## TRISTEN CANTRELL

*Kids in the Syndrome Mix of ADHD, LD, Autism Spectrum, Tourette's, Anxiety, and More!* John Wiley & Sons

TRP channels play a key role in sensory physiology and have been the focus of intensive investigation in recent years. This book is a comprehensive, detailed overview of the ways in which TRP channels are involved in a wide variety of sensory modalities. Authors explore the involvement of TRP channels in phototransduction (sight), chemotransduction (taste and odor), mechanotransduction (touch and hearing), thermotransduction (the sensation of temperature), and pain perception. Furthermore, the book includes some grounding chapters such as one on the history of TRP channel research, one on the biophysical characteristics of the proteins, and one on trafficking and post-translational regulation.

**Whose Values?** Springer

Quickly acquire the knowledge and skills you need to confidently administer, score, and interpret the most popular neuropsychological assessment instruments Neuropsychological testing can identify changes in cognition, behavior, and emotion; aid in determining the cause of a disorder or developmental problem; and assist clinicians in planning treatment and rehabilitation. To use these tests properly, professionals need an authoritative source of advice and guidance on how to administer, score, and interpret them. Now fully revised and in a second edition, *Essentials of Neuropsychological Assessment* is that source. Completely updated to include the most current instruments, including the Delis-Kaplan Executive Function System (D-KEFS), the Wechsler Intelligence Scale for Children-Fourth Edition (WISC-IV), the Wechsler Adult Intelligence Scale-Fourth Edition (WAIS-IV), and the Wechsler Memory Scale-Fourth Edition (WMS-IV), *Essentials of Neuropsychological Assessment, Second Edition* presents an overview of the assumptions, logic, knowledge base, and skills underlying the practice of neuropsychological assessment. Neuropsychological experts Nancy Hebben and William Milberg describe how clinical history, behavioral observations, and formal test results are used to make inferences about the contribution of brain dysfunction to psychological functioning. Like all the volumes in the *Essentials of Psychological Assessment* series, this book is designed to help busy mental health professionals quickly acquire the knowledge and skills they need to make optimal use of major neuropsychological assessment instruments. Each concise chapter features numerous callout boxes highlighting key concepts, bulleted points, and extensive illustrative material, as well as test questions that help you gauge and reinforce your grasp of the information covered. *Essentials of Neuropsychological Assessment, Second Edition* provides comprehensive instruction on neuropsychological test administration, scoring, interpretation, and report writing. It also addresses practical and conceptual issues related to neuropsychological assessment in geriatric, pediatric, forensic, and other specialized settings. Other titles in the *Essentials of Psychological Assessment* series: *Essentials of Assessment Report Writing* *Essentials of WAIS-IV Assessment* *Essentials of WISC-IV Assessment, Second Edition* *Essentials of WIAT-II and KTEA-II Assessment* *Essentials of WJ IIIITM Cognitive Abilities Assessment* *Essentials of WJ IIIITM Tests of Achievement Assessment* *Essentials of School Neuropsychological Assessment* *Essentials of Cross-Battery Assessment, Second Edition* *Essentials of KABC-II Assessment* *Essentials of NEPSY Assessment* *Essentials of Executive Function Assessment* *Essentials of Processing Assessment*

*Susan Sontag* HarperCollins

The collapse of the USSR seemed to spell the end of the empire, yet it by no means foreclosed on Russia's enduring imperial preoccupations, which had extended from the reign of Ivan IV over four and a half centuries. Examining a host of films from contemporary Russian cinema, Nancy Condee argues that we cannot make sense of current Russian culture without accounting for the region's

habits of imperial identification. But is this something made legible through narrative alone-Chechen wars at the periphery, costume dramas set in the capital-or could an imperial trace be sought in other, more embedded qualities, such as the structure of representation, the conditions of production, or the preoccupations of its filmmakers? This expansive study takes up this complex question through a commanding analysis of the late Soviet and post-Soviet period auteurs, Kira Muratova, Vadim Abdrashitov, Nikita Mikhalkov, Aleksei German, Aleksandr Sokurov and Aleksei Balabanov.

