Biology McGraw-Hill College Cecie Starr updated every chapter in this concise

introduction to biology with the help of 300 researchers. She organized each basic biology concept on a one- or two-page spread, called a Concept Spread. The carefully written transitions between Concept Spreads help students grasp how each concept fits into the whole story. Visual Preview illustrations depict biological concepts one step at a time, including all major concepts in the text. You can easily integrate the Visual Previews into your lecture using BioLink CD-ROM. As with every revision, Starr's simplified writing presents scientifically sound story lines, tightening the writing overall and expanding selected topics that can be confusing if not presented in sufficient detail. Because Starr thinks a text should be readable, first and foremost, she worked tirelessly to make this Fourth Edition clear, interesting, and engaging. Applications appear throughout the text including Focus on...essays and chapter-opening vignettes. This edition's Applications Index contains more than 1000 entries with links to the applications. Students

can look up any number of topics - such as bioethics or behavior - to find pertinent information. Then they can see how understanding biology helps us interpret the world in which we live. The Interactive Concepts in Biology CD-ROM, free with every new copy of the text, enhances every Concept Spread in the book with animations, sound, video clips, and a speaking glossary. The interactive exercises give students the opportunity to do biology experiments, and chapter-based quizzes allow self-assessment. This CD-ROM has been revised and expanded to accompany the Fourth Edition.

Wolf soon forgets his hunger as he goes from school to library to bookstore. As hungry wolf descends on the farm, he is surprised to find that the animals there are quite well-educated. The only way he can get into the farm is to learn how to read. But acceptance in farm circles is not so easy as the animals present the wolf with one challenge after another. Wolf soon forgets his hunger as he goes from school to library to bookstore.

Inquiry Into Life W. W. Norton & Company
"I have been teaching nonmajors biology at the University of Oklahoma since 1997 and over that time have encountered many students who fear science in general and biology in particular. The complexity, abstractions, and unfamiliar terms can seem overwhelming at first, but with practice, I know that anyone can think like a scientist. Learning to think scientifically is important well beyond passing your biology class. After all, scientific issues confront you every day as you navigate your life and your social media accounts. How do you know if a claim about

climate change is scientific? Will you be able to identify misinformation and interpret graphs during the next global health crisis? This book will teach you not only to understand the scientific terms you encounter but also to distinguish "good science" from unscientific claims. I've created the following features to help you make the transition from memorizing facts to understanding concepts--from accepting scientific claims to analyzing them for yourself. These tools will help you to pass your class and to be an informed citizen"--
