*Luoghi e comunità* OECD Publishing

This book presents the new EU approach to environmental management and its attempt to place it in the perspective of sustainable development. Written by eminent scientists working on sustainable development, the book covers not only theoretical aspects but also gives practical cases and examples. China and other large and fast growing economies are putting increasing pressures on the global environment, but they are also looking at the European experience with great interest.

**Eco-Cities** Egea Spa - Bocconi University Press

This report reflects long-term, in-depth discussion and debate by participants in the Latin American Roundtable on Corporate Governance.

**Post-Metropolitan Territories** Yale University Press  
Harlem is flourishing. Many say a second Renaissance is happening above 120th Street. Magic Johnson opened a major theater, Bill Clinton has centered his post-presidential offices there, countless homes have been restored to their former glory, and, not without controversy, many whites are flocking to the neighborhood. But what will this gentrification do to Harlem, and how will it change life for Harlem's longtime residents? As communities and businesses struggle with differing motivations and needs, David Murrasse looks at ways they can work together to form partnerships. Listening to Harlem offers an

exciting portrait of the struggles confronting one of America's most important neighborhoods. This engaging read will appeal to anyone with an interest in how the neighborhood is faring today, as well as those involved professionally and socially in urban development.

*The Routledge Companion to Urban Regeneration* Westview Press

This open access book presents current knowledge about ecosystem services (ES) in urban planning, and discusses various urban ES topics such as spatial distribution of urban ecosystems, population distribution, and physical infrastructure properties. The book addresses all these issues by: i) investigating to what extent ecosystem services are currently included in urban plans, and discussing what is still needed to improve planning practice; ii) illustrating how to develop ecosystem services indicators and information that can be used by urban planners to enhance plan design; iii) demonstrating the application of ES assessments to support urban planning processes through case studies; and iv) reflecting on criteria for addressing equity in urban planning through ecosystem service assessments, by exploring issues associated with the supply of, the access to and demand for ES by citizens. Through fully worked out case studies, from policy questions, to baseline analysis and indicators, and from option comparison to proposed solutions, the book offers readers detailed and accessible coverage of outstanding issues and proposed solutions to better integrate ES in city planning. The overall purpose of the book is to provide a compact reference that can be used by researchers as a key resource offering an updated perspective and overview on the field, as well as by practitioners and planners/decision makers as a source of

inspiration for their activity. Additionally, the book will be a suitable resource for both undergraduate and post-graduate courses in planning and geography.

*IFLA Public Library Service Guidelines* Springer

This book offers an overview of international trade theory from a new perspective, concentrating on recent contributions that provide insights helping to explain the present structure of international exchanges of goods and services and the forces - not only economic, but also technological, political, psychological and historical - that are shaping it. Current trade theory is still largely centred on the Ricardo's principle of comparative advantages and the Heckscher-Ohlin theory of factor proportions. Trade theory has left out of the picture some fundamental factors, such as power asymmetries between economic actors and the relevance of standards and networks, that shape contemporary trade flows, largely because these factors could not be precisely specified and measured so as to be incorporated into the standard analytical apparatus of economic theory.

*Urban Resilience for Risk and Adaptation Governance* Dismissioni commerciali e resilienza. Nuove politiche di rigenerazione urbana Aree militari dismesse e rigenerazione urbana

This unique volume offers insights from renowned experts in energy efficient building from the world over, providing a multi-faceted overview of the state-of-the-art in energy efficient architecture. It opens by defining what constitutes a sustainable building, suggesting bases for sorely needed benchmarks, then explains the most important techniques and tools available to engineers and architects exploring green building technologies. It covers such pivotal issues as daylighting, LED lighting,

integrating renewables such as solar thermal and cooling, retrofitting, LEED and similar certification efforts, passive houses, net-zero and close-zero structures, water recycling, and much more. Highlighting best practices for commercial buildings and private homes, in widely varied climates and within vastly different socio-economic contexts, this illustrated reference will guide architects and engineers in making sustainable choices in building materials and methods. Explains the best methods and materials to support energy efficient building Features case studies by experts from a dozen countries, demonstrating how sustainable architecture can be achieved in varied climates and economies Covers both new constructions and retrofitting of existing structures

Why the Garden Club Couldn't Save Youngstown Springer

Making Prestigious Places investigates the spatial dimension of luxury, both as a sector involving activities, operators and investments, and as a system of values acting as a catalyst for recent urban transformations. Luxury shares a well-established connection to the city, as a place of production, consumption and self-representation, and continues to grow despite economic difficulties. This edited collection includes case studies from Europe, North and South America, Asia and the Middle East to create a dialogue around these developments and the challenges presented, such as the tension between the idea of prestige and current values in urban planning, the discussion between academic reflections and operational practices, and how these interact with the long-term economic and social dynamic of the city. With rich analysis and a preface written by Patsy Healey, this book will be an important addition to the discourse on luxury for

urban planners and researchers.

