Why Eat Green Cucumbers at the Time of Dying? UN  
 The UN E-Government Survey 2008: From E-Government to Connected Governance assesses the e-government readiness of the 192 Member States of the UN according to a quantitative composite index of e-readiness based on website assessment, telecommunication infrastructure, and human resource

endowment. ICTs can help reinvent government in such a way that existing institutional arrangements can be restructured and new innovative arrangements can flourish, paving the way for a transformed government. The focus of the report this year, in Part 2, is e-government initiatives directed at improving operational efficiency through the integration of back-office functions. Whilst such initiatives, if successful, will deliver benefits to citizens, the primary purpose is to improve the effectiveness of government and governmental agencies. Models of back-office integration, irrespective of the delivery mode, fall into three broad categories: single function integration, cross functional integration, and back-office to front-office integration. The level of complexity, expressed in terms of the number of functions within the scope and number of organizations involved, is the primary factor influencing a successful outcome - with a tendency amongst the more ambitious projects to fail to deliver the full anticipated benefits. The key variables involved in the delivery of back-office integration are the people, processes and technology required. Whilst the technology is increasingly resilient and 'fit for purpose', the evidence indicates that success or failure is less a technological issue and more a people issue - in particular, the ability to change public service cultures and motivate public sector workers to new ways of working, address trade union concerns, and provide adequately skilled and competent management

Hypertension remains the leading cause of cardiovascular morbidity and mortality in spite of current medical therapies. It has been estimated that 50% of Western civilization has hypertension and approximately 20% of patients have resistant hypertension. Renal denervation (RDN) is a minimally invasive, endovascular catheter based procedure using radiofrequency ablation aimed at treating resistant hypertension. Early studies show a high degree of effectiveness in renal denervation to treat hypertension. This book examines renal pathophysiology and the rationale for renal denervation, as well as possible long term benefits and risks of this new therapy. The myriad of devices involved in the evolution of this therapy are discussed and the book concludes with analyses of the cost effectiveness and future applications.

"Myths and Fictions" - the third in a series of books on comparative philosophy and religion - is a collection of original essays, none previously published, on the theory and the actuality of myths and fictions in the different cultures of the world. Through all the essays there runs the question of the relation of literal truth to truth conceived in other ways or dimensions. Taken as a whole, the book makes a serious attempt to get beyond the confines of any single culture and enter into the mythical imagination of the ancient Hindus, Chinese, Hebrews and Christians, and by this act of imagination to escape (in Italo Calvino's words) "the limited perspective of the individual ego, not only to enter into selves like our own but to give speech to that which has no language..."

A tour through the groundbreaking science behind the enigmatic, but crucial, brain developments of adolescence and how those translate into teenage behavior The brain creates every feeling, emotion, and desire we experience, and stores every one of our memories. And yet, until very recently, scientists believed our brains were fully developed from childhood on. Now, thanks to imaging technology that enables us to look inside the living human brain at all ages, we know that this isn't so. Professor Sarah-Jayne Blakemore, one of the world's leading researchers into adolescent neurology, explains precisely what is going on in the complex and fascinating brains of teenagers -- namely that the brain goes on developing and changing right through adolescence--with profound implications for the adults these young people will become. Drawing from cutting-edge research, including her own, Blakemore shows: How an adolescent brain differs from those of children and adults Why problem-free kids can turn into challenging teens What drives the excessive risk-taking and all-consuming relationships common among teenagers And why many mental illnesses -- depression, addiction, schizophrenia -- present during these formative years Blakemore's discoveries have transformed our understanding of the teenage mind, with consequences for law, education policy and practice, and, most of all, parents.

