The aim of each volume of this series Guides to Information Sources is to reduce the time which needs to be spent on patient searching and to recommend the best starting point and sources most likely to yield the desired information. The criteria for selection provide a way into a subject to those new to the field and assists in identifying major new or possibly unexplored sources to those who already have some acquaintance with it. The series attempts to achieve evaluation through a careful selection of sources and through the comments provided on those sources.

The westernized university is a site where the production of knowledge is embedded in Eurocentric epistemologies that are posited as objective, disembodied and universal and in which non-Eurocentric knowledges, such as black and indigenous ones, are largely marginalized or dismissed. Consequently, it is an institution that produces racism, sexism and epistemic violence. While this is increasingly being challenged by student activists and some faculty, the westernized university continues to engage in diversity and internationalization initiatives that reproduce structural disadvantages and to work within neoliberal agendas that are incompatible with decolonization. This book draws on decolonial theory to explore the ways in which Eurocentrism in the westernized university is both reproduced and unsettled. It outlines some of the challenges that accompany the decolonization of teaching, learning, research and policy, as well as providing examples of successful decolonial moments and processes. It draws on examples from universities in Europe, New Zealand and the Americas. This book represents a highly timely contribution from both early career and established thinkers in the field. Its themes will be of interest to student activists and to academics and scholars who are seeking to decolonize their research and teaching. It constitutes a

decolonizing intervention into the crisis in which the westernized university finds itself. *Manitoba Law Journal: A Review of the Current Legal Landscape 2011 Volume 35(1)* JHU Press
 Much of the psychological research in the last century has been conducted in the global North West; hence, many prevailing theories and methodologies reflect the philosophical framework and shared cultural knowledge of this region. Other world views and cultural contexts have, as yet, not had the same opportunity to develop scientific insights that come to the attention of global audiences. Psychology Education and Training is the first truly international effort to generate a framework for common standards in psychological education and training across the globe. Psychologists have long studied human beings in their socio-cultural context. New challenges such as globalisation and the relationship of the brain and behavior require that education and training keep pace with these rapidly evolving developments. The chapters in this book were generated by an international conference which resulted in the Dornburg Accord. While anchored in higher education, the focus is on the generative and translational psychological science needed to fulfill psychology's responsibility to society. Psychology Education and Training is the first book of its

kind to cover both historic strengths and the requirements of emerging fields. The book deals with balancing the universalities and cultural specificities of psychological processes, the adjustments to academic curricula required to support national needs, as well as the credentials and regulations required to assure the quality of psychological services. Psychology Education and Training is unique in providing initial data and concurrent assessment of various components of education and training in psychology across the globe. The book is a must for faculty members, advanced students of psychology and policy-makers who are interested in the issues that shape their societies.

This book, from ethical, interdisciplinary, and African perspectives, unveils the root causes of the increasing land disputes. Its significance lies upon the effort of presenting a broad overview founded upon a critical analysis of the existing land-related disputes. It is a perspective that attempts to evaluate the renewed interest in evolving theories of land rights by raising questions that can help us to understand better differences underlying land ownership systems, conflict between customary and statutory land rights systems, and the politics of land reform. Other dimensions explored in the book include the market influence on land-grabbing and challenges accompanying trends of migration, resettlement, and integration. The methodology applied in the study provides a perspective that raises questions intended to identify areas of contention, dispute, and conflict. The study, which could also be categorized as a critical assessment of the African land rights systems, is intended to be a resource for scholars, activists, and organizations working to resolve land-related disputes.

How do we make sense of the social problems that continue to plague Canadian society? Our understanding of issues such as poverty, racism, violence, homophobia, crime and pollution stems from our view of how society is structured. From the dominant neoliberal perspective, social problems arise from individuals making poor choices. From a critical perspective, however, these social troubles are caused by structural social inequalities. Disparities in economic, social and political power — that is, relations of power based on class, race, gender and sexual orientation — are the central structural element of capitalist, patriarchal, colonialist societies. The contributors to *Power and Resistance* use this critical perspective to explore Canadian social issues such as poverty, colonialism, homophobia, violence against women, climate change and so on. This sixth edition adds chapters on the corporatization of higher education, the lethal impacts of colonialism, democracy, the social determinants of health, drug policy and sexual violence on campus.

