & Business Media

Privacy requirements have an increasing impact on the realization of modern applications. Commercial and legal regulations demand that privacy guarantees be provided whenever sensitive information is stored, processed, or communicated to external parties. Current approaches encrypt sensitive data, thus reducing query execution efficiency and preventing selective information release. *Preserving Privacy in Data Outsourcing* presents a comprehensive approach for protecting highly sensitive information when it is stored on systems that are not under the data owner's control. The approach illustrated combines access control and encryption, enforcing access control via structured encryption. This solution, coupled with efficient algorithms for key derivation and distribution, provides efficient and secure authorization management on outsourced data, allowing the data owner to outsource not only the data but the security policy itself. To reduce the amount of data to be encrypted the book also investigates data fragmentation as a possible way to protect privacy of data associations and provide fragmentation as a complementary means for protecting privacy: associations broken by fragmentation will be visible only to users authorized (by knowing the proper key) to join fragments. The book finally investigates the problem of executing queries over possible data distributed at different servers and which must be controlled to ensure sensitive information and sensitive associations be visible only to parties authorized for that. Case Studies are provided throughout the book. Privacy, data mining, data protection, data outsourcing, electronic commerce, machine learning professionals and others working in these related fields will find this book a valuable asset, as well as primary associations such as ACM, IEEE and Management Science. This book is also suitable for advanced level students and researchers concentrating on computer science as a secondary text or reference book.

*Intensive Interaction* "O'Reilly Media, Inc."

As capital of the European Union, Brussels is home to tens of thousands of civil servants, representatives of businesses, civil society and governments. In order to work in Brussels, you do not need to know everyone, but you do need to know the stakeholders in your area of interest and activity. This second revised and extended edition of stakeholder.eu 2012 lists all of these EU

stakeholders in a comprehensive, well-structured, reliable and userfriendly way.

*Pattern Matching for an Object-oriented and Dynamically Typed Programming Language* Springer  
With iOS 5, Apple added more than 200 new features to the iPad 2, but there's still no printed guide to using all its amazing capabilities. That's where this full-color Missing Manual comes in. You'll learn how to stuff your iPad with media, organize your personal life, wirelessly stream content to and from your tablet, stay connected to friends, and much more. The important stuff you need to know: Build your media library. Fill your iPad with music, movies, TV shows, eBooks, eMagazines, photos, and more. Go wireless. Sync content between your computer and iPad—no wires needed. Get online. Connect through WiFi or Wi-Fi + 3G, and surf the Web using the iPad's new tabbed browser. Consolidate email. Read and send messages from any of your email accounts. Get social. Use built-in apps like iMessage, Twitter, and Ping to stay in touch. Store stuff in iCloud. Stash your content online for free, and sync up all your devices automatically. Interact with your iPad. Learn new finger moves and undocumented tips, tricks, and shortcuts.

**Prophets and Prophecy in Jewish and Early Christian Literature** Springer Science & Business Media

This text presents a theoretical and practical examination of the latest developments in Information Retrieval and their application to existing systems. By starting with a functional discussion of what is needed for an information system, the reader can grasp the scope of information retrieval problems and discover the tools to resolve them. The book takes a system approach to explore every functional processing step in a system from ingest of an item to be indexed to displaying results, showing how implementation decisions add to the information retrieval goal, and thus providing the user with the needed outcome, while minimizing their resources to obtain those results. The text stresses the current migration of information retrieval from just textual to multimedia, expounding upon multimedia search, retrieval and display, as well as classic and new textual techniques. It also introduces developments in hardware, and more importantly, search architectures, such as those introduced by Google, in order to approach scalability issues. About this textbook: A first course text for advanced level courses, providing a survey of information retrieval system theory and architecture, complete with challenging exercises Approaches information retrieval from a practical systems view in order for the reader to grasp both scope and solutions Features what is achievable using existing technologies and investigates what deficiencies warrant additional exploration  
*Preserving Privacy in Data Outsourcing* Springer Science & Business Media

*Jung's Personality Theory Quantified* fills an urgent need for professionals using the Myers-Briggs Type Indicator® (MBTI) to map it on to the cognitive modes of Jung's personality theory, avoiding potential logical errors in the traditional "type dynamics" method. It furthers Jung's original concepts while placing them on a solid axiomatic basis not possessed by other personality theories. Bringing these quantitative findings to the millions of MBTI users – managers, consultants, counsellors, teachers, psychoanalysts and human resource professionals – will require further education of those already certified to administer the instrument according to type dynamics. For this reason numerical exercises follow most chapters to make the book a source reference for briefer workbooks usable in enhanced certification programs. Backed by quantitative theory and new graphical methods, the pioneering qualitative typology work of Myers and Briggs is thus extended to yield deeper

understanding of the vital topics of human personality, creativity and human relations. Jungian psychoanalysts may find Jung's Personality Theory Quantified helpful in organizing complicated clinical information and it can also enhance the work of MBTI practitioners worldwide.

