«Таинственный сад» – любимая классика для читателей всех возрастов, жемчужина творчества Фрэнсис Ходжсон Бернетт, роман о заново открытой радости жизни и магии силы. Мэри Леннокс, жестокое и испорченное дитя высшего света, потеряв родителей в Индии, возвращается в Англию, на воспитание к дяде-затворнику в его поместье. Однако дядя находится в постоянных отъездах, и Мэри начинает исследовать округу, в ходе чего делает много открытий, в том числе находит удивительный маленький сад, огороженный стеной, вход в который почему-то запрещен. Отыскав ключ и потайную дверцу, девочка попадает внутрь. Но чьи тайны хранит этот загадочный садик? И нужно ли знать то, что

находится под запретом?.. Впрочем, это не единственный секрет в поместье...

Dynamics of the Pantanal Wetland in South America Lippincott Williams & Wilkins

This book contributes to the growing body of work addressing the processes and consequences of national governments' audits of the performance of higher education institutions (HEIs) in different countries. The book discusses one recent area of focus within these audits, namely the measurement of universities' societal and economic impact. The Research Impact Agenda offers a problematisation of the research impact agenda, especially in relation to the impact generated by academics based in schools of business and management. It scrutinises the often unintended but nevertheless significant consequences of this agenda for individuals and higher education institutions, such as the reproduction of existing inequalities in academia and the crowding out of other key activities of business schools. It puts forward a range of recommendations for researchers, policymakers, university and business school leaders, and individual academics. The book will be of interest to a wide range of readers - regardless of their formal position, organisational affiliation or career stage - who consider it important to reduce and remove inequalities and inequities within the HE sector and to make universities and business schools

more inclusive. The readers will benefit from the opportunity to engage in reflection aimed at transforming the current framing, delivery and assessment of business and management research impact.

[Imaging in Rheumatology: A Clinical Approach](#) is ideal for radiologists and rheumatologists—as well as orthopedic surgeons and others interested in applying imaging to rheumatologic diseases—and stresses conventional radiography as the most effective imaging assessment technique to help diagnose various diseases and conditions. Greenspan and Gershwin—a radiologist and rheumatologist, respectively—focus on practical, everyday use, so you can apply knowledge you learn in any clinical setting.

[Dietary Reference Intakes for Water, Potassium, Sodium, Chloride, and Sulfate](#) The Dietary Reference Intakes (DRIs) are quantitative estimates of nutrient intakes to be used for planning and assessing diets for healthy people. This new report, the sixth in a series of reports presenting

dietary reference values for the intakes of nutrients by Americans and Canadians, establishes nutrient recommendations on water, potassium, and salt for health maintenance and the reduction of chronic disease risk. Dietary Reference Intakes for Water, Potassium, Sodium, Chloride, and Sulfate discusses in detail the role of water, potassium, salt, chloride, and sulfate in human physiology and health. The major findings in this book include the establishment of Adequate Intakes for total water (drinking water, beverages, and food), potassium, sodium, and chloride and the establishment of Tolerable Upper Intake levels for sodium and chloride. The book makes research recommendations for information needed to advance the understanding of human requirements for water and electrolytes, as well as adverse effects associated with the intake of excessive amounts of water, sodium, chloride, potassium, and sulfate. This book will be an invaluable reference for nutritionists, nutrition researchers, and food manufacturers.

Polymers are ubiquitous and pervasive in industry, science, and technology. These giant molecules have great significance not only in terms of products such as plastics, films, elastomers, fibers, adhesives, and coatings but also less obviously though none the less importantly in many leading industries (aerospace, electronics, automotive, biomedical, etc.). Well over half the chemists and chemical engineers who graduate in the United States will at some time work in the polymer industries. If the professionals working with polymers in the other industries are taken into account, the overall number swells to a much greater total. It is obvious that knowledge and understanding of polymers is essential for any engineer or scientist whose professional activities involve them with these macromolecules. Not too long ago, formal education relating to polymers was very limited, indeed, almost nonexistent. Speaking from a personal viewpoint, I can recall my first job after completing my Ph.D. The job with E.I. Du Pont de Nemours dealt with polymers, an area in which I had no university training. There were no courses in polymers offered at my alma mater. My experience, incidentally, was the rule and not the exception.

This report presents the recommendations of the WHO Expert Committee responsible for updating the WHO Model List of Essential Medicines. The first part contains a progress report on the new procedures for updating the Model List and the development of the WHO Essential Medicines Library. It continues with a section on changes made in revising the Model List followed by a review of some sections such as hypertensive medicines and fast track procedures for deleting items. Annexes include the 13th version of the Model List and items on the list sorted according to their 5-level Anatomical Therapeutic Chemical classification codes.

Public transportation is in crisis. Through an assessment of the history of automobility in North America, the “three revolutions” in automotive transportation, as well as the current work of committed people advocating for a different way forward, James Wilt imagines what public transit should look like in order to be green and equitable. Wilt considers environment and climate change, economic and racial inequality, urban density, accessibility and safety, work and labour unions, privacy and control of personal data, as well as the importance of public and democratic decision-making. Based on interviews with more than forty experts, including community activists, academics, transit planners, authors, and journalists, *Do Androids Dream of Electric Cars?* explores our ability to exert power over how cities are built and for whom.

