A practical, protocol-oriented guide to the practice of neurology in the hospital setting A Doody's Core Title for 2019! Hospital neurology is one of the fastest growing subspecialties within neurology. Running an efficient and effective neurohospitalist line is important to the financial success of hospitals and the physicians employed there. Many neurology patients also have internal medicine problems, and often it is a general hospitalist without neurology training who treat these patients. These physicians sorely need more information on neurology. Conversely, neurologists caring for these patients have only had one year of internal medicine training and require more guidance on medical problems. Given these realities, there is a need for a resource on hospital neurology. With *The Hospital Neurology Book*, Drs. Salardini and Biller have created a practical, concise, and useful work that guides both neurologists and internists in the areas in which their training is currently not sufficient for hospital practice. *The Hospital Neurology Book* features a highly readable format, providing information physicians can act upon, including recipes and protocols for patient care and question-based chapter headings that lead physicians to the exact issue they are dealing with in the moment. Each chapter (or chapter section as appropriate) opens with a case study, setting the stage in a highly practical manner, and ends with high yield summary points useful for consolidating learning.

"If it is true that a picture is worth a thousand words, a visual memory of a good clinical case will be retained and absorbed in a way that traditional text readings are not. Abundantly illustrated throughout, *Case-Based Neurology* offers an overview of a wide range of common neurological conditions. Organized by chief complaint and presented in a consistent format, each case includes history, "stop and think" questions, physical examination, laboratory testing, imaging findings, diagnosis, and discussion, including differential diagnosis and treatment. References and suggested readings follow for further study. *Case-Based Neurology* provides a broad selection of cases drawn from all major areas of neurology including critical care and trauma, epilepsy, movement disorders, stroke, neurodegenerative diseases, spinal cord pathologies, neuro-oncology, neuromuscular and peripheral nervous system disorders, neuro-immunology, and neuro-infectious diseases. As the reader works through the cases, the importance of careful history taking, thorough examination, and ordering appropriate diagnostic studies is reinforced as it becomes apparent that the same chief complaint can lead to totally different diagnoses. Controversies in management are addressed within the case discussions to highlight differences in treatment philosophy and help sharpen clinical acumen. Features of *Case-Based Neurology* include: Case-based format that simulates clinical situations and builds

diagnostic skills Effective teaching and learning tool - ideal for Board preparation Covers a wide range of common neurological conditions and typical and atypical disease presentations Differential diagnosis, treatment, and controversies in management are incorporated in case discussions Key clinical findings are documented with high-quality images throughout "

Comprehensive Review in Clinical Neurology McGraw Hill Professional This book features case studies of ten individuals with acquired neurological disorders. These disorders have implications for speech, language, and communication, but to date they have not been the focus of research in speech-language pathology. Chapters present a brief medical overview of each condition, followed by detailed linguistic analysis. A carefully assembled narrative captures the impact of each neurological disorder on an individual's daily life and social activities. This structured approach, supported by further reading and exercises, gives readers a nuanced understanding of each disorder's clinical presentation and language and communication features, and the complex interrelationship between language, communication, and cognitive

and motor symptoms. The book will be of interest to students of all levels, researchers, and clinicians in speech-language pathology and related disciplines, including neurology, psychiatry, and psychology.

McGraw Hill Professional The neuro rehab text that mirrors how you learn and how you practice! Take an evidence-based approach to the neurorehabilitation of adult and pediatric patients across the lifespan that reflects the APTA's patient management model and the WHO's International Classification of Function (ICF). You'll study examination and interventions from the body structure/function impairments and functional activity limitations commonly encountered in patients with neurologic disorders. Then, understanding the disablement process, you'll be able to organize the clinical data that leads to therapeutic interventions for specific underlying impairments and functional activity limitations that can then be applied as appropriate anytime they are detected, regardless of the medical diagnosis.