*Chemical Ecology* John Wiley & Sons

This unique book synthesizes the work of leading thinkers of the French School of psychoanalytical projective methods in personality assessment. The French School is a direct successor to Rorschach's and Murray's original approaches using the Rorschach Test and the Thematic Apperception Test (TAT). Underlying this method is the idea of the coexistence of conscious and unconscious processes, of opposite instinctual pairs, and of agents that are ruled by conflicts (Freud). Transitional activity is seen as part of an intermediate space, a mediator space, and bearer of messages between the subject and the clinician (Winnicott). This book brings to life the important contributions of the French School, firstly exploring its theories and methods and then its clinical applications. Detailed case studies from different stages of life examine the psychopathology of everyday life with its severe and disabling states of suffering. Contemporary advances in research and clinical work are presented, and the groundbreaking early work of Nina Rausch de Traubenberg, Vica Shentoub, and Rosine Debray are also critically reread and discussed. Clinical tools adapted for clinicians and researchers in the appendices include a useful schema to facilitate the interpretation of the Rorschach and TAT together, a list of latent solicitations for the TAT, and the current version of the TAT Scoring Grid. This book is essential reading for clinical psychologists, psychiatrists, psychotherapists, researchers, and students interested in applying psychoanalytical theory to projective methods.

*Social Interchange in Infancy* International Perspectives in Values-Based Mental Health PracticeThis open access book offers essential information on values-based practice (VBP): the clinical skills involved, teamwork and person-centered care, links between values and evidence, and the importance of partnerships in shared decision-making. Different cultures have different values; for example, partnership in decision-making looks very different, from the highly individualized perspective of European and North American cultures to the collective and family-oriented perspectives common in South East Asia. In turn, African cultures offer yet another perspective, one that falls between these two extremes (called batho pele). The book will benefit everyone concerned with the practical challenges of delivering mental health services. Accordingly, all contributions are developed on the basis of case vignettes, and cover a range of situations in which values underlie tensions or uncertainties regarding how to proceed in clinical practice. Examples include the patient's autonomy and best interest, the physician's commitment to establishing high standards of clinical governance, clinical versus community best interest, institutional versus clinical interests,

patients insisting on medically unsound but legal treatments etc. Thus far, VBP publications have mainly dealt with clinical scenarios involving individual values (of clinicians and patients). Our objective with this book is to develop a model of VBP that is culturally much broader in scope. As such, it offers a vital resource for mental health stakeholders in an increasingly inter-connected world. It also offers opportunities for cross-learning in values-based practice between cultures with very different clinical care traditions. Susan Sontag

Providing a structured vocabulary for all levels of undergraduate French courses, this text offers coverage of concrete and abstract vocabulary relating to the physical, cultural, social, commercial and political environment, as well as exposure to commonly encountered technical terminology. Vintage

Deleuze believed that philosophy cannot be undertaken independently of science and art. These essays testify to his long-term desire to dismantle the barriers between art and its adjacent domains.

**Entrepreneurship Education and Research in the Middle East and North Africa (MENA)** Hogrefe Publishing GmbH

The completely updated and expanded new edition of this well-established text incorporates DSM-5 changes as well as other new developments. The all-in-one guide covers the whole range of often co-existing neuro-behavioral disorders in children – from attention deficit hyperactivity disorder (ADHD), obsessive-compulsive disorder, and anxiety, to autism spectrum disorders, nonverbal learning disabilities, Tourette's, sensory integration problems, and executive dysfunction. A completely revised chapter on the autism spectrum by Tony Attwood explains not only new understanding in the field, but the new diagnostic criteria, and the anticipated usage of the term 'Asperger's Syndrome'. Dr. Kutscher provides accessible information on causes, symptoms, interactions with other conditions, and treatments. He presents effective behavioral strategies for responding to children who display traits of these disorders – whether at home, at school, or in other settings – along with case vignettes and practical tips. Finally, a chapter on the role of medications summarizes current knowledge. The author's sympathetic yet upbeat approach and skillful explanations of the inner world of children in the syndrome mix make this an invaluable companion for parents, teachers, professionals, and anyone else who needs fast and to-the-point advice on children with special needs.

