The Music Producer's Ultimate Guide to FL Studio 21 Springer

Electronic musicians and composers will create songs or loops only minutes after launching the software with this guide to FL Studio (formerly Fruity Loops), a complete virtual studio application. How to streamline the recording of multitrack musical compositions is explained in order to create complex songs and realistic guitar loops with 32-bit internal mixing and advanced MIDI support. Musicians are then shown how the resulting song or loop can be exported to a WAV/MP3 file and how MIDI events can be exported to a standard MIDI file. Preparing FL Studio for effective work, carrying out the main

operations, building patterns in Step Sequencer, creating a melody in the Piano Roll view, and assembling and mixing a composition using Playlist and Mixer are also described.

This book is divided into two parts. The chapters in Part I offer a comprehensive introduction to the C language and to fundamental programming concepts, followed by an explanation of realtime audio programming, including audio synthesis and processing. The chapters in Part II demonstrate how the object-oriented programming paradigm is useful in the modelling of computer music instruments, each chapter shows a set of instrument components that are paired with key C++ programming concepts. Ultimately the author discusses the development of a fully-fledged object-oriented library. Together with its companion volume, *Computer Music Instruments: Foundations, Design and Development*, this book provides a comprehensive treatment of computational instruments for sound and music. It is suitable for advanced undergraduate and postgraduate students in music and signal processing, and for practitioners and researchers. Some understanding of acoustics and electronic music would be helpful to understand some applications, but it's not strictly necessary to have prior knowledge of audio DSP or programming, while C / C++ programmers with no experience of audio may be able to start reading the chapters that deal with sound and music computing.
