Recommender systems are one of the recent inventions to deal with the ever-growing information overload in relation to the selection of goods and services in a global economy. Collaborative Filtering (CF) is one of the most popular techniques in recommender systems. The CF recommends items to a target user

based on the preferences of a set of similar users known as the neighbors, generated from a database made up of the preferences of past users. In the absence of these ratings, trust between the users could be used to choose the neighbor for recommendation making. Better recommendations can be achieved using an inferred trust network

which mimics the real world “friend of a friend” recommendations. To extend the boundaries of the neighbor, an effective trust inference technique is required. This book proposes a trust interference technique called Directed Series Parallel Graph (DSPG) that has empirically outperformed other popular trust inference algorithms, such as TidalTrust and MoleTrust. For times when reliable explicit trust data is not available, this book outlines a new method

called SimTrust for developing trust networks based on a user’s interest similarity. To identify the interest similarity, a user’s personalized tagging information is used. However, particular emphasis is given in what resources the user chooses to tag, rather than the text of the tag applied. The commonalities of the resources being tagged by the users can be used to form the neighbors used in the automated recommender system. Through a series of case

studies and empirical results, this book highlights the effectiveness of this tag-similarity based method over the traditional collaborative filtering approach, which typically uses rating data. Trust for Intelligent Recommendation is intended for practitioners as a reference guide for developing improved, trust-based recommender systems. Researchers in a related field will also find this book valuable. *Arabic Writing in the Digital Age* Princeton

Review

The World Bank Group is currently engaged in reflection and debate on how to improve the delivery of development support. Part of this debate concerns strengthening the knowledge agenda. The findings of this evaluation are particularly relevant because they speak directly to questions that the institution is deliberating. In particular, they address four key aspects of the “science of delivery”: the role of local partners or local

knowledge hubs; consultation with clients and other stakeholders in the process of designing knowledge services; delivery of knowledge on issues that are relevant to the client; and improving the way the Bank Group learns from upper-middle-income countries and intermediating this knowledge to other countries. The evaluation assesses knowledge-based activities in nine country programs selected from 48 knowledge-intensive programs supported by

the Bank Group. It identifies the factors in the success or failure of those activities as they contribute to policy making or development outcomes. It also identifies areas of strength for the Bank Group as well as areas of weakness or risk. The main objective of the evaluation is to learn lessons from practices in a focus group of high-income and upper-middle-income countries that have knowledge-based programs with the Bank Group. The findings have

implications for the Bank Group's knowledge work, including governance and incentives. Over the past 15 years, Bank Group country programs have shifted toward more intensive delivery of knowledge services relative to lending, and this trend is expected to continue. The evaluation was done on economic and sector work and non-lending technical assistance activities selected from a purposive sample of knowledge-intensive country programs. In addition, the

evaluation assessed International Finance Corporation Advisory Services for their synergy with the Bank's analytical and advisory activities. The lessons from this evaluation could help leverage the Bank Group's global knowledge to meet the needs of countries that mainly rely on knowledge services and are not pressed for financing. In the movement toward standards-based education, an important question stands out: How will this reform affect the 10% of school-aged children who have disabilities and thus qualify for special education? In *Educating One and All*, an expert

committee addresses how to reconcile common learning for all students with individualized education for "one"â€"the unique student. The book makes recommendations to states and communities that have adopted standards-based reform and that seek policies and practices to make reform consistent with the requirements of special education. The committee explores the ideas, implementation issues, and legislative initiatives behind the tradition of special education for

people with disabilities. It investigates the policy and practice implications of the current reform movement toward high educational standards for all students. *Educating One and All* examines the curricula and expected outcomes of standards-based education and the educational experience of students with disabilitiesâ€"and identifies points of alignment between the two areas. The volume documents the diverse population of students with disabilities and their

school experiences. Because approaches to assessment and accountability are key to standards-based reforms, the committee analyzes how assessment systems currently address students with disabilities, including testing accommodations. The book addresses legal and resource implications, as well as parental participation in children's education.

