In May, 1539, a young, German mathematician named Georg Joachim Rheticus traveled hundreds of miles across Europe in the hopes of meeting and spending a few days with the legendary astronomer, Nicolas Copernicus, in Frombork, Poland. Two and a half years later, Rheticus was still there, fascinated by what he was discovering, but largely engaged in trying to convince Copernicus to publish his masterwork-De revolutionibus (On the Revolutions of the Heavens), the first book to posit that the sun was the center of the universe. That he was finally able to do so just as Copernicus was dying became a turning point for science and civilization. That he then went on to a legendary career of his own-he founded the field of trigonometry, for example-will be one of the many surprises in this eye-opening book, which will restore Rheticus to his rightful place in the history of

science.

Teachers, students, and amateur artists will all benefit from the advice of this esteemed educator and fine artist whose book, as described by a colleague, is "a cause célèbre for art education, not only because it meets the urgent professional need, but also because it combines artistic, aesthetic, and instructional considerations in a way which is significantly different from any other text." Encouraging teachers and students to use his suggestions in ways they feel most appropriate, the author (an expert guide and teacher) offers sound advice on methods and techniques for artists at all levels. Using the lessons and methods he employed over the years as an instructor, Kaupelis focuses on solving the problems common to many illustrators, among them successfully developing perspective, contour and modeled drawing, and drawing from memory and projected images. A splendid blend of instruction, analysis, and insights, this volume—one of the most widely read art instruction texts—deserves a place on the shelves of instructors and serious students of art.

Peter Kuper (b. 1958) is one of the country's leading cartoonists. His artwork has graced the pages and covers of numerous newspapers and magazines, including Time, the New Yorker, Mother Jones, and the New York Times. He is a longtime contributor to Mad magazine, where he has been writing and drawing Spy vs. Spy for two decades, and the cofounder and coeditor of World War 3 Illustrated, the cutting-edge magazine devoted to political graphic art. Most of the interviews collected here are either previously unpublished or long out of print. They address such varied topics as world travels, teaching at Harvard, Hollywood deal-making, climate change, Spy vs. Spy, New York City in the 1970s and 1980s, and World War 3 Illustrated. Among the works examined are his books The System, Sticks and Stones, Stop Forgetting to Remember, Diario de Oaxaca, and adaptations of Franz Kafka's The Metamorphosis and Upton Sinclair's The Jungle. Kuper also discusses his graphic novel Ruins, which received the Eisner Award for Best New Graphic Novel in 2016. Along with two dozen images, this volume features ten lively, informative interviews as well as a quartet of revealing conversations, conducted in collaboration with Kuper's fellow artist Seth Tobocman, with underground comix legends Robert Crumb and Vaughn Bodé, Mad magazine publisher William Gaines, and Jack Kirby.

[Ella Fitzgerald](#) Bloomsbury Publishing USA

This book is designed to help biologists who must create their own illustrations and artists who are confronted with unfamiliar biological subjects. The author, an experienced biological illustrator, gives practical instructions and advice on the consideration of size and of printing processes, choice of materials, methods for saving time and labor, drawing techniques, lettering methods, and mounting and packing the finished illustrations. She explains how to produce clear and attractive charts, graphs, and maps, so essential to science publications. Though this primer does not cover photographic techniques, it does include advice on retouching, cropping, and mounting photographs and on using photographs of biological subjects as aids in drawing. This second edition is updated to reflect the many technological changes in art materials and printing processes that have occurred since the book's first publication, and it includes an entirely new chapter on planning, designing, and mounting the poster presentations that have become an essential part of conferences held by scientific societies. Also included are the requirements and conventions peculiar to biological illustration and a bibliography of useful reference works. "Every biology student who intends to write a thesis deserves to own this book, as does the biologist who intends to publish or work up some visual aids for his own use. There is no reason to limit the concepts of this handbook to the field of biology; it should be useful to other specific areas of science."—Evan Lindquist, American Biology Teacher (from a review of the first edition)
