A chapter is dedicated to the postoperative management of filtering procedures. Further chapters review the role of the ocular surface and the issue of modulation of the scarring processes in glaucoma surgery. The second section covers some promising new devices and techniques. The final part addresses the surgical approaches to some specific clinical challenges: angle-closure glaucoma, concomitant cataract and glaucoma, pediatric glaucoma, and refractory glaucomas. Strabismus Surgery: Basic and Advanced Strategies is an addition to the field of eye muscle surgery that combines the work of four leading ophthalmologists, representing the teaching from some of the premier pediatric ophthalmology/strabismus fellowship training programs in the United States. The emphasis of this book is not on the nuts and bolts of how to perform strabismus surgery, but rather on what, why, and when to do it. In short, the authors share their experiences and, by extension, that of their many mentors to provide systematic coverage of surgical strategies and important examination techniques for anyone performing strabismus surgeries. Included are strategies for surgical planning for everything from common horizontal muscle recession to the most challenging restrictive, paretic, or oblique muscle reoperation. In a unique roundtable type format, each author was given the opportunity to comment on the work of the other authors, which helps insure a balanced approach with alternative workable strategies when appropriate. The book's value is further enhanced by the contributions and commentary of two of the world's most revered strabismologists of the twentieth century -- Marshall M. Parks and Gunter K. von Noorden. Their contributions include helpful pearls of wisdom and historical vignettes derived from their combined nearly 100 years of experience in this field. Anyone with an interest in strabismus surgery will enjoy reading this book. Book jacket.
