MacDonald's Atlas of Procedures in Neonatology Lippincott Williams & Wilkins

Few books have been published before with details on preoperative planning, markings and performance of primary surgical techniques to correct the cleft lip and palate deformity. This information is commonly required by surgeons. Scientific papers, conferences, and video clips of these surgical procedures are limited in details about how to address this common disease. This book provides a comprehensive overview of surgery for the correction of primary cleft lip and palate, including planning, selecting the most suitable techniques, markings, performing operative techniques, and preoperative care. Unlike other literature on the topic, which focuses on surgical techniques, this operative atlas (with detailed illustrations) covers the entire spectrum of this congenital deformity: classification of cleft lip and palate, management protocols, unilateral cleft lip surgery, bilateral cleft lip surgery, cleft palate surgery, post operative care and case studies. It will be a unique and valuable resource for surgeons treating this common condition.

The term arthrogryposis describes a range of congenital contractures that lead to childhood deformities. It encompasses a number of syndromes and sporadic deformities that are rare individually but collectively are not uncommon. Yet, the existing medical literature on arthrogryposis is sparse and often confusing. The aim of this book is to provide individuals affected with arthrogryposis, their families, and health care professionals with a helpful guide to better understand the condition and its therapy. With this goal in mind, the editors have taken great care to ensure that the presentation of complex clinical information is at once scientifically accurate, patient oriented, and accessible to readers without a medical background. The book is authored primarily by members of the medical staff of the Arthrogryposis Clinic at Children's Hospital and Medical Center in Seattle, Washington, one of the leading teams in the management of the condition, and will be an invaluable resource for both health care professionals and families of affected individuals.
