Creating an orthography is often seen as a key component of language revitalisation. Encoding an endangered variety can enhance its status and prestige. In speech communities that are fragmented dialectally or geographically, a common writing system may help create a sense of unified identity, or help keep a language alive by facilitating teaching and learning. Despite clear advantages, creating an orthography for an endangered language can also bring challenges, and this volume debates the following critical questions: whose task should this be - that of the linguist or the speech community? Should an orthography be maximally distanced from that of the language of wider communication for ideological reasons, or should its main principles coincide for reasons of learnability? Which local variety should be selected as the basis of a common script? Is a multiletal script preferable to a standardised orthography? And can creating an orthography create problems for existing native speakers?

Language in Australia IGI Global

There are between 4,000 and 6,000 languages remaining in the world and the characteristics of these languages vary widely. How could an infant born today master any language in the world, regardless of the language's characteristics? Shelia M. Kennison answers this question through a comprehensive introduction to language development, taking a unique perspective that spans the period before birth through old age. The text offers in-depth discussions on key topics, including: the biological basis of language, perceptual development, grammatical development, development of lexical knowledge, social aspects of language, bilingualism, the effect of language on thought, cognitive processing in language production and comprehension, language-related delays and disorders, and language late in life.

The world's linguistic map has changed in recent years due to the vast disappearance of indigenous languages. Many factors affect the alteration of languages in various areas of the world including governmental policies, education, and colonization. As indigenous languages continue to be affected by modern influences, there is a need for research on the current state of native linguistics that remain across the globe. Indigenous Language Acquisition, Maintenance, and Loss and Current Language Policies is a collection of innovative research on the diverse policies, influences, and frameworks of indigenous languages in various regions of the world. It discusses the maintenance, attrition, or loss of the indigenous languages; language status in the society; language policies; and the grammatical characteristics of the indigenous language that people maintained and spoke. This book is ideally designed for anthropologists, language professionals, linguists, cultural researchers, geographers, educators, government officials,

policymakers, academicians, and students.