*Nuclear Medicine in the Context of Personalized Medicine* Oxford University Press, USA

The Polish-born, British-based pianist André Tchaikowsky (1935-82) saw himself principally as a composer- one of several conflicting elements in his personality, charted by the diaries he kept between 1974 and 1982.

**Higher Education in the Arab World** Routledge

This book is the first major account of innovation and entrepreneurship in the Arab higher-education sector. It provides an update of the current situation and advances reasons for the under-performance of Arab universities in international ranking tables and the weaknesses of Arab economies. Specific proposals are made for upgrading curricula and assessment procedures as well as providing an environment that fosters innovation and entrepreneurial behaviour. The roles of university-based technology and business parks are examined, with examples of successful business partnerships in the Arab region, Europe, and North America. Opportunities for innovation and entrepreneurship have never been greater with the wealth of rapidly developing transformative technologies that are driving the international knowledge economy. This book puts forward proposals for the management and exploitation of intellectual property, and for establishing businesses.

**Cassandra Speaks** John Wiley & Sons

This book offers an in-depth examination of labor pain and analgesia with the aim of promoting natural childbirth without pain. All aspects of the subject are covered, including the latest techniques of delivering labor analgesia. Importantly, emphasis is placed on a holistic approach, detailed attention being paid to the humanization of childbirth and behavioral aspects in addition to evidence-based medicine. Potential future developments are also addressed, with discussion of opportunities that have yet to be realized. In order to ensure that the text is easily readable for trainees as well as established practitioners, chapters have been restricted to a manageable length and information is presented clearly and succinctly. Step-by-step tutorials and boxes highlighting practical points are used to clarify technical aspects. The authors include both well-established experts and young emerging professionals from various European countries, ensuring an intercultural perspective.

*Brain-Computer Interfaces 1* Springer

This contributed volume explores and reveals the new developments, dynamics and recommendations for entrepreneurship education in the Middle East and North Africa (MENA) region. Presenting papers by respected experts in the field, it shares essential insights on the status quo of entrepreneurial education and training programs, the characteristics and motivations of early stage entrepreneurs, and the regional framework conditions in MENA. The book closes with a bibliometric perspective on the trends in the entrepreneurship research and education being developed in MENA.

**Essays Critical and Clinical** McGraw-Hill Education (UK)

At last, a book about a group that's been sorely neglected, those who have come of age in an advanced industrial society in the late 20th century. Looks at facets such as education, youth unemployment and crime, family structure, and personal aspirations, using a multidisciplinary approach. Discusses the prolongation of youth resulting from industrialization and legislation, economic disenfranchisement and the new service worker, and youth targeted as consumers of the media, music, fashion, and education industries. Offers a model of coming of age in Sweden.

**Control of Posture and Locomotion** Cambridge University Press

What story would Eve have told about picking the apple? Why is Pandora blamed for opening the box? And what about the fate of Cassandra who was blessed with knowing the future but cursed so that no one believed her? What if women had been the storytellers? Elizabeth Lesser believes that if women's voices had been equally heard and respected throughout history, humankind would have followed different hero myths and guiding stories—stories that value caretaking, champion compassion, and elevate communication over vengeance and violence. *Cassandra Speaks* is about the stories we tell and how those stories become the culture. It's about the stories we still blindly cling to, and the ones that cling to us: the origin tales, the guiding myths, the religious parables, the literature and films and fairy tales passed down through the centuries about women and men, power and war, sex and love, and the values we live by. Stories written mostly by men with lessons and laws for all of humanity. We have outgrown so many of them, and still they endure. This book is about what happens when women are the storytellers too—when we speak from our authentic voices, when we flex our values, when we become protagonists in the tales we tell about what it means to be human. Lesser has walked two main paths in her life—the spiritual path and the feminist one—paths that sometimes cross but sometimes feel at cross-purposes. *Cassandra Speaks* is her extraordinary merging of the two. The bestselling author of *Broken Open* and *Marrow*, Lesser is a beloved spiritual writer, as well as a leading feminist thinker. In this book she gives equal voice to the cool water of her meditative self and the fire of her feminist self. With her trademark gifts of both humor and insight, she offers a vision that transcends the either/or ideologies on both sides of the gender debate. Brilliantly structured into three distinct parts, Part One explores how history is carried forward through the stories a culture tells and values, and what we can do to balance the scales. Part Two looks at women and power and expands what it means to be courageous, daring, and strong. And Part Three offers “A Toolbox for Inner Strength.” Lesser argues that change in the culture starts with inner change, and that no one—woman or man—is immune to the corrupting influence of power. She provides inner tools to help us be both strong-willed and kind-hearted. *Cassandra Speaks* is a beautifully balanced synthesis of storytelling, memoir, and cultural observation. Women, men and all people will find themselves in the pages of this book, and will come away strengthened, opened, and ready to work together to create a better world for all people.

