On October 15 at 2:15 a.m. everyone on Earth vanished. Well, almost everyone. A scattered few woke alone in a world where there are no rules other than survival ... at any cost.

[The Text of Chaucer's Legend of Good Women](#) CRC Press

I.A.U. symposium No. 110 on VLBI and Compact Radio Sources was held in Bologna, Italy from June 27 to July 1, 1983. 166 participants from 19 countries were registered and 106 invited and contributed papers were registered. The scientific presentations and discussion concentrated on VLBI observation and interpretation of galactic and extragalactic radio sources, including topics as diverse as quasars and galactic nuclei, inter stellar masers, pulsars, and astrometry. Geodetic applications and technical development were treated only briefly, as these topics have been the subject of other recent international symposia. Since the first VLBI observations in 1967,

sensitivity, resolution, and image quality have improved dramatically. Radio maps shown at the symposium were of comparable quality to conventional synthesis maps being made at the time of the first VLBI experiments 15 years ago, but with a resolution more than a factor of 1000 better. We wanted to accommodate the large number of contributed papers in this rapidly developing field, but there was inadequate time for normal oral presentations and discussion. We therefore asked that all contributed papers be put on display for at least 24 hours prior to a brief oral summary. A question and discussion period followed groups of oral presentations on the same or similar topic. In this way the opportunity for interactive discussion, not available in conventional poster displays, was preserved.

Application of Solar Technology to Today's Energy Needs University of Hawaii Press

This book constitutes the proceedings of the 5th International Conference, FUN 2010, held in June 2010 in Ischia, Italy. FUN with algorithms is a three-yearly conference that aims at attracting works which, besides a deep and interesting algorithmic content, also present amusing and fun aspects. The 32 full papers and 3 invited talks are carefully selected from 54 submissions and focus on

topics such as distributed algorithms, graph computations, parallelism, zero-knowledge proof, iPhone, pattern matching and strategy games.

It is the year 2134 in a dystopian America, following a series of zombie plagues which infected and decimated much of the world's population starting 100 years ago. Those left, formed six walled Cities throughout the continent, all under the rule of a totalitarian government which enforces strict control over its populace. You must obey your government. You must be a good citizen. You must be a productive citizen. You must not break the law. Or The City Watch will find you and arrest you. Jonah Lovecraft, a former Watcher, was arrested for the murder of his wife. And like most criminals, he has one chance at freedom -- to participate in The Darwin Games, a televised survival show which pits two players from each city against one another in The Barrens, the uninhabited areas outside the City Walls. He'll also have to face another enemy -- the zombies which still roam The Barrens. As he fights for his freedom against impossible odds, his daughter, Anastasia, stumbles into people who have information about her father -- information which will

change her life forever. But it will also put her in the crosshairs of her father's enemies. Z 2134 is the first part of a new dystopian thriller from the bestselling authors of Yesterday's Gone. Make sure to check out Z 2135, the next chapter of this harrowing tale, out now, and the final part of the trilogy, Z 2136, out in Spring 2014! This book was initially released in episodes as a Kindle Serial. All episodes are now available for immediate download as a complete book. Learn more about Kindle Serials

Professionals recognize entropy-enthalpy compensation as an important factor in molecular recognition, lead design, water networks, and protein engineering. It can be experimentally studied by proper combinations of diverse spectroscopic approaches with isothermal titration calorimetry and is clearly related to molecular dynamics. So, how should we treat entropy-enthalpy compensation? Is it a stubborn hindrance that solely complicates the predictability of phenomena otherwise laid on the line by Mother Nature? How should we then deal with it? This book dwells on these posers. It combines two chapters written by globally recognized specialists. Chapter 1 deals with general issues and suggests a definite approach to how we may answer the posers. Chapter 2 shows how the approach outlined might be successfully applied in a rational design of enzymes. This might provide other interesting strategic perspectives in the general theoretical physical chemistry field.

The majority of meat, milk, and eggs consumed in the United States are produced in concentrated animal feeding operations (CAFO). With concentrated animal operations, in turn comes concentrated manure accumulation, which can pose a threat of contamination of air, soil, and water if improperly managed. Animal Manure: Production, Characteristics, Environmental

Concerns, and Management navigates these important environmental concerns while detailing opportunities for environmentally and economically beneficial utilization.

Generalized Functions, Volume 5: Integral Geometry and Representation Theory is devoted to the theory of representations, focusing on the group of two-dimensional complex matrices of determinant one. This book emphasizes that the theory of representations is a good example of the use of algebraic and geometric methods in functional analysis, in which transformations are performed not on the points of a space, but on the functions defined on it. The topics discussed include Radon transform on a real affine space, integral transforms in the complex domain, and representations of the group of complex unimodular matrices in two dimensions. The properties of the Fourier transform on G, integral geometry in a space of constant curvature, harmonic analysis on spaces homogeneous with respect to the Lorentz Group, and invariance under translation and dilation are also described. This volume is suitable for mathematicians, specialists, and students learning integral geometry and representation theory.

Proceedings of the Suffolk Institute of Archaeology Springer Science & Business Media

The wait is over — from the bestselling authors of the Yesterday's Gone series, come the final season of Whitespace. It's an ordinary day on Hamilton Island ... until a group of random people

commit horrific acts of coordinated violence. Except it wasn't random... Police Chief Kevin Brady finds himself closer to the truth about his daughter's disappearance and how it ties to the massacre. Jon and Cass attempt to recover from tragedy, only to find themselves haunted by inner demons that threaten to undo them both. Milo is closer to learning what really happened to Alex, as his father attempts to protect him from the truth — and his employer. And Sarah finds an unlikely ally who might be able to help her get back home. A covert surveillance and mind control program, missing children, transhumanism, clones, and murder are all part of a secret agenda which could determine the fate of humanity in this stunning series finale of the smash sci-fi thriller series. ★★★★★ "I loved this series! The wait was worth it, 'cause it did take awhile. Such an easy story to get hooked in. And after they did the "All-is-lost" beat to close last season, I had no clue how they were going to end the story, but these guys delivered and did an outstanding job." -- RTB ★★★★★ "This was a thrilling ending to a great series. There was so much intensity in this book that I couldn't sleep once the climactic ending started." -- David A. Tatman ★★★★★ "I always feel sort of bleak when I'm finished with a book that I enjoy, and this was no exception." -- DBStevens Whitespace is a character-driven, mysterious, creepy, paranoid, sci-fi thriller that reads like the literary version of a televised serial with the mysteries of LOST and the future paranoia of Black Mirror. Read the whole series today.