*International QRP Collection* Springer Science & Business Media

This comprehensive handbook, written by leading experts in the field, details the groundbreaking research conducted under the breakthrough GALE program--The Global Autonomous Language Exploitation within the Defense Advanced Research Projects Agency (DARPA), while placing it in the context of previous research in the fields of natural language and signal processing, artificial intelligence and machine translation. The most fundamental contrast between GALE and its predecessor programs was its holistic integration of previously separate or sequential processes. In earlier language research programs, each of the individual processes was performed separately and sequentially: speech recognition, language recognition, transcription, translation, and content summarization. The GALE program employed a distinctly new approach by executing these processes simultaneously. Speech and language recognition algorithms now aid translation and transcription processes and vice versa. This combination of previously distinct processes has produced significant research and performance breakthroughs and has fundamentally changed the natural language processing and machine translation fields. This comprehensive handbook provides an exhaustive exploration into these latest technologies in natural language, speech and signal processing, and machine translation, providing researchers, practitioners and students with an authoritative reference on the topic.

*Collaboration and Technology* Springer Science & Business Media

Nathan G. Jennings's captivating study explores the ascetical logic of the various practices that Christians call theology. By establishing ascetic practice as coherent within the logic of Christian thought, Jennings argues that Christian theology itself, as an embodied Christian practice, is a type of and participant in Christian asceticism. Jennings establishes that the implications of such an understanding of Christian theology can be brought to bear on modern Christian scholarship in profound and transformative ways. With engagements and references that span a vast terrain from Patristic authors to modern systematic theologians, *Theology as Ascetic Act: Disciplining Christian Discourse* is a significant contribution to both modern Christian thought and the study of asceticism.

**HF Antennas for Everyone** SAGE

Papers based on a conference held October 2006, Babeş-Bolyai University in Cluj.

**Information and Communication Technologies** Universitätsverlag Potsdam

Through a collection of essays in metaphysics, epistemology and ethics, this book explores the evolution of the idea of the One and Many. Since Parmenides' dichotomy of One and Many, the One of the ancient cosmogonies has been reduced to a pole of our thought, a sterile identity which has been identified with truth but cannot bring forth nor give order to the Many. The author reflects on how the Parmenidean dichotomy has led, for many centuries after Parmenides, to the metaphysical attempts to reduce the Many to the One, causing unsolvable epistemological problems, and to the metaphysical dissolution of the One in the Many of time, causing the moral crisis of the West. Further, this study analyses the epistemic and spiritual impasse of the West and shows a possible solution to this problem: to unearth the forgotten dichotomy, the key to understand millenarian

philosophical problems, such as consciousness, movement and causality, which are deadlocked because they all stem from the reduction of temporal phenomena within the framework of a rational thought which is unable to account for the non-identical.

**Amateur Radio Astronomy** Peter Lang

This book constitutes the proceedings of the 16th Collaboration Researchers' International Working Group Conference on Collaboration and Technology, held in Maastricht, The Netherlands, in September 2010. The 27 revised papers presented were carefully reviewed and selected from numerous submissions. They are grouped into seven themes that represent current areas of interest in groupware research: knowledge elicitation, construction and structuring, collaboration and decision making, collaborative development, awareness, support for groupware design, social networking and mobile collaboration.

Orphans of the One Or the Deception of the Immanence Springer Science & Business Media

Global computing refers to computation over "global computers," i.e., computational infrastructures available globally and able to provide uniform services with variable guarantees for communication, cooperation and mobility, resource usage, security policies and mechanisms, etc., with particular regard to exploring their universal scale and the programmability of their services. As the scope and computational power of such global infrastructures continue to grow, it comes more and more important to develop methods, theories and techniques for trustworthy systems running on global computers. This book constitutes the thoroughly refereed proceedings of the 7th edition of the International Symposium on Trustworthy Global Computing (TGC 2010) that was held in Munich, Germany, February 24-26, 2010. The Symposium on Trustworthy Global Computing is an international annual venue dedicated to safe and reliable computation in global computers. It focuses on providing frameworks, tools, and protocols for constructing well-behaved applications and on reasoning rigorously about their behavior and properties. The related models of computation incorporate code and data mobility over distributed networks with highly dynamic topologies and heterogeneous devices.

