MOHAMMAD BLAZE

Rosie Becomes a Warrior
Independently Published
One of medicine's most
remarkable therapeutic

triumphs was the
discovery of insulin in
1921. The drug produced
astonishing results,
rescuing children and
adults from the deadly
grip of diabetes. But as
Chris Feudtner
demonstrates, the
subsequent
transformation of the

disease from a fatal
condition into a chronic
illness is a story of
success tinged with irony,
a revealing saga that
illuminates the complex
human consequences of
medical intervention.
Bittersweet chronicles this
history of diabetes
through the compelling

perspectives of people who lived with this disease. Drawing on a remarkable body of letters exchanged between patients or their parents and Dr. Elliot P. Joslin and the staff of physicians at his famed Boston clinic, Feudtner examines the experience of living with diabetes across the twentieth century, highlighting changes in treatment and their profound effects on patients' lives. Although focused on juvenile-onset, or Type 1, diabetes, the themes explored in

Bittersweet have implications for our understanding of adult-onset, or Type 2, diabetes, as well as a host of other diseases that, thanks to drugs or medical advances, are being transformed from acute to chronic conditions. Indeed, the tale of diabetes in the post-insulin era provides an ideal opportunity for exploring the larger questions of how medicine changes our lives.

Type 1 Diabetes in Children, Adolescents and

Young Adults B.E.S. Publishing

This is a fun, educational book about what it's like living with Type 1 Diabetes. Jacob tells the story of how he was diagnosed, how he takes care of himself and how he lives life to the fullest every day. Having diabetes doesn't stop him from doing anything he wants to do. This colorful, easy to read book is great for anyone who wants to know more about Type 1 Diabetes.

 "... Perhaps never before has type 1 diabetes been presented to children as endearingly and

accessibly as by Kim Baillieul in the recently-published *Mommy Beeps*." -Maria Muccioli, PhD - writer for www.diabetesdaily.com
 Where does insulin go? In the butter compartment of the fridge, of course. *Mommy Beeps* is a story for children who have a parent, sibling, teacher, or other loved one who has diabetes. Explore the day in the life of a type 1 diabetic and her child as they go on adventures - dealing with high and low sugars, waiting on hold for lab results, and visiting

the endocrinologist. Check out the book "highly recommended" by DiabetesDaily.com - with detailed illustrations of diabetic supplies & machines that beep (whether a meter or pump), *Mommy Beeps* provides opportunities to discuss the varying ways diabetes can be managed and how it impacts those around them. This book is sure to be an essential for any child who is close with anyone who has type 1 diabetes (or type 2!) - but is not diabetic themselves. Author Kim

Baillieul and Illustrator Elisena Bonadio make their debut with Mommy Beeps, a passion project - independently published through their label Bonus Spoon Books, which aims to help people with chronic illnesses educate and advocate the little ones in their lives.

Bright Spots & Landmines Simon and Schuster Currently, available information on pediatric and adolescent diabetes is limited to chapters in larger books covering the broader topic of pediatric endocrinology, and these

do not have the space to delve into specific topics. This concise, timely book contains everything that a practicing provider needs to know in order to provide comprehensive, up-to-date care for children and adolescents with diabetes, from the latest methods for diagnosing various types of diabetes to integrating cutting-edge technology in the care of this patient population. Initial management, the use of insulin pumps, continuous glucose monitoring, and automated insulin

delivery are discussed in detail, as are nutrition therapy, exercise, psychosocial challenges, acute and long-term complications, and future directions for treatment and research. Further, this book provides clinicians with guidelines for the implementation of best practices as outlined by leading associations such as the American Diabetes Association (ADA) and International Society of Pediatric and Adolescent Diabetes (ISPAD). The Yale Children's Diabetes Program has been ranked

among the best in the United States, including clinicians and researchers who are world-renowned for their efforts in improving the care of children with diabetes. This wealth of knowledge and experience positions the author team well as experts in this field.

The Type 1 Diabetes Self-Care Manual: A Complete Guide to Type 1 Diabetes Across the Lifespan for People with Diabetes, Parents, and Caregivers offers practical, evidence-

based and common sense help for people with type 1 diabetes and their caregivers. For the close to 1.5 million people with type 1 diabetes in the United States alone and their family and friends, this book will help them understand the effects of type 1 diabetes, not just when diagnosed, but throughout their lifespan. Dr. Jamie Wood and Dr. Anne Peters, two of the most respected and sought-after endocrinologists, provide an easy-to-follow narrative on all aspects of

the disease. The Type 1 Diabetes Self-Care Manual will be the go-to reference for everyone touched by type 1 diabetes.

