Performance CRC Press Modern Power Station Practice, Volume 3: Mechanical (Turbines and Auxiliary Equipment) focuses on the development of turbines and auxiliary equipment used in power stations in Great Britain. Topics covered include thermodynamics and steam turbine theory; turbine auxiliary systems such as lubrication systems, feed water heating systems, and the condenser and cooling water plants. Miscellaneous station services, and pipework in power plants are also described. This book is comprised of five chapters and begins with an overview of thermodynamics and

steam turbine theory, paying particular attention to types of turbines, construction of steam turbine cylinders and rotors, and gas and hydraulic turbines. The following chapters look at turbine auxiliary systems such as glands and sealing systems, lubrication systems, governors and governing gear; feed water heating systems, feed heater arrangement, and regenerative cycle calculations; and design and construction of condensers. The final chapter is devoted to miscellaneous station services and pipework in power plants and discusses water services, compressed air services, heating and ventilation, and miscellaneous cranes and lifting tackle. This volume will be of interest to power station engineers.

Kalmbach Publishing, Co. Embedding memories into landscape. Measuring moisture, pressure and wind speed within a bedroom. Drawing power with a potato. These are but a few of the preoccupations described within this book. 'Devices' is a manual celebrating

the invention of architectural and spatial machines. Nostalgic, metaphorical, analytical or even the down-right daft, each of the illustrated pieces demonstrates the potential for spatial occupation, leading to new territories in architectural design. A detailed analysis of each device and a 'recipe' for its construction is provided, including working drawings, assembly diagrams, materials and component descriptions. The reader will not only gain an insight into the technical makeup of the devices, but will have all the information at their fingertips to design and construct ground-breaking innovations of their own. With over 40 devices, this book will inspire architects, designers, engineers and artists alike.

Linear Accelerators for Radiation Therapy, Second Edition focuses on the fundamentals of accelerator systems, explaining the underlying physics and the different features of these systems. This edition includes expanded sections on the treatment head, on x-ray production via multileaf and dynamic collimation for the production of wedged and other intensity modulated beams, on electron scattering systems, and on dosimetry. With high-quality illustrations and practical examples throughout, it contains a detailed description of electron beam optics and linear accelerator components. The final chapter explains how to use other equipment, such as scanners and simulators, in conjunction with linear accelerators for optimum treatment of cancers.

Marine Auxiliary Machinery, Seventh Edition is a 16-chapter text that covers the significant advances in marine auxiliary machinery relevant to the certification of competency examinations. The introductory chapters deal with the basic components of marine machineries, such as propulsion system, heat exchanger, valves, and pipelines. The succeeding

chapters describe the pumps and pumping system, specifically the tanker and gas carrier cargo pumps. Considerable chapters are devoted to the operation of machinery's major components, including the propeller shaft, steering gear, auxiliary power, bow thrusters, and stabilizers. Other chapters consider the refrigeration, heating, ventilation, and air conditioning systems. The final chapters tackle the safety system of marine auxiliary machinery, particularly the fire protection, safety, instrumentation, and control systems. This book will prove useful to marine and mechanical engineers.

The Price of My Dream is a book about building a large company and following a personal dream. All too often, books on business-speak about great successes but seldom on the difficulties and the price some people pay to accomplish their dreams. This book tells of such a story "one man learning the ways of self-reliance through the wilderness of business and coping with failure. The Cap-it story began

with a dream of building a chain of franchise truck accessory stores throughout North America. It seduced Hank Funk with thoughts of grandeur, but soon would shake him with fear. This obsession with success spread over 27 years and tested his faith and took him through a spiritual pilgrimage of asking questions. Man has his plans, and God has His plans, and man's plans don't matter. How do you blend business laws with God's laws? I opened up a book today and found it's main character was a passionate, determined pioneer named Hank Funk. Page after page illustrated the ups and downs of a man with an insatiable appetite for innovation, adventure and business. After the final page was turned I realized Hank's story was the life I wanted to live. A life of passionately pursuing every moment in the adventure God gives me on this earth. -Dave Klassen, National Director Athletes in Action Hank has written a primer for budding entrepreneurs that illustrates the setbacks and anguish that can be part of the path to success; and how faith, hard work, and determination can get you

to your goals. -Madeleine Hardin, M.A., M.Ed

Thermoforming is a processing technique involving air pressure applied to heated plastic, and combines the earlier terminology of vacuum-formed and pressure-formed operations. A specialist in thermoforming, mechanical engineer Rosen describes the roll-fed process, properties of plastic materials, designing products, thermoforming machines, trim presses, knife-like trim dies, and off-line punch-and-die trimming. Chapters on molds cover mold design, system components, layout and base design, and cost estimating. Annotation copyrighted by Book News, Inc., Portland, OR