*Urban Regeneration in Europe* Springer Science & Business Media

Look out for David Owen's next book, *Where the Water Goes*. A challenging, controversial, and highly readable look at our lives, our world, and our future. Most Americans think of crowded cities as ecological nightmares, as wastelands of concrete and garbage and diesel fumes and traffic jams. Yet residents of compact urban centers, Owen shows, individually consume less oil, electricity, and water than other Americans. They live in smaller spaces, discard less trash, and, most important of all, spend far less time in automobiles. Residents of Manhattan—the most densely populated place in North America—rank first in public-transit use and last in percapita greenhouse-gas production, and they consume gasoline at a rate that the country as a whole hasn't matched since the mid-1920s, when the most widely owned car in the United States was the Ford Model T. They are also among the only people in the United States for whom walking is still an important means of daily transportation. These achievements are not accidents. Spreading people thinly across the countryside may make them feel green, but it doesn't reduce the damage they do to the environment. In fact, it increases the damage, while also making the problems they cause harder to see and to

address. Owen contends that the environmental problem we face, at the current stage of our assault on the world's nonrenewable resources, is not how to make teeming cities more like the pristine countryside. The problem is how to make other settled places more like Manhattan, whose residents presently come closer than any other Americans to meeting environmental goals that all of us, eventually, will have to come to terms with.

**Green Metropolis** Routledge

Processes of multi-scalar regional urbanization are occurring worldwide. Such processes are clearly distinguishable from those of the nineteenth and twentieth centuries due to the shifting concepts of both the city and the metropolis. International literature highlights how what we have historically associated with the idea of cities has long been subjected to consistent reconfiguration, which involves stressing some of the typical features of the idea of "cityness". *Post-Metropolitan Territories: Looking for a New Urbanity* is the product of a research project funded by the Italian Ministry for Education, Universities and Research (MIUR). It constitutes a thorough overview of a country that is one of Europe's most diverse in terms of regional development and performance: Italy. This book brings together case studies of a number of Italian cities and their hinterlands and looks at new forms of urbanization, exploring themes of sustainability, industrialization, de-industrialization, governance, city planning and quality of life. This volume will be of great interest to academics and students who study regional development, economic geography and urban studies, as well as civil servants and policymakers in the field of spatial planning, urban policy, territorial policies and governance.

*Sustainability, Energy and Architecture* Routledge

This book presents an original methodology for analyzing urban retail systems, addressing the strong retail meltdown (increase in closed corner-shops and dead malls) that is severely affecting cities and suburban areas in Europe and the USA. Taking into account both spatial and regulative aspects, it offers a new approach to retailing and retail spaces developed within the urban planning field. The book describes international case studies together with solutions to the problem of vacant retail spaces, and provides a comprehensive toolbox of guidelines useful to local and regional governments facing the problem of retail meltdown. As such, it is of interest to architects, engineers, urban planners, decision-makers and government representatives. It also provides a valuable methodological reference resource for researchers engaged in this particular field of study.

*Augmented Urban Spaces* Emerald Group Publishing

In the past decade, urban regeneration policy makers and practitioners have faced a number of difficult challenges, such as sustainability, budgetary constraints, demands for community involvement and rapid urbanization in the Global South. Urban regeneration remains a high profile and important field of government-led intervention, and policy and practice continue to adapt to the fresh challenges and opportunities of the 21st century, as well as confronting long standing intractable urban problems and dilemmas. This Companion provides cutting edge critical review and synthesis of recent conceptual, policy and practical developments within the field. With contributions from 70 international experts within the field, it explores the meaning

of 'urban regeneration' in differing national contexts, asking questions and providing informed discussion and analyses to illuminate how an apparently disparate field of research, policy and practice can be rendered coherent, drawing out common themes and significant differences. The Companion is divided into six sections, exploring: globalization and neo-liberal perspectives on urban regeneration; emerging reconceptualizations of regeneration; public infrastructure and public space; housing and cosmopolitan communities; community centred regeneration; and culture-led regeneration. The concluding chapter considers the future of urban regeneration and proposes a nine-point research agenda. This Companion assembles a diversity of approaches and insights in one comprehensive volume to provide a state of the art review of the field. It is a valuable resource for both advanced undergraduate and postgraduate students in Urban Planning, Built Environment, Urban Studies and Urban Regeneration, as well as academics, practitioners and politicians.

**Planning for Ecosystem Services in Cities** Routledge

The public library is the prime community access point designed to respond to a multitude of ever-changing information needs. These guidelines are framed to provide assistance to library and information professionals in most situations. They assist to better develop effective services, relevant collections, and accessible formats within the context and requirements of the local community. In this exciting and complex information world it is important for professionals in search of knowledge, information and creative experience to succeed. This is the 2nd edition of The Public Library Service IFLA/UNESCO Guidelines for Development. [Inquiry and Change](#) John Wiley & Sons

Waterfronts Revisited addresses the historical evolution of the relationship between port and city and re-examines waterfront development by looking at the urban territory and historical city in their complexity and entirety. By identifying guiding values, urban patterns and typologies, and local needs and experiences, cities can break the isolation of the harbor by reconnecting it to the urban structure; its functions, spaces and forms. Using the UNESCO recommendation for the "Historic Urban Landscape" as the guiding concept and a tool for managing urban preservation and change, this collection of essays illustrates solutions to issues of globalisation, commercialization of space and commoditisation of culture in waterfront development. Through sixteen selected case studies, Editors Heleni Porfyriou and Marichela Sepe offer planners and urban designers a broad spectrum of alternative solutions to waterfront regeneration interventions and redevelopments, addressing sustainability, regional cultural diversity, and the debate between conservation and transformation.

