Doctors Pellet, Cannoni and Pech have
joined forces to write a masterly work on
the subject of otoneurology and

tumors of the base of the skull. The
anatomic illustrations, derived from their
meticulous dissections, are of excellent
quality and a credit to the famed
tradition of French neuroanatomists of
the past. It is evident that the operative
techniques described by these surgeons
indicate that they have spent a great
deal of time in the dissecting-room and

that they have completely mastered the temporal bone. A perfect knowledge of the fundamental anatomy of the petrous bone is essential before embarking on the difficult surgical procedures in this region of the brain and base of the skull. Reading this work makes it abundantly clear that the results of this type of surgery are vastly improved when neurosurgeons and otologists combine their skills. Each of these specialists brings his unique experience and entire knowledge to the operation for the greater benefit of the patient. We wish to congratulate Doctors Pellet, Cannoni and Pech on the publication of this excellent work. March 1990 William F. House, MD William E. Hitselberger, MD Contents Introduction Basic

As the global population grows and incomes in poor countries rise, so too, will the demand for food, placing additional pressure on sustainable food production. Climate change adds a further challenge, as changes in temperature and precipitation threaten agricultural productivity and the capacity to feed the world's population. This study assesses how serious the danger to food security might be and suggests some steps policymakers can take to remedy the situation. Using various modeling techniques, the authors project 15 different future scenarios for food security through 2050. Each scenario involves an alternative combination of potential population and income growth

and climate change. The authors also examine the specific test case of a hypothetical extended drought in South Asia, to demonstrate the possible effects of increased climate variability on a particular world region. They conclude that the negative effects of climate change on food security can be counteracted by broad-based economic growth particularly improved agricultural productivity and robust international trade in agricultural products to offset regional shortages. In pursuit of these goals, policymakers should increase public investment in land, water, and nutrient use and maintain relatively free international trade. This inquiry into the future of food security should be of use to policymakers and others concerned with the impact of climate change on

international development.

From 1971 until his death in 1984, Foucault gave public lectures at the world-famous College de France. Attended by thousands, these were seminal events in the world of French letters. Picador is proud to be publishing the lectures in thirteen volumes. The lectures comprising *Abnormal* begin by examining the role of psychiatry in modern criminal justice, and its method of categorizing individuals who "resemble their crime before they commit it." Building on the themes of societal self-defense in "Society Must Be Defended," Foucault shows how and why defining "abnormality" and "normality" were prerogatives of power in the

nineteenth century. The College de France lectures add immeasurably to our appreciation of Foucault's work and offer a unique window into his thinking.