**Shutting Out the Sun** Springer Science & Business Media

This cutting-edge book brings advances in genetics, neurobiology, and psychopharmacology to the clinic to enhance treatment for neurodevelopmental disorders. Significant progress has been made in identifying the neurobiological mechanisms of several disorders and targeted treatments are modifying the outcome of these disorders. However, the ability to utilize this knowledge has not been summarized in one place for the practicing clinician. This book will fill that gap by providing the theoretical underpinnings and the latest advances in targeted treatments. Several neurodevelopmental disorders are reviewed in detail including clinical features and behavioral phenotypes, standard treatments and new targeted treatments based on the latest advances in neurobiology and the animal model studies that have led to new treatments. The disorders covered include psychiatric disorders: schizophrenia, depression, autism and ADHD; single gene disorders including Tuberous Sclerosis, Fragile X Syndrome and fragile X- associated disorders, Angelman Syndrome, PKU, and Muscular Dystrophies; and complex genetic disorders such as Down syndrome. This book also highlights the commonalities across disorders and new genetic and molecular concepts in an easy to read format. This is a very exciting time for new targeted treatments and this volume is a landmark treatise on this new age of treatment.

**TRP Channels in Sensory Transduction** Distributed Art Publishers (DAP)

This collection of classic and contemporary essays makes a major contribution to the reassessment of psychoanalytic understanding and treatment of adults. Contributors: Peter Blos, Raymond Cahn, Anna Freud, Sigmund Freud, Philippe Gutton, Evelyne Kestemberg, Francois Ladame, Moses Laufer, Jean Lampl-de Groot, Maja Perret-Catipovic

**Epidural Labor Analgesia** Jessica Kingsley Publishers

The traditional production measure of moral judgment has been the Moral Judgment Interview (MJI), which uses hypothetical moral dilemmas to elicit moral judgment. However, the MJI dilemmas have been criticized as artificial and may not be entirely appropriate for children, certain cultures, and practical moral situations. This unique volume utilizes and evaluates a new production measure of moral judgment, the Sociomoral Reflection Measure -- Short Form (SRM-SF), which substitutes brief stimulus materials and evaluative questions for the moral dilemma technique. The authors report that the SRM-SF exhibits an impressive degree of reliability and validity and is quicker to administer and score than other available measures. To illustrate these findings, this book offers the resources needed for the assessment of the Kohlbergian stage of moral judgment using the SRM-SF. These resources include: an up-to-date review of research and theory, a group-administrable questionnaire, an efficient scoring manual, and self-training exercises in assessment. Psychometrically sound and practical, the SRM-SF has the potential to become the leading moral judgment measure of the 90s.

**A Research Agenda For DSM V** Routledge

Schizophrenia may not be a single disease, but the result of a diverse set of related conditions. Modern neuroscience is beginning to reveal some of the genetic and environmental underpinnings of schizophrenia; however, an approach less well travelled is to examine the medical disorders that produce symptoms resembling schizophrenia. This book is the first major attempt to bring together the diseases that produce what has been termed 'secondary schizophrenia'. International experts from diverse backgrounds ask the questions: does this medical disorder, or drug, or condition cause psychosis? If yes, does it resemble schizophrenia? What mechanisms form the basis of this relationship? What implications does this understanding have for aetiology and treatment? The answers are a feast for clinicians and researchers of psychosis and schizophrenia. They mark the next step in trying to meet the most important challenge to modern neuroscience – understanding and conquering this most mysterious of human diseases.