**From Place to Place** Common Ground Publications

The book includes new theory, original empirical evidence, and applied case studies synthesizing advances in innovation and technology for the retail sector. Chapters identify the challenges retailers face in response to new practices, suggesting how the sector can respond to technological developments, ethical considerations and privacy issues.

**When I Have a Little Girl** FrancoAngeli

Historic Urban Landscape is a new approach to urban heritage management, promoted by UNESCO, and currently one of the most debated issues in the international preservation community.

However, few conservation practitioners have a clear understanding of what it entails, and more importantly, what it can achieve. Examples drawn from urban heritage sites worldwide – from Timbuktu to Liverpool Richly illustrated with colour photographs Addresses key issues and best practice for urban conservation

**Waterfronts Revisited** FrancoAngeli

Winner of the American Political Science Association's 1991 Woodrow Wilson Foundation Book Award for the best book published in the United States during 1990 on government, politics, or international affairs How do ordinary citizens, government officials, opinion leaders, or social scientists attempt to solve social problems? How competent are we at defining the problems, seeking information, and finding answers? In this important and controversial book, a distinguished social scientist meticulously analyzes our attempt to understand society so that we can reshape it. In so doing, he largely bypasses both epistemology and contemporary highly abstract theory on knowledge and society in order to achieve a far more concrete analysis of discourse and inquiry in social problem solving. There is a tragic discrepancy, argues Charles E. Lindblom, between our abilities to solve problems and the difficulty of the problems to be solved. We must make do with inadequate information and inconclusive analyses, for the task is less one of learning the truth than of proceeding in inquiry and decisions when the truth cannot be known. Lindblom discusses the many obstacles that prevent us from solving social problems, focusing in particular on learned incompetence. According to Lindblom, parents teach children not to think certain thoughts, and schools often engage

more in indoctrination than education. Political rhetoric and commercial sales promotion feed a steady diet of misrepresentation. Social science does help. But because it is dependent on popular thought, it shares the impairments of thought found in both political figures and ordinary citizens. It also develops its own distinctive impairments and is to a degree crippled by its narrow view of scientific method--often more interested in proving than probing. Although social science can be improved in ways that Lindblom outlines in his book, social inquiry calls for such significant contributions from lay thought that it renders many conventional ideals of scientific problem solving inappropriate. Lindblom contends that the route to better social problem solving is not through either scientific or popular consensus or agreement, however much they are valued in the world of science and social science, but through a competition of ideas. The index of a society's competence, he states, is in its discord over ends, values, or purposes. "As usual, Lindblom cuts through to the core of the issue: How is society to understand its central problems and challenges? With originality and courage, he takes on the social scientists and the policy analysts, and presents an inspiring picture of a self-guiding democracy that continuously deliberates over means and ends. A signal contribution."--Robert B. Reich, Harvard University

*Aree militari dismesse e rigenerazione urbana* Addison-Wesley Educational Publishers

Il volume si propone di indagare percorsi sostenibili che conducono all'attivazione di pratiche di resilienza e di

rigenerazione socio-territoriale di spazi “critici” o sottoutilizzati, grazie al coinvolgimento diretto delle comunità locali. La varietà delle esperienze qui presentate si inserisce infatti nel quadro dei paradigmi della sostenibilità e della rigenerazione, i quali conferiscono al volume una cornice epistemologica coerente, che trova applicazione nell’analisi di esperienze e iniziative avviate nel contesto esteso della regione urbana milanese, diventando quest’ultimo laboratorio d’elezione nelle pratiche di risignificazione spaziale avviate dalle comunità e dai soggetti istituzionali locali. Alla base di tali esperienze si pone un forte tratto comune, rappresentato dall’impegno profuso e dalla spinta utopistica che conduce le comunità a far rivivere e risignificare i luoghi, capaci di rispondere a certe urgenze collettive non più procrastinabili. Gli Autori analizzano quattro casi di studio diversi,

con l’obiettivo di restituire al lettore, seppur in misura parziale, la complessità delle relazioni attraverso strumenti di indagine quali-quantitativi tipici delle scienze socio-territoriali come documenti cartografici e fotografici, questionari, interviste in profondità e osservazione partecipante: dalle pratiche di agroforestazione rigenerativa in essere al margine sud-orientale della città, alle iniziative di rivitalizzazione commerciale del quartiere Isola; dai giardini condivisi presenti diffusamente all’interno del perimetro urbano milanese fino ai processi di delocalizzazione delle comunità residenti attorno alla grande infrastruttura aeroportuale di Malpensa.