Research on the Self relates to various phenomena including self-esteem, self-concept, self-verification, self-awareness, identity, self-efficacy, passion, self-determination, goals etc. that are predictive of optimal functioning and well-being. Such a research endeavor is consistent with the positive psychology movement focusing on the scientific study of what makes people psychologically healthy, happy, and satisfied in their lives, as well as on their strengths and virtues. The positive psychology movement cultivates a sensible approach to optimal human functioning and well-being in various life contexts. Chapters in this volume will illustrate some of the best of the research on the interplay between the self and positive psychology, to show the potential of this research for transforming our societies. *SELF - Driving Positive Psychology and Well-being* thus provides a unique insight into self and its fundamental role for well-being. This volume is intended to develop both theoretical and methodological ideas and to present empirical evidence of various phenomenon important for well-being. The scope of the volume is thus very broad, and provides a framework for the development of the chapter as authors see most appropriate.

In what ways is climate change political? This book addresses this key - but oddly neglected - question. It argues that in order to answer it we need to understand politics in a three-fold way: as a site of authoritative, public decision-making; as a question of power; and as a conflictual phenomenon. Recurring themes center on de- and re-politicization, and a tension between attempts to simplify climate change to a single problem and its intrinsic complexity. These dynamics are driven by processes of capital accumulation and their associated subjectivities. The book explores these arguments through an analysis of a specific city - Ottawa - which acts as a microcosm of these broader processes. It provides detailed analyses of conflicts over urban planning, transport, and attempts by city government and other institutions to address climate

change. The book will be valuable for students and researchers looking at the politics of climate change.

This is an open access book. The aim of 2022 6th International Seminar on Education, Management and Social Sciences (ISEMSS 2022) is to bring together innovative academics and industrial experts in the field of Education, Management and Social Sciences to a common forum. The primary goal of the conference is to promote research and developmental activities in Education, Management and Social Sciences and another goal is to promote scientific information interchange between researchers, developers, students, and practitioners working all around the world. The conference will be held every year to make it an ideal platform for people to share views and experiences in Education, Management and Social Sciences and related areas.

What does it mean to live beside an eroding democracy? As this powerful and timely book argues, that question will define the next generation of Canadian politics. As a congressional staffer in the United States, Rob Goodman watched firsthand as a rising authoritarian movement disenfranchised voters, sabotaged institutions, and brought America to the brink of a coup. Now, as a political theorist who makes his home in Canada, he has an urgent warning for his adopted country: The same forces that have upended democracy in America and around the world are on the move in Canada, too. But we can protect our democracy by drawing on a set of political, cultural, and historical resources that are distinctly of this place. In *Not Here*, Goodman outlines four such resources. First, the rejection of the dangerous idea of one "real" Canadian people. Second, the refusal of political charisma and founder-worship. Third, a set of social programs—embattled but still standing—that empower neighbours to see one another as equals. And fourth, Canada's longstanding search for an identity separate from the great power with which it shares a continent. Today, that great power is a democracy in decline, and so defending what makes Canada distinct matters more now than ever before. Canadian difference is not a curiosity, a luxury good, or a vanity item. It is a democratic immune system. Laying bare the historical roots of today's politics and making an urgent case for action, *Not Here* is a roadmap for safeguarding a democracy under unprecedented threat.

