L'étude pratique des plans de villes Editions Champ Vallon

Departing from a survey on the post-modern landscapes of tourism, this book explores the transformations the city has undergone and the way it has become a simulacrum offered to tourists, spectacularised with the aim of increasing its capacity for attraction. The experiences dealt with in the papers of authors belonging to different disciplinary fields, emphasise the city's tendencies to create "stage-set contexts" of the private type, be it historic quarters, theme parks or hypermarkets. Issues like aestheticisation, thematisation and genericity are dealt with, conceptual categories that highlight the weak resistance cities put up against the rules of the leisure industry and, more generally speaking, the consumer economy. The book inquires into the capacity of the urban and territorial project to construct a perspective for a public dimension of space. This is linked with ethical action of the project involving an active relationship with places and a capacity to understand the dynamics of different urban populations. In this sense capacity for innovation and creativity can contribute to transforming "islands" of leisure into places of the city and consumers into citizens.

L'etude pratique des plans de villes Editions Mardaga

Sur la période qui court des années 1960 à aujourd'hui, un changement de fond travaille les raisons d'agir : pendant l'âge d'or de l'aménagement du territoire, les urbanistes dupliquaient la centralité afin de désengorger les centres existants. Ils se demandent aujourd'hui pourquoi et comment rendre désirables les lieux centraux alors que la dispersion urbaine semble s'imposer et que les moyens et finalités de l'action urbanistique sont incertains. Le prisme analytique de la centralité permet, au cours de cette réflexion, de questionner le nouvel esprit de l'urbanisme.

Garden cities and colonial planning Lexington Books

Politics and culture are at once semi-autonomous and intertwined. Nowhere is this more revealingly illustrated than in urban design, a field that encompasses architecture and social life, traditions and modernization. Here aesthetic goals and political intentions meet, sometimes in collaboration, sometimes in conflict. Here the formal qualities of art confront the complexities of history. When urban design policies are implemented, they reveal underlying aesthetic, cultural, and political dilemmas with startling clarity. Gwendolyn Wright focuses on three French colonies--Indochina, Morocco, and Madagascar--that were the most discussed, most often photographed, and most admired showpieces of the French empire in the early twentieth century. She explores how urban policy and design fit into the French colonial policy of "association," a strategy that accepted, even encouraged, cultural differences while it promoted modern urban improvements that would foster economic development for Western investors. Wright shows how these colonial cities evolved, tracing the distinctive nature of each locale under French imperialism. She also relates these cities to the larger category of French architecture and urbanism, showing how consistently the French

tried to resolve certain stylistic and policy problems they faced at home and abroad. With the advice of architects and sociologists, art historians and geographers, colonial administrators sought to exert greater control over such matters as family life and working conditions, industrial growth and cultural memory. The issues Wright confronts--the potent implications of traditional norms, cultural continuity, modernization, and radical urban experiments--still challenge us today.

Urbanisation sans urbanisme Editions L'Harmattan

Everyone knows Notre Dame, the Eiffel Tower, and the chateaux of the Loire Valley, but French architects have also produced some of the most iconic buildings of the twentieth century, playing a central role in the emergence and development of modernism. In France, Jean-Louis Cohen presents a complete narrative of the unfolding architectural modernity in the country, grappling not only with the buildings but also with the political and critical context surrounding them. Cohen examines the developments in urban design and architecture within France, depicting the continuities and breaks in French architecture since 1900 against a broader international background. Describing the systems of architectural exchange with other countries—including Italy, Germany, Russia, and the United States—he offers a new view on the ideas, projects, and buildings otherwise so often considered only from narrow nationalistic perspectives. Cohen also maps the problematic search for a national identity against the background of European rivalries and France's colonial past. Drawing on a wealth of recent research, this authoritatively written book will challenge the way design professionals and historians view modern French architecture.

The Politics of Design in French Colonial Urbanism IGI Global

In this study of space and power and knowledge in France from the 1830s through the 1930s, Rabinow uses the tools of anthropology, philosophy, and cultural criticism to examine how social environment was perceived and described. Ranging from epidemiology to the layout of colonial cities, he shows how modernity was revealed in urban planning, architecture, health and welfare administration, and social legislation.

Bibliographie de la France Springer Science & Business Media

This popular and influential work, translated here into English for the first time, argues that modern urbanism has upset the morphology of cities, abolished their streets and isolated their buildings. In tracing the stages of this transformation, this book presents the view that the urban tissue, the intermediate scale between the architecture of buildings and the diagrammatic layouts of town planning, is the essential framework for everyday life. Only by investigating the urban tissue will it be possible to understand the complex relationships between plot and built form, between streets and buildings and between these forms and design practices. The chosen trail of the first French edition - Paris, London, Amsterdam, Frankfurt - is one of continuously evolving modernity. It outlines a history, which, in one century (1860-1960), completely changed the aspect of our towns and cities and transformed our way of life. The shock has been such that we are still looking for answers, still attempting to find urban forms that can accommodate present day ways of life and at the same time

maintain the qualities of the traditional town. This English edition brings the story forward to the present day and considers the impact of the New Urbanism in the United States, which, over the last decade, has sought to re-establish former relationships within the urban tissue.