The Everything Parent's Guide To Children With Juvenile Diabetes

Houghton Mifflin Harcourt
As a parent of a child diagnosed with diabetes, you are faced with overwhelming, and

sometimes frightening, questions like: Will my child be able to eat sweets again? How will I ever be able to let them go out on their own? What is the newest technology and how can it help my child? Is a cure really on the horizon? The Everything Parent's Guide to Children with Juvenile Diabetes helps you cope with the challenges of helping your children live happy, healthy lives while controlling the disease. This reassuring, easy-to-use guide features advice on: Adjusting to life with

diabetes Helping your children take control of their health Monitoring diet and insulin levels Handling emergencies Finding support for you and your children The Everything Parent's Guide to Children with Juvenile Diabetes helps parents deal with the challenges you and your child face when living with diabetesóone day at a time. Moira McCarthy is a well-known parent in the diabetes community. She is the national chairman of government advocacy of the Juvenile Diabetes

Research Foundation and volunteers as a Bag of Hope delivery mom to newly diagnosed families. She is a member of the Board of Trustees of the Clara Barton Camp for Girls with Diabetes, one of the nation's oldest and best-known diabetes camps. An award-winning news reporter and magazine writer, Ms. McCarthy has appeared on CNN, many other national and local news programs, and twice on the front page of the New York Times. Her daughter Lauren has been a

national spokesperson for diabetes. Ms. McCarthy lives in Plymouth, MA. Jake Kushner, M.D., was a postdoctoral research fellow at the Laboratory of Morris White, the Howard Hughes Medical Institute, the Joslin Diabetes Center, and Harvard Medical School. Dr. Kushner lives in Bala Cynwyd, PA. *Needles* Nova Science Publishers Personalized Predictive Modeling in Diabetes features state-of-the-art methodologies and algorithmic approaches which have been applied to predictive modeling of glucose concentration, ranging from simple autoregressive models of the CGM time series to multivariate nonlinear regression techniques of machine learning. Developments in the field

have been analyzed with respect to: (i) feature set (univariate or multivariate), (ii) regression technique (linear or non-linear), (iii) learning mechanism (batch or sequential), (iv) development and testing procedure and (v) scaling properties. In addition, simulation models of meal-derived glucose absorption and insulin dynamics and kinetics are covered, as an integral part of glucose predictive models. This book will help engineers and clinicians to: select a

regression technique which can capture both linear and non-linear dynamics in glucose metabolism in diabetes, and which exhibits good generalization performance under stationary and non-stationary conditions; ensure the scalability of the optimization algorithm (learning mechanism) with respect to the size of the dataset, provided that multiple days of patient monitoring are needed to obtain a reliable predictive model; select a features set which

efficiently represents both spatial and temporal dependencies between the input variables and the glucose concentration; select simulation models of subcutaneous insulin absorption and meal absorption; identify an appropriate validation procedure, and identify realistic performance measures. Describes fundamentals of modeling techniques as applied to glucose control Covers model selection process and model validation Offers computer code on

[Diabetes in Children and Adolescents](#) American

Diabetes Association Valuable tips, tricks, and advice from a veteran young adult with Type 1 diabetes. Type 1 diabetes

(T1D) can be a daunting diagnosis, especially for a young kid or a teen.

Patrick McAllister knows. Diagnosed with T1D at age twelve, McAllister's life changed forever, and he faced an uncertain future of insulin shots, diet regulations, and high school. If only I had a roadmap, he thought. So, years after he learned things the hard way, he decided to write one.

Whether it is managing mood swings, hormones, or blood sugar levels, [Highs & Lows of Type 1 Diabetes](#) is the ultimate

teenager's and young adult's handbook for surviving, thriving, and flourishing with T1D during one of the most terrifying, yet exciting, phases of your life. Many think of T1D as a scary disease that is sporadic and uncontrollable, but after eight years of dealing with the literal and figurative highs and lows of T1D, McAllister has learned that it is more a lifestyle change. These pages detail a framework for every situation you could possibly imagine involving T1D, from

coming home from the hospital after your diagnosis to preparing to leave your nest for freshman year at college. Learn how to: Count carbohydrates, pump insulin like a pro, and correct irregular blood sugar levels Tell your friends, get good grades, and survive school Play sports with the right game-plan Navigate sex, drugs, and rock 'n' roll And more! Type 1 diabetes stinks, but you don't have to go through it blind and alone! Some have learned it the hard

way, but Highs & Lows of Type 1 Diabetes will ensure that you will take control of your T1D diagnosis, conquer your adolescent years, and live a healthy and fulfilling life.  Type 1 diabetes is a

chronic auto-immune disease. Type 1 diabetes was previously called insulin-dependent diabetes mellitus (IDDM) or juvenile-onset diabetes. Type 1 diabetes develops when the body's immune system destroys pancreatic beta cells, the only cells in the body that make the hormone insulin that regulates blood glucose. To survive, people with type 1 diabetes must have insulin delivered by injection or a pump. Topics discussed in this compilation include

genetic and epigenetic studies of type 1 diabetes; blood pressure and diabetes during pregnancy; comparison of diseases-specific quality of life, metabolic control and cardiorespiratory fitness in physically active and inactive youths with type 1 diabetes; stem cells for the treatment of patients with type 1 diabetes; and the causes and potential complications of type 1 diabetes.

An inspiring account of how one family dealt with the diagnosis of Type 1

Diabetes for both husband and daughter, this book has been described by the President of the Guild of Health Writers as "a little treasure as well as a ray of hope." It was written to encourage other families to rebuild normal lives after diagnosis, to raise awareness of the disease, and to raise funds for research into a cure. All profits will be donated to JDRF, the leading charitable funder of research into better therapy and a cure for Type 1 Diabetes.