Life System Modeling and Intelligent Computing Springer

In *Subjectivity of 'Différance'*, Heecheon Jeon carefully explores the question of living well together in the midst of myriad differences and otherness in our living world. Living well together is not a concept void of naïve togetherness of various subjectivities, but rather the disclosure of the repressive subjectivity to welcome «strangers to ourselves» by sacrificing the very subjectivity. To this end, Jeon not only delves into the deconstruction of subjectivity, but also searches for poetic possibilities of subjectivity without the subject for living well together in Jacques Derrida, Martin Heidegger, Emmanuel Levinas, and Alain Badiou: ethical responsibility, political enunciation, cultural supplementarity, and theological imagination. Beyond the deconstructive critique of metaphysical subjectivity, the possibility of subjectivity without the subject must be investigated in terms of multifaceted aspects of our living together: subjectum, Deus, and communitas. Jeon insists that deconstruction radically commands us to say salut! to the Other at the brink of a democracy to come.

Shortwave DX Handbook

The 2010 International Conference on Life System Modeling and Simulation (LSMS 2010) and the

2010 International Conference on Intelligent Computing for Sustainable Energy and Environment (ICSEE 2010) were formed to bring together researchers and practitioners in the fields of life system modeling/simulation and intelligent computing applied to worldwide sustainable energy and environmental applications. A life system is a broad concept, covering both micro and macro components ranging from cells, tissues and organs across to organisms and ecological niches. To comprehend and predict the complex behavior of even a simple life system can be extremely difficult using conventional approaches. To meet this challenge, a variety of new theories and methodologies have emerged in recent years on life system modeling and simulation. Along with improved understanding of the behavior of biological systems, novel intelligent computing paradigms and techniques have emerged to handle complicated real-world problems and applications. In particular, intelligent computing approaches have been valuable in the design and development of systems and facilities for achieving sustainable energy and a sustainable environment, the two most challenging issues currently facing humanity. The two LSMS 2010 and ICSEE 2010 conferences served as an important platform for synergizing these two research streams.

#### Handbook of Natural Language Processing and Machine Translation

A typical characterization of EuroSPI is reflected in a statement made by a company: ". . . the biggest value of EuroSPI lies in its function as a European knowledge and experience exchange mechanism for SPI and innovation." Since its beginning in 1994 in Dublin, the EuroSPI initiative has outlined that there is not a single silver bullet to solve SPI issues, but that you need to understand a combination of different SPI methods and approaches to achieve concrete benefits. The fore each proceedings volume covers a variety of different topics, and at the conference we discuss potential synergies and the combined use of such methods and approaches. These proceedings contain selected research papers for five topics: Section I: SPI Tools Section II: SPI Methods Section III: SPI in SMEs Section IV: Economic Aspects of SPI Section V: The Future of SPI Section I presents studies on SPI tools. The authors provide an insight into new tools which can be used for SPI. Willem Bekkers et al. present a new assessment method and tool for software product management. Ismael Edrei-Espinosa-Curiel et al. illustrate a graphical approach to support the teaching of SPI. Paul Clarke and coworkers deal with an analysis and a tool to help real adoption of standards like ISO 12207 and they focus on SPI implementation and practices. Esparanca Amengual et al. present a new team-based assessment

method and tool.

#### Systems, Software and Services Process Improvement

Pattern matching is a well-established concept in the functional programming community. It provides the means for concisely identifying and deconstructing values of interest. This enables a clean separation of data structures and respective functionality, as well as dispatching functionality based on more than a single value. Unfortunately, expressive pattern matching facilities are seldomly incorporated in present object-oriented programming languages. We present a seamless integration of pattern matching facilities in an object-oriented and dynamically typed programming language: Newspeak. We describe language extensions to improve the practicability and integrate our additions with the existing programming environment for Newspeak. This report is based on the first author's master's thesis.

#### Theology as Ascetic Act

Intensive Interaction is an approach to teaching the fundamentals of communication to children and adults who have severe learning difficulties or autism, and who are still at an early stage of communication development. Its simplicity and effectiveness has been one of the major themes in the widespread practitioner dissemination that has taken place during the last twenty years. Despite the human simplicity of the approach, intensive interaction relates to, or is influenced in practice by, a wide range of interconnecting theories and academic standpoints. With contributions from leading authorities, Dave Hewett provides a comprehensive and detailed description of the theoretical landscape of a now established methodology. The most prominent related theories and issues are reviewed, with Intensive Interaction set within their contexts. Issues covered include: - the approach within education and the curriculum - intensive interaction within adult services - effects on organisational change and development - neurology and learning outcomes - intensive Interaction and the Central Triad of autism - emotional learning and development outcomes - adoption of Intensive Interaction Providing a timely theoretical and academic overview to Intensive Interaction practice, this book marks a substantial theoretical waypoint to future development of interactive approaches generally. It is a vital resource of in-depth knowledge for anyone studying Special Educational Needs and Education. Dave Hewett is an independent educational consultant and has published widely on Intensive Interaction since his role in its development.
