### The Guide to Occupational Therapy Practice Routledge

Currently in the United States, 20% of children ages 6 years or younger live in poverty. Poor children have fewer opportunities than their peers to resources that are important for child development. At the same time, the prevalence of developmental disabilities has increased to 1 in every 6 children. Early identification of developmental delays is critical, and more than half of all American parents do not know the warning signs. Occupational therapy professionals in early intervention and preschool practice can provide the necessary services to support children's health in early childhood. This Practice Guideline explains the occupational therapy process for young children--and their families, caregivers, and teachers--which includes evaluation, intervention, and outcomes planning to enhance a child's occupational performance, adaptation, health and wellness, community participation, role competence, and self-advocacy. Topics include social-emotional development; feeding, eating, and swallowing; cognitive and motor development; service delivery; autism; obesity, cerebral palsy; and parent training. This work can help occupational therapy practitioners, as well as those who manage, reimburse, or set policy regarding occupational therapy services, understand the contribution of occupational therapy in evaluating and serving young children. This guideline can also serve as a resource for parents, school administrators, educators, and other early childhood staff.

American Occupational Therapy Association, Incorporated

A landmark publication in occupational therapy and a significant contribution to the rehabilitation theory literature! The Kawa Model presents a new conceptual model of practice that differs from contemporary theories in regard to: origin (East Asia), underlying philosophical base (East Asia), being heavily infused with a natural-ecological, holistic world view, and relational structure. The model is based on the metaphor of nature (a river) that stands for the meanings of life. Because of the familiarity of the metaphor, to both therapists and clients alike, the Kawa Model is relatively easy to comprehend, remarkably simple, yet comprehensive and effective. Unlike other models, it was raised from clinical practice, by practitioners, through a process of qualitative research methods. It is the first conceptual model and substantial theoretical work of occupational therapy

from outside of the Western world. A 'must-read' for all students of occupational therapy The first substantial work in occupational therapy from outside of the Western world Introduces an Eastern perspective on matters of theory and culture in occupational therapy Eight case studies, four from Western practice contexts and four from the East Developed by clinicians and practitioners for their peers Questions the cultural boundaries of occupational therapy, its knowledge (epistemology), theory and practice. It puts the reader in touch with the cultural nature of self, client and profession Enables readers to develop critical analysis skills for examining matters of theory and culture, as opposed to learning theory as 'recipes'

This challenging and innovative book explores the political aspects of occupational therapy. It looks at how practitioners may develop political awareness in order to aid community development. A Political Practice of Occupational Therapy is about maximizing the potential impact of occupational therapists' engagements and ensuring the profession is working towards the construction of a civic society. It is supported by twelve chapters of practice examples from the UK, US, Georgia and Australia, as well as a history of the profession as an agency for social change. It asks: How is it possible to introduce the political into a profession that is linked to health and social care? What form could political practice take, and how could the political components of practice be analyzed and evaluated? It includes significant theoretical chapters on gender, class and sexuality, challenges to holism, occupational literacy, and a discussion of political competence. This book will be of particular use for students exploring community and emerging role settings, client centred practice, occupational and social justice and the theoretical base of the profession. From an editorial team that is widely recognized for their challenges to traditional thought and practice in occupational therapy, this book will be of value not just to occupational therapists but also those employed in health profession management and development, and community based rehabilitation.
