The Mountaineers Books Paddling Long Island is

the only book on the market to depict routes and destinations across the whole of Long Island and the New York City area. And it showcases 50 of the very best. It is a diverse selection, too. After all, according to skill level, weather, personal mood, and other factors, a paddler may want open, fast water one day, but a quiet, protected experience at another time, and something in-between later on. It's all here, from New York City to the far eastern tip of Long Island's Montauk

Point. What's more, the book's guidance and language are geared to wide-ranging skill levels: the novice will be enlightened and encouraged, and the seasoned kayaker or canoeist will be engaged and engrossed. That is because the author's intimate, lifelong knowledge of the area's waterways shines in his descriptions of natural and social histories, humorous stories, personal anecdotes, and beautiful black-and-white photographs. In addition,

the author provides contact information on local paddling clubs, outfitters, and Internet links. And a final extensive section on personal safety, boat and equipment preparedness, and related topics makes this book an invaluable tool.

Thousands heeded Deep Trouble's tales of tragedy; but even with the benefits of evolving technology and more safety options, kayakers still fall prey to human error. To renew the cautious attitude of seasoned paddlers and to instill safe practices in kayaking newbies, Sea Kayaker's More Deep Trouble presents more stories of kayaking trials, rescues, and tragedy. In

these 29 stories collected from Sea Kayaker magazine, survivors and witnesses tell of their experiences with the dangers and risks of kayaking. You will feel the cold rush of water when paddlers fall in, the panic they feel when they do not know how to rescue themselves, and the anxiousness of loved ones waiting to hear any news. You will learn how whale watching could cost you your life, how life-saving electronics are only as good as the batteries you have in them, and how a

float plan can initiate a timely search and rescue. End-of-story Lessons Learned summaries suggest what to do if you find yourself in similar unfortunate situations. Read these tales, understand the lessons learned in these incidents, and respect the advice given as you take your next kayaking adventure. This tome of danger and survival may ultimately save your life.

Hawaiians were stand-up

paddle surfing (known as SUP), in the 50's and e60's, but the sport was first seen on the US mainland in the early 2000s, when surfers Laird Hamilton and Rick Thomas brought it to California. Macmillan

In *Sea Kayaking*, , comprehensive guide for those who travel the open waters in the Southern Hemisphere, Philip Woodhouse, Australian paddler and Royal Australian Air Force

veteran, shares his years of experience, technical training, and military teaching skills. What began as a personal reference was soon developed as a training manual, recommended by the Victorian Sea Kayak Club to its members and East Coast Kayaking to their patrons and Australian Canoeing students. Sea Kayaking covers boat design, kit requirements, paddling skills, health and well-being, meteorology, the ocean environment, navigation,

communications, conservation and minimal-impact camping, conservation, seamanship, electrical bilge pumps, solar panels, light sources, boat repairs, leadership, risk management, basic safety and survival strategies, as well as a brief overview about the history and various types of canoeing.. There is also a comprehensive glossary to assist the reader in understanding the terms and concepts discussed in the main text. Woodhouses work differs

from most manuals about sea kayaking in that it is written from the perspective of someone who paddles the Southern Hemisphere. As such, the major differences between the two hemispheres weather patterns, navigation, laws, and terminology are discussed, as well as compared to their Northern Hemisphere counterparts. In the end, paddling skills are paddling skills, hypothermia is hypothermia, and twenty-five-knot winds are

twenty-five-knot winds. A haul across mud flats metre surf is still scary
three-metre tidal range when the tide is outand (though a lot of fun), no
can still produce a long landing through two- matter where you paddle.