Reference Catalogue of Current Literature The Princeton Review AI 2001 is the 14th in the

series of Artificial Intelligence conferences sponsored by the Canadian Society for Computational Studies of Intelligence/Société canadienne pour l'étude de l'intelligence par ordinateur. As was the case last year too, the conference is being held in conjunction with the annual conferences of two other Canadian societies, Graphics Interface (GI 2001) and Vision Interface (VI 2001). We believe that the overall experience will be enriched by this conjunction of

conferences. This year is the "silver anniversary" of the conference: the first Canadian AI conference was held in 1976 at UBC. During its lifetime, it has attracted Canadian and international papers of high quality from a variety of AI research areas. All papers submitted to the conference received at least three independent reviews. Approximately one third were accepted for plenary presentation at the conference. The best paper of the conference will be invited to appear in

Computational Intelligence.

This book will be a 'how to' guide for medical students interested in pursuing a career in academic surgery. It will discuss personal traits and rationale for going into academic surgery. It will review accomplishments as a

medical student that are key components of beginning an academic career and highlight what makes a student competitive for a surgical program. Sections will be devoted to mentorship, research experience and personal experiences that lead to success. The editors will also focus on gender and work-life balance issues that often are perceived as barriers to a career in academic surgery. It will also provide key dates and sample application information for students

to use as templates.

Oxford University Press
True or False: Princeton's Director of Admissions hacked into Yale's secured admissions website to find out who Yale had accepted and rejected. Boston College's average SAT score is up to 1370 and Boston University's average SAT score is up to 1320. Carnegie Mellon offers spots on a priority wait-list to students who send in cash and most of these students get admitted. Well, it's all true. An FBI

investigation traced Yale's hacked website back to the computer of Princeton's Director of Admissions, Stephen LeMenager. Boston College's average SAT score is the same as Cornell's and close to Penn's (both Ivies). Carnegie Mellon does have a "priority" wait-list- it costs \$400 to be on it and the admissions rate is 95%. Welcome to the circus. Dazed and Confused. Students see the college list published by their high school's guidance department

listing every acceptance and rejection from the prior year. Next to each entry is a GPA, a SAT score and the number of AP classes taken. The list is usually ordered from highest to lowest GPA. The first entry: 4.19 (unweighted), 1430 SAT, 7 AP classes, Princeton-rejected, Yale-rejected, Harvard-rejected, Stanford-rejected, Columbia-rejected, Vassar-accepted. Ouch. Scan down the list looking for Yale. Did anyone get into Yale last year? Down at the ninth entry: 3.93,

1450 SAT, 6 AP classes, Brown-accepted, Yale-accepted, Georgetown-accepted. Okay, anyone else? Scan down to the twenty-second entry: 3.88, 1560 SAT, 7 AP classes, Yale-accepted, Duke-accepted, William and Mary-rejected. This doesn't make any sense, thinks the student. Many of the students with the best grades didn't get into any top colleges and still others were rejected at colleges ranked lower than the colleges to which they were accepted. Welcome to the world of

college admissions. Ever wondered what a private counselor tells an Upper East Side family for \$10,000? The secrets are in *College Admissions Trade Secrets*. *College Admissions Trade Secrets* is a straight forward guide to: *Top 7 Lies Colleges Tell The Real Scoop Behind Acceptance Rates Things That Really Matter When Comparing Colleges How to Write a Great Essay and Prep for a Great Interview Common Mistakes that Result in Rejection Last Minute Tips for Seniors A Scandalous*

Learning and Memory: A Comprehensive Reference, Second Edition is the authoritative resource for scientists and

students interested in all facets of learning and memory. This updated edition includes chapters that reflect the state-of-the-art of research in this area. Coverage of sleep and memory has been significantly expanded, while neuromodulators in memory processing, neurogenesis and epigenetics are also covered in greater detail. New chapters have been included to reflect the massive increase in research into working memory and the educational relevance of

memory research. No other reference work covers so wide a territory and in so much depth. Provides the most comprehensive and authoritative resource available on the study of learning and memory and its mechanisms. Incorporates the expertise of over 150 outstanding investigators in the field, providing a 'one-stop' resource of reputable information from world-leading scholars with easy cross-referencing of related articles to promote understanding

and further research. Includes further reading for each chapter that helps readers continue their research. Includes a glossary of key terms that is helpful for users who are unfamiliar with neuroscience terminology.