Everyday Literacies in Africa: Ethnographic Studies of Literacy and Numeracy Practices in Ethiopia is a product of Learning for Empowerment Through Training in Ethnographic Research (LETTER) programme conducted in Ethiopia. It outlines the story of a journey towards a clearer and more focused understanding of what literacy and numeracy mean. LETTER was intended to build more effective learning programmes for adults who wish to develop their literacy and numeracy skills and practices, through designing better learning programmes, preparing more relevant teaching-learning materials and training literacy instructors. This approach was designed on the understanding that adults learn differently from children mainly because adults bring to their learning a great deal of experience and knowledge. It is from this knowledge that facilitators must

start.

“In this remarkable new cookbook, Bergo provides stories, photographs and inventive recipes.”—Star Tribune As Seen on NBC’s The Today Show! “With a passion for bringing a taste of the wild to the table, [Bergo’s] inspiration for experimentation shows in his inventive dishes created around ingredients found in his own backyard.”—Tastemade From root to flower—and featuring 180 recipes and over 230 of the author’s own beautiful photographs—explore the edible plants we find all around us with the Forager Chef Alan Bergo as he breaks new culinary ground! In *The Forager Chef’s Book of Flora* you’ll find the exotic to the familiar—from Ramp Leaf Dumplings to Spruce Tip Panna Cotta to Crisp Fiddlehead Pickles—with Chef Bergo’s unique blend of easy-to-follow instruction and out-of-this-world inspiration. Over the past fifteen years, Minnesota chef Alan Bergo has become one of America’s most exciting and resourceful culinary voices, with millions seeking his guidance through his wildly popular website and video tutorials. Bergo’s inventive culinary style is defined by his encyclopedic curiosity, and his abiding, root-to-flower passion for both wild and cultivated plants. Instead of waiting for fall squash to ripen, Bergo eagerly harvests their early shoots, flowers, and young greens—taking a holistic approach to cooking with all parts of the plant, and discovering extraordinary new flavors and textures along the way. *The Forager Chef’s Book of Flora* demonstrates how understanding the different properties and growing phases of roots, stems, leaves, and seeds can inform your preparation of something like the head of an immature sunflower—as well as the lesser-used parts of common vegetables, like broccoli or eggplant. As a society, we’ve forgotten this type of old-school knowledge, including many brilliant culinary techniques that were borne of thrift and necessity. For our own sake, and that of our planet, it’s time we remembered. And in the process, we can unlock new flavors from the abundant landscape around us. “[An] excellent debut. . . . Advocating that plants are edible in their entirety is one thing, but this [book] delivers the delectable means to prove it.”—Publishers Weekly “Alan Bergo was foraging in the Midwest way before it was trendy.”—Outside Magazine

This book provides readers with in-depth insights into the changes in the Pantanal wetland from its formation to the actual and likely future states. It reveals that today’s Pantanal is an evolutionary consequence of geological, ecological and, more recently, man-made events taking place at distinct space-time intervals. Topics include geotectonics and sun-earth interactions, which largely dictate the rate of drastic changes that eventually disrupt ecological stability and radically rebuild the regional landscape. Furthermore, the biota-climate system is discussed as a major driver reshaping the ecohydrology functioning of the landscape on an intermediate timescale. Also covered are major changes in the landscape ecohydrology and biodiversity due to recent land-use and climate changes induced by humankind in the Anthropocene. The ability to recognize how those temporal scales impact the Pantanal wetland provides the opportunity for wise management approaches and the sustainable development of the region.

When Bloomberg News invited the young American journalist Alex Cuadros to report on Brazil’s emerging class of billionaires at the height of the historic Brazilian boom, he was poised to cover two of the biggest business stories of our time: how the giants of the developing world were taking their place at the center of global capitalism, and how wealth inequality was changing societies everywhere. The billionaires of Brazil and their massive fortunes resided at the very top of their country’s economic pyramid, and whether they quietly accumulated exceptional power or extravagantly displayed their decadence, they formed a potent microcosm of the world’s richest .001 percent. They held sway over the economy, government, media, and stewardship of the environment; they determined the spiritual fates and populated the imaginations of their countrymen. In 2012, Eike Batista ranked as the eighth-richest person in the world, was famous for his marriage to a beauty queen, and was a fixture in the Brazilian press. But by 2015, Batista was bankrupt, his son Thor had been indicted for manslaughter, and Brazil—its president facing impeachment, its provinces combating an epidemic, and its business and political class torn apart by scandal—had become a cautionary tale of a country run aground by its elites. Over four years, Cuadros reported on media moguls and televangelists, energy barons and shadowy figures from the years of military dictatorship, soy barons who lived on the outskirts of the Amazon, and new-economy billionaires spinning money from speculation. His zealous reporting takes us from penthouses to courtrooms, from favelas to art fairs, from scenes of unimaginable wealth to desperate, massive street protests. Within a business narrative that deftly dramatized the volatility of the global economy, Cuadros offers us literary journalism with a grand sweep.—Adapted from dust jacket.