Refugee Pathways to Freedom Springer Nature

In tracing the origins of the modern human-rights movement, historians typically point to two periods: the 1940s, in which decade the Universal Declaration of Human Rights (UDHR) was ratified by the United Nations General Assembly; and the 1970s, during which numerous human rights nongovernmental organizations (NGOs), most notably Amnesty International and Médecins Sans Frontières, came into existence. It was also in the 1970s, Sarita Cargas observes, when the first classes in international human rights began to be taught in law schools and university political science departments in the United States. Cargas argues that the time has come for human rights to be acknowledged as an academic discipline. She notes that human rights has proven to be a relevant field to scholars and students in political science and international relations and law for over half a century. It has become of interest to anthropology, history, sociology, and religious studies, as well as a requirement even in social work and education programs. However, despite its interdisciplinary nature, Cargas demonstrates that human rights meets the criteria that define an academic discipline in that it possesses a canon of literature, a shared set of concerns, a community of scholars, and a methodology. In an analysis of human rights curricula in Australia, Canada, the United Kingdom, and the United States, Cargas identifies an informal consensus on the epistemological foundations of human rights, including familiarity with human rights law; knowledge of major actors including the United Nations, governments, NGOs, and multinational corporations; and, most crucially, awareness and advocacy of the rights and freedoms detailed in the articles of the UDHR. The second half of the book offers practical recommendations for creating a human rights major or designing courses at the university level in the United States.

Power and Resistance debunks the dominant neoliberal, hyper-individualist approach to society's problems that sees poverty as a result of laziness, environmental crises as a result of market demands for products that pollute, and Indigenous Peoples' struggles as a result of not assimilating. We argue that it is social inequality and oppression that are the underlying causes of social problems. In a society like ours, powerful groups make choices that benefit them and force those choices onto others, creating life problems for others and society as a whole. The powerful also have influence over what is and is not called a "social problem." Solving social problems requires changing the structures of inequality and oppression. For example, industrial corporate agriculture has created huge profits for a few gigantic food corporations but left much of the world hungry. But farmers and their allies are pushing back through agroecology — an agriculture based on local, small-scale, ecologically sustainable farming that brings eaters and growers closer to one another. The seventh edition of *Power and Resistance* includes new chapters on anti-Black racism in schools, Indigenous people and mental health, food security and sovereignty, and work in the gig economy.

The comprehensive approach has been a new emerging phenomenon within the field of strategic studies, national security, and international defence. Former NATO secretary-general Rasmussen posited that this approach not only makes sense it is necessary. Yet with the rise of asymmetric warfare and the emergence of new constructs, the comprehensive approach is not supported by a necessary framework, model, or theory. Indeed, if the military alone is unable to solve the root cause of conflicts, then other elements of national and international power must collaborate more closely. In *SynergyA Theoretical Model of Canadas Comprehensive Approach*, author, senior lecturer and strategic management consultant Eric Dion proposes a theoretical model for this new approach: How can such an integrated decision-making model be constructed for the comprehensive approach? Where and when, who and with whom, what, how, why, and to what effect can such a model be employed? *Synergy* answers these questions with an integrated theoretical model constructed of six management dimensions: the situational context, the sociocultural, the organisational structure, the strategic policies, the systemic processes, and the synergy dynamics. Together, these six dimensions fundamentally represent what would be the basic constructs for a more integrated theoretical model of the comprehensive approach. Taking a strategic management perspective on the comprehensive approach can open new perspectives within the field of national security and defence, a field traditionally dominated by political science and international relations. In the end, synergy appears to better explain the complex dynamics at play within the comprehensive approach.

Power and Resistance, 7th ed. Routledge

This is an open access book. With the progress of social civilization, social science and its research are becoming more and more important. Theoretically and practically, the study of social phenomena and social problems and the development of prosperous social sciences are the eternal themes of human beings. At present, social science research and its results can hardly meet the needs of social development, especially the unscientific evaluation of social science results, which has aroused great concern from all walks of life, and has produced dirt and questions on social science, thus affecting the proper development of social science. Max Weber once said that "the most important function of social science in modern times is to keep people "clear-headed" and to resist the delusions of "prophetic legislators". " Humanities and arts are the process of perceiving, realizing, thinking, manipulating, and expressing objective or subjective objects through capturing and excavating, feeling and analyzing, integrating and applying, or displaying the stage results in the form obtained through feeling (seeing, hearing, smelling, touching). The social sciences and humanities and arts contain content that will directly affect our lives and the way society functions. And by reacting to today's increasingly intricate problems and situations through systematic and professional discussions, they will further contribute to the improvement of institutions and the development of society. By thinking about issues and looking at problems and the world from different perspectives by putting the two together, it may be possible to have more comprehensive, appropriate, and better responses; for example, the

development of laws requires a deeper understanding of the environment in which they are implemented; international trade requires a certain understanding of the customs of different countries; and the development of tax and economic policies requires a certain understanding of the population, consumer demand, etc.

