Preventing Challenging Behavior in Your Classroom Harvard University Press
 Teaching through Peer Interaction prepares teachers to use peer communication in the classroom. It presents current research of peer interaction and language learning for teachers, including background on the role of peer interaction in classroom language learning, guidelines for adopting and adapting peer interaction opportunities in real classrooms, and perspectives on teachers' frequently expressed concerns and questions about peer interaction. Practical and comprehensive, this text brings together information on peer communication across the different skill areas, for different learners, in different contexts, and includes discussion on assessment. The text is replete with sample activities, tasks, and instructional sequences to aid teachers' understanding of how to use peer interaction effectively in a range of classroom settings, making it the ideal textbook for upper-level undergraduate and graduate students in language education programs, as well as in-service teachers.

An in-depth examination of the novel ways young people support and learn from each other through participation in online fanfiction communities. Over the past twenty years, amateur fanfiction writers have published an astonishing amount of fiction in online repositories. More than 1.5 million enthusiastic fanfiction writers—primarily young people in their teens and twenties—have contributed nearly seven million stories and more than 176 million reviews to a single online site, Fanfiction.net. In this book, Cecilia Aragon and Katie Davis provide an in-depth examination of fanfiction writers and fanfiction repositories, finding that these sites are not shallow agglomerations and regurgitations of pop culture but rather online spaces for sophisticated and informal learning. Through their participation in online fanfiction communities, young people find ways to support and learn from one another. Aragon and Davis term this novel system of interactive advice and instruction distributed mentoring, and describe its seven attributes, each of which is supported by an aspect of networked technologies: aggregation, accretion, acceleration, abundance, availability, asynchronicity, and affect. Employing an innovative combination of qualitative and quantitative analyses, they provide an in-depth ethnography, reporting on a nine-month study of three fanfiction sites, and offer a quantitative analysis of lexical diversity in the 61.5 billion words on the Fanfiction.net site. Going beyond fandom, Aragon and Davis consider how distributed mentoring could improve not only other online learning platforms but also formal writing instruction in schools.

This book is an attempt to create awareness among practitioners and to strengthen the focus on inclusion in their strategies and future plans for education and highlight the areas that need particular attention to promote inclusive education and strengthen policy development. With this, we would move a step further and look into the current research trends in inclusive education as well as policy backdrops which provide us with the fair idea that how this idea of equity pedagogy is being propagated in the national educational policies of our country and further their translations in the Indian education realm. Papers compiled exhibit major concerns, issues, challenges and various practices for ensuring inclusion and inclusive pedagogical strategies for effective inclusive education. The researchers have also taken into account the social, cultural and learning diversities and the factors that facilitate to spot and remove barriers to learning and participation in education. It has the power to widen the scope of universal education by promoting access to all learners and accelerating educational equity too. This book also focuses on how stakeholders can contribute to

the continuous growth of inclusive education and its implications for society, communities, schools and classrooms as well to provide clarity on theoretical and research perspectives to promote the integration of theory and practice of inclusive education. The volume will be highly beneficial for teachers, parents, policymakers, administrators and students who care about the needs of the learners and the development of an equitable education system in our country.

"This book reveals how powerful learning could be if students and educators shared more of the teaching responsibilities! Involving students in the teaching experience helps them learn more academically and do more socially." —Peggy King-Sears, Professor George Mason University "In this easy-to-read resource, the authors help educators understand that inclusion isn't something that we do to and for students, but rather, something we must do with students. The powerful anecdotes of educators and students planning, tutoring, and teaching side by side give us new hope and further direction for the creation of inclusive schools." —Cathy L. Taschner, Assistant Superintendent Oxford Area School District, PA Take advantage of a resource that's right in your classroom—your students! How can you meet the needs of a diverse student population in mixed-ability classrooms and maintain a cooperative, caring, and active learning environment? Students are the perfect resource! Research shows that when students collaborate with teachers, they take responsibility for what happens in the classroom, care about their classmates, and become more engaged in learning. This comprehensive book offers practical strategies for empowering students as co-teachers, decision makers, and advocates in the classroom. Ideal for K-12 general and special education teachers, this guide describes how to involve students in instruction through collaborative learning groups, co-teaching, and peer tutoring that foster self-discipline and responsible behavior. Make students a part of decision making by utilizing personal learning plans, peer mediation, and other methods. Put collaboration with students into practice using the assessment tools, user-friendly lesson plans, case studies, and checklists included. Collaborating With Students in Instruction and Decision Making is packed with all the information, strategies, and tools teachers need to tap their students' potential as a resource for making a difference in the classroom.

This edited volume of papers from the twenty first International Conference on Chemical Education attests to our rapidly changing understanding of the chemistry itself as well as to the potentially enormous material changes in how it might be taught in the future. Covering the full range of appropriate topics, the book features work exploring themes as various as e-learning and innovations in instruction, and micro-scale lab chemistry. In sum, the 29 articles published in these pages focus the reader's attention on ways to raise the quality of chemistry teaching and learning, promoting the public understanding of chemistry, deploying innovative technology in pedagogy practice and research, and the value of chemistry as a tool for highlighting sustainability issues in the global community. Thus the ambitious dual aim achieved in these pages is on the one hand to foster improvements in the teaching and communication of chemistry—whether to students or the public, and secondly to promote advances in our broader understanding of the subject that will have positive knock-on effects on the world's citizens and environment. In doing so, the book addresses (as did the conference) the neglect suffered in the chemistry classroom by issues connected to globalization, even as it outlines ways to bring the subject alive in the classroom through the use of innovative technologies.

Institutional Interaction focuses on talk and interaction in institutional contexts. The first systematic book-length study on this expanding area, it discusses the theory and methodology of conversation analysis, focusing on studies of institutional interaction, before examining the basics of institutional interaction in selected fields. Cutting-edge new applications are assessed, such as human-computer interaction, the role of ethnography, statistics and the relationship of institutional talk to ordinary talk. Accessibly written and carefully structured to provide a sophisticated introduction to conversation analysis applied in institutional settings, the book offers a wealth of examples ranging from the classroom, to the courtroom, to the doctor's surgery. The book also features helpful suggestions for further reading, designed to appeal to students and academics in socio-linguistics, social psychology, organizational studies, management and information systems and applied linguistics.

Classrooms provide extremely varied settings in which learning may take place, including teacher-led conversations, small group unguided discussions, individual problem solving or computer supported collaborative learning (CSCL). Transformation of Knowledge through Classroom Interaction examines and evaluates different ways which have been used to support students learning in classrooms, using mathematics and science as a model to examine how different types of interactions contribute to students' participation in classroom activity, and their understanding of concepts and their practical applications. The contributions in this book offer rich descriptions and ways of understanding how learning occurs in both traditional and non-traditional settings.

Combining theoretical perspectives with practical applications, the book includes discussions of: the roles of dialogue and argumentation in constructing knowledge the role of guidance in constructing knowledge abstracting processes in mathematics and science classrooms the effect of environment, media and technology on learning processes methodologies for tracing transformation of knowledge in classroom interaction. Bringing together a broad range of contributions from leading international researchers, this book makes an important contribution to the field of classroom learning, and will appeal to all those engaged in academic research in education.
