With multiple US states adopting more progressive policies on marijuana for both medicinal and recreational use, the interest in marijuana cultivation has grown faster than the plants can be grown themselves. As a result, many people are starting to grow their own cannabis plants at home for self-consumption. The easiest and most popular way to cultivate marijuana is by growing it indoors. This method is advantageous in that you're not subject to the whim of the seasons, but can assert full control over the growing environment. It's also quite personally rewarding, as marijuana makes for a very interesting and unique houseplant. Even if you're starting from scratch and haven't had any previous experience growing marijuana, the growing process is something that's imminently teachable, and this step-by-step guide is designed to get you off to a great start.

Hemp and cannabis, both belonging to *Cannabis sativa*, have emerged as some of the most valuable crops because of their multiple functionalities - industrial, medicinal, and recreational uses. Like all other crops, they are at risk of diseases and pests. In certain cases, an entire hemp field can fail due to unexpected disease. As a new and highly regulated crop, research on Cannabis crop diseases is scarce, and the science of plant diagnostics is not well covered in the literature. Taking hemp/cannabis as a model crop, the book illustrates how to diagnose a disease problem and how to manage it effectively. It presents real disease cases encountered during crop production, and explains methods of diagnosis, both in the field and in the lab, in order to find out the cause(s).

A volume in the Emerging Issues in Analytical Chemistry series, *The Analytical Chemistry of Cannabis: Quality Assessment, Assurance, and Regulation of Medicinal Marijuana and Cannabinoid Preparations* provides analytical chemistry methods that address the latest issues surrounding cannabis-based products. The plethora of marketed strains of cannabis and cannabinoid-containing products, combined with the lack of industry standards and labelling requirements, adds to the general perception of poor quality control and limited product oversight. The methods described in

this leading-edge volume help to support the manufacturing, labelling, and distribution of safe and consistent products with known chemical content and demonstrated performance characteristics. It treats analytical chemistry within the context of the diverse issues surrounding medicinal and recreational cannabis in a manner designed to foster understanding and rational perspective in non-scientist stakeholders as well as scientists who are concerned with bringing a necessary degree of order to a field now characterized by confusion and contradiction. - Addresses current and emerging analytical chemistry methods - an approach that is unique among the literature on this topic - Presents information from a broad perspective of the issues in a single compact volume - Employs language comprehensible to non-technical stakeholders as well as to specialists in analytical chemistry