The first book to address the challenges and opportunities for women, especially from underrepresented communities, in wildlife professions. *Women in Wildlife Science* is dedicated to the work of promoting diversity, equity, and inclusion in the field of wildlife conservation and management. Editors Carol L. Chambers and Kerry L. Nicholson have collaborated with a diverse group of contributors to review the history, analyze the status, and celebrate the achievements of women in wildlife science. They share proven models and proposals for new methods to increase the inclusion of women in wildlife professions based on an intersectional framework. Centering perspectives from LGBTQ, BIPOC, Indigenous, and other marginalized communities, *Women in Wildlife Science* is a groundbreaking and vitally important book. Covering academic and professional spheres, the book lays bare the challenges women face entering and excelling in the field of wildlife conservation and management, illustrated by personal stories of struggle and victory, and grounded in peer-reviewed scientific literature unavailable anywhere else. In order to move the discourse around diversity in the wildlife profession forward, the team of contributors Chambers and Nicholson have assembled tackle pivotal issues, from recruitment into academic programs to hiring practices and supporting career advancement in federal, state, local, tribal, and

private sectors. Opening with the stories of wildlife's founding women, and a concise presentation of facts and figures clarifying recent trends and the current state of women in the field, the heart of the book is then dedicated to sharing practical advice about how to increase, recognize, and encourage women's contributions. Each chapter includes original exercises constructed to help administrators, educators, managers, allies, and mentors move intentions into action. Focused attention is given to mentoring early career professionals, Indigenous women, and Women of Color. *Women in Wildlife Science* is a pragmatic guide to ensuring a more diverse, just, and equitable future for a workforce dedicated to preserving not just wildlife but the very fabric of the natural world.

Written by more than 60 contributors who depict the remarkable transformation of the public management profession by computers, this book presents the historical, institutional, legal, organizational, functional, policy, and theoretical background that constitutes IT literacy for public service. The book describes the application of IT to training, budgeting, and policy simulation at the federal level, and to community planning, community telecommunications, and welfare at the state level. Providing a broad and timely overview of IT as it applies to the public sector the book collects critical knowledge and delivers insight into contemporary uses of IT in the public sphere.

Citizenship in a Connected Canada Springer Nature

This collection turns a spotlight on gender innovation in the social sciences. Eighteen short and accessibly written case studies show how feminist and gender perspectives bring new concepts,

theories and policy solutions. Scholars across five disciplines— economics, history, philosophy, political science and sociology – demonstrate how paying attention to gender can sharpen the focus of the social sciences, improve the public policy they inform, and change the way we measure things. Gender innovation provokes rethinking at both the core and the margins of established disciplines, sometimes developing alternative fields of research that chart new territory. These case studies celebrate the contribution of feminist and gender scholars and span topics ranging from budgeting, electoral systems and security studies to the ethics of care, emotional labor and climate change.

Living Dead in the Pacific Routledge

Border culture emerges through the intersection and engagement of imagination, affinity and identity. It is evident wherever boundaries separate or sort people and their goods, ideas or other belongings. It is the vessel of engagement between countries and peoples—assuming many forms, exuding a variety of expressions, changing shapes—but border culture does not disappear once it is developed, and it may be visualized as a thread that runs throughout the process of globalization. Border culture is conveyed in imaginaries and productions that are linked to borderland identities constructed in the borderlands. These identities underlie the enforcement of control and resistance to power that also comprise border cultures. Canada's borders in globalization offer an opportunity to explore the interplay of borders and culture, identify the fundamental currents of border culture in motion, and establish an approach to understanding how border culture is placed and replaced in globalization.