Data storage, processing, and management at remote location over dynamic networks is the most challenging task in cloud networks. Users' expectations are very high for data accuracy, reliability, accessibility, and availability in pervasive cloud environment. It was the core motivation for the Cloud Networks Internet of Things (CNIoT). The exponential growth of the networks and data management in CNIoT must be implemented in fast growing service sectors such as logistic and enterprise management. The network based IoT works as a bridge to fill the gap between IT and cloud networks, where data is easily accessible and available. This book provides a framework for the next generation of cloud networks, which is the emerging part of 5G partnership projects. This contributed book has following salient features, A cloud-based next generation networking technologies. Cloud-based IoT and mobility management technology. The proposed book is a reference for research scholars and course supplement for cloud-IoT related subjects such as distributed networks in computer/ electrical engineering. The Holy Science is a book of theology written by Swami Sri Yukteswar Giri in 1894. The text provides a close comparison of parts of the Christian Bible to the Hindu Upanishads, meant "to show as clearly as possible that there is an essential unity in all religions...and that there is but one Goal admitted by all scriptures." Swami Sri Yukteswar Giri was born Priya Nath Karar in 1855 to a wealthy family. As a young man, he was a brilliant student of math and science, astrology and astronomy. He joined a Christian missionary school where he studied the Bible and later spent two years in medical school. After completing his formal education, Priya Nath married and had a daughter. But he continued his intellectual and spiritual pursuits, depending on the income from his property to support himself and his family. After the death of his wife, he entered the monastic Swami order and became Sri Yukteswar Giri, before becoming a disciple of famed guru Lahiri Mahasaya, known for his revitalization of Kriya Yoga. Then in 1894, Sri Yukteswar Giri met Mahavatar Babaji, an ageless wise man who is said to have lived for untold hundreds of years. At this meeting, Mahavatar Babaji gave Sri Yukteswar the title of Swami, and asked him to write this book comparing Hindu scriptures and the Christian Bible. Swami Sri Yukteswar obeyed. He also founded two ashrams, including one in his ancestral

home. He lived simply as a swami and yogi, devoted to disciplining his body and mind, and thus to liberating his soul. Among his disciples was Paramahansa Yogananda, credited with bringing yoga and meditation to millions of Westerners. The Holy Science consists of four chapters. The first is titled "The Gospel," and is intended to "establish the fundamental truth of creation." Next is "The Goal," which discusses the three things all creatures are seeking: "Existence, Consciousness, and Bliss." Chapter three, "The Procedure," is the most practical of the sections. It describes the natural way to live for purity and health of body and mind. The final chapter is called "The Revelation," and discusses the end of the path for those who are near the "three ideals of life." Swami Sri Yukteswar also displays his impressive knowledge and understanding of astrology by proposing his theory of the Yuga Cycle. Each yuga is an age of the world that tracks the movement of the sun, Earth, and planets. Each age represents a different state of humanity. There are four yugas: - Satya Yuga is the highest and most enlightened age of truth and perfection. - Treta Yuga is the age of thought and is more spiritually advanced than Dwapara Yuga and Kali Yuga. - Dwapara Yuga is an energetic age, although not a wise one. During this yuga, people are often self-serving and greedy. The age is marked by war and disease. - Kali Yuga is the age of darkness, ignorance, and materialism. This is the least evolved age. Today, The Holy Science is highly respected among those seeking to understand the relationships between world religions and cultures. While some still believe that we are in Kali Yuga, many others believe that Swami Sri Yukteswar was accurate, and that his calculations correct previous errors that artificially inflated the length of the Yuga Cycle.

The processes by which women living in rural areas of Nepal acquire literacy and deploy it for their own purposes were examined in an exploration of the diverse perspectives of policymakers, fieldworkers, and participants in gender, literacy, and development. The study combined ethnography with a research methodology called participatory rural appraisal (PRA), which began as a development planning methodology based on an empowering process that allows all people, including weaker and poorer people, to collate, present, and analyze information. The following were among the issues explored: approaches to

women's literacy in Nepal; language policy in literacy programs; nongovernmental organizations versus the classroom; gender and language policy; new versus old approaches to literacy and numeracy teaching; and the role of literacy in development ideologies. The study documented how factors outside literacy classrooms, including facilitators' educational background and local concepts about education, necessitate adapting literacy practices developed in the West to the specific social contexts of rural areas in developing countries. The following are among the items in the 13 appendixes: a map of the case study areas; examples of PRA activities conducted during fieldwork; who's who in HIL (Health Is Life) and Save; notes on the Nepali caste system; HIL lesson sheet (English name writing method); Kosalee mathematics; HIL mathematics sheets; record forms to be completed by Save women's groups every month; and an example of a Save USA funding proposal.
