## CRISTINA LIN

*Baby on Board* EduGorilla Community Pvt. Ltd.

Whenever a student decides to prepare for any examination, her/his first and foremost curiosity arises about the type of questions that he/she has to face. This becomes more important in the context of competitive exams where there is a neck-to-neck race. For this purpose, we feel great pleasure to present this book before you. We have made an attempt to provide

all competitive exams Reasoning chapter-wise and type-wise questions asked in various SSC, Banks, etc. exams from 1999 to 2020 along with their solutions. Features Chapterwise and type-wise collection of past SSC, Banks, and other competitive exams question papers (1999-2020). Each chapter divides the questions into different types - Type 1, Type2 and Type 3 Solutions have been given with enough diagrams, proper reasoning for better understanding. Students must attempt these questions immediately after they complete the chapter in their class/school/home during their preparation.

*Scientifica Pupil Book 7 (Levels 4-7)* Arihant Publications India limited  
 This book is a collection of notes and solved problems about probability theory. The book also contains proposed exercises attached to the solved problems as well as computer codes (in C++ language) added to some of these problems for the purpose of calculation, test and simulation. Illustrations (such as figures and tables) are added when necessary or appropriate to enhance clarity and improve understanding. In most cases intuitive arguments and methods are used to make the notes and solutions natural and instinctive. Like my previous books,

maximum clarity was one of the main objectives and criteria in determining the style of writing, presenting and structuring the book as well as selecting its contents. However, the reader should notice that the book, in most parts, does not go beyond the basic probability and hence most subjects are presented and treated at their basic level. Accordingly, modest mathematical background knowledge is required for understanding most of the contents of the book. In fact, the book in most parts requires no more than a college or secondary school level of general mathematics. So, the intended readers of the book are primarily college (or A-level) students as well as junior undergraduate students (e.g. in mathematics or science or engineering). An interesting feature of the book is that it is written and designed, in part, to address practical calculational issues (e.g. through sample codes and suggested methods of solution) and hence it is especially useful to those who are interested in the calculational applications of the probability theory. The book can be used as a text or as a reference for an introductory course on this subject and may also be used for general reading in mathematics. The book may also be adopted as a source of pedagogical materials which can supplement, for instance, tutorial sessions (e.g. in undergraduate courses on mathematics or science).

### **Introduction to the Probability Theory** YOUTH COMPETITION TIMES

For K-12 general methods courses. Methods for Teaching uses a three-phase model of teaching planning, implementing, and assessing as a framework for fostering a success-oriented K-12 environment by promoting student learning.

*The Differentiated Instruction Book of Lists*  
Carson-Dellosa Publishing

Hundreds of useful ideas for meeting the needs of each child The Differentiated Instruction Book of Lists is the definitive reference for DI for teachers in grades K-12. Ready for immediate use, it offers over 150 up-to-date lists for developing instructional materials, lesson planning, and assessment. Organized into 12 convenient sections, the book is full of practical examples, teaching ideas, and activities that can be used or adapted to meet students' diverse needs.