Unlike European countries where the consolidation of town planning was based on legislative reforms, Latin America's urbanismo mainly stemmed from urban plans for national capitals and metropolises. Austrian academic and planner Karl Brunner was hired in Chile, Colombia and Panama from the late 1920s to advise in the professional and academic domains, marking a shift from the so-called École Française d'Urbanisme (EFU) of Haussmannesque descent towards the Austrian-German Städtebau. While coordinating the municipal office and plan for Bogotá, Brunner translated his *Manual de Urbanismo* - the first textbook published in Latin America about the new discipline and the first to incorporate examples from local cities. Based on his 1924 course at Vienna's National Faculty of Architecture Brunner's *Manual* emphasized the 'scientific system' of the discipline. Brunner was the most influential figure of his time in the urban planning of the region, but has become overshadowed by Le Corbusier's and CIAM's prevailing influence after the Second World War. Complete with a supporting introduction written by Arturo Almandoz, this volume includes the full copy of the original *Manual de Urbanismo* with an English translation of the synthesis. Further materials, including an extract of Karl Brunner's "Problemas actuales de urbanización" and an accompanying English translation of the text can be accessed at www.routledge.com/9781138778573

Ce manuel, publié en anglais en 1909, a joué un rôle pionnier dans l'application de la méthode scientifique à l'aménagement urbain. Prenant appui sur la théorie et la pratique de l'urbanisme en Angleterre, France, Autriche et Allemagne, il propose une méthode opérationnelle aux aménageurs. Il a été traduit dans de nombreuses langues et régulièrement réédité pendant l'Entre-deux-guerres. A partir des années 1970, il devient la référence de ceux qui désirent se démarquer de la planification moderniste et renouer avec l'art urbain.

This book offers a new framework for comparing experiences of integration: regionalization must be reinterpreted as an aspect of modernization, modernization unfolding also at the local, national and global levels. The contributors discuss how and why the different visions of modernity that inform modernization projects encouraged the construction (or rejection) of regional integration, at different times and in different places. It starts with an analysis of plans for the economic integration of Europe in the aftermath of World War I. It shows how integration was identified as the means to

modernize the region with a view to helping it overcome political fragmentation and adapt to new conditions of global capitalism. It then turns to the debate on modernization unfolding in the era that constituted the formative period of integration for both Europe and Latin America. It analyses examples of the complex interaction between these two different experiences, as it extends into the present. Finally, it looks at the social and political actors that promoted integration in the two regions and at the discourse they formulated to do so.

Etudes pratiques sur les maladies nerveuses et mentales Routledge

This collection is a study of the process by which European planning concepts and practices were transmitted, diffused and diverted in various colonial territories and situations. The socio-political, geographical and cultural implications are analysed here through case studies from the global South, namely from French and British colonial territories in Africa as well as from Ottoman and British Mandate Palestine. The book focuses on the transnational aspects of the garden city, taking into account frameworks and documentation that extend beyond national borders, and includes contributions from an international network of specialists. Their comparative views and geographical focus challenge the conventional, Eurocentric approach to garden cities, and will interest students and scholars of planning history and colonial history.

The city appears as an artefact, a more or less homogeneous technical ensemble, but also as a production of space, the privileged place where social relations in all historical forms take place. The city, which is crossed by all socialities and their contradictions, is directly influenced by them and is even their privileged vector. Introducing the technical developments that are expressed in a multidisciplinary approach into the lived social world facilitates the understanding of the city and the way in which it adapts to the difficulties it faces. We propose the morpho-sociological approach, which gives a representation of the state of the contemporary city and the conditions of its production; the geographical approach with the problems of development and the sharing of these areas; the economic approach with the modalities specific to a development model, making urban composition the answer to the problems of the sustainable city; and the sociological approach when it comes up against the effects of the now dominant digital world.

"L'urbanisme traditionnel peine à appréhender des formes d'urbanisation aujourd'hui largement majoritaires en Europe : les territoires contemporains 'd'entre-deux', ni urbains ni ruraux. Ils posent question à ceux qui les analysent, les organisent ou s'y inscrivent. Cet ouvrage tire ses enseignements de l'un des plus représentatifs d'entre eux : la Belgique et le Brabant, ex-province autour de Bruxelles. Qualifier ce territoire au milieu de l'Europe, laborieuse couture entre les

mondes latins, anglo-saxons et germaniques nécessitent non seulement une analyse critique des notions courantes (du rural à la città diffusa) mais aussi une re-lecture, multiscalaire, de l'histoire de sa formation. Basée sur la production d'une cartographie originale, depuis les grandes structures médiévales jusqu'aux formes contemporaines de l'habitat, elle fait apparaître des caractéristiques de polycentralité, de subsidiarité, de maillage, de pouvoir local, de villes en réseau par-delà les territoires, qui ne sont pas sans évoquer des modes de gouvernance en débat aujourd'hui. Ce terrain d'analyse mène ainsi à une réflexion méthodologique particulièrement fertile sur les territoires habités sans densité, renouvelant la manière de les appréhender. En replaçant la 'ville diffuse' dans sa complexité, ses spécificités et sa temporalité longue, cet ouvrage souhaite contribuer à une

histoire large de l'urbanisation, irréductible à celle de l'urbanisme, et proposer une vision enrichie de la notion d'urbanité."--P. 4 of cover.