The Recording, Mixing, and Mastering Reference

Handbook provides an easy-to-read guide for music-making in the studio setting, from equipment fundamentals to recording and mixing almost any instrument. In six sections, lessons give a comprehensive introduction to microphone settings and techniques, audio processing and effects, controlling acoustics, and history lessons on songs recorded with a given technique. The second half of the handbook delves into background theory on microphones,

EQ-filters, compressors, and acoustics to give the reader a general understanding of practical recording techniques before acquiring deeper comprehension of the tools and the recording processes. Throughout the chapters, lessons on recording methods gradually build complexity and detail to keep readers engaged and challenged. Whether a university student in an audio recording course, a novice audio engineer who needs to build technique, or a busy professional who

requires a quick refresh on specific techniques, any reader will find an essential resource in *The Recording, Mixing, and Mastering Reference Handbook*.

This volume presents the proceedings of the joint conference of the European Medical and Biological Engineering Conference (EMBEC) and the Nordic-Baltic Conference on Biomedical Engineering and Medical Physics (NBC), held in

Tampere, Finland, in June 2017. The proceedings present all traditional biomedical engineering areas, but also highlight new emerging fields, such as tissue engineering, bioinformatics, biosensing, neurotechnology, additive manufacturing technologies for medicine and biology, and bioimaging, to name a few. Moreover, it emphasizes the role of education, translational research, and commercialization.

Oxford University Press
This volume presents a data-rich description of English inflection and word-formation. Based on large corpora including the Corpus of Contemporary American English and the British national Corpus, it is the first comprehensive treatment of contemporary English morphology that includes both inflection and word-formation. It covers not only well-studied topics

such as compounding, conversion, and the inflection and derivation of nouns and verbs, but also areas that have received less scholarly attention, such as the formation of adjectives, locatives, negatives, evaluatives, neoclassical compounds and blends, among many other topics. Equal weight is given to form and meaning. The volume also contains sections devoted to phonological and orthographics aspects of morphology and to combinatorial and

paradigmatic properties of English morphology. It ends with a series of chapters that assess the implications of English morphology for morphological theory, discussing topics such as stratification, blocking and competition, the analysis of conversion, and the relationship between inflection and derivation. Winner of the 2015 Bloomfield Book Award and written by three outstanding scholars, this outstanding book will interest all scholars and students of English and of

linguistic morphology more generally.

signup. This book explains the different benefits of the system and recommends best practices so that you can get the most out of LinkedIn.

Cracking the GMAT

2014 Princeton Review
The written and spoken forms of Arabic have been traditionally viewed as separate forms of the language that rarely overlap in writing, but this book will examine the recently emerged concept of 'mixed' writing that combines both written and spoken forms. This

book takes a close look at different examples of mixed Arabic writing in modern (twentieth to twenty-first century) print and online literature, offering an analysis of this type of mixing alongside a dynamic model for analysing mixed Arabic writing, and the motivations for producing this type of writing. This book further introduces the ground-breaking concept of the seven writing styles for Arabic, ranging from Classical Arabic to ChatSpeak, whilst also offering an

overview of early Arabic literacy and children's literature. Primarily aimed at Arabic researchers and teachers in linguistics, sociolinguistics, identity studies, politics and Teaching Arabic as a Foreign Language, this book would also be informative for

undergraduate and postgraduate students studying Arabic as foreign language, Arabic linguistics and dialectology.
