Making the Most of Small Groups International Society for Technology in Education

Author Debbie Diller turns her attention to small reading groups and the teacher's role in small-group instruction. *Making the Most of Small Groups: Differentiation for All* grapples with difficult questions regarding small-group instruction in elementary classrooms such as: How do I find the time? How can I be more organized? How do I form groups? How can I differentiate to meet the

needs of all of my students? Structured around the five essential reading elements - comprehension, fluency, phonemic awareness, phonics, and vocabulary - the book provides practical tips, sample lessons, lesson plans and templates, suggestions for related literacy work stations, and connections to whole-group instruction. In addition to ideas to use immediately in the classroom, Diller provides an overview of relevant research and reflection questions for professional conversations.

The framework for teaching document is an evolving instrument, but the core concepts and architecture (domains, components, and elements) have remained the same. Major concepts of the Common Core State Standards are included. For example, deep conceptual understanding, the importance of student intellectual engagement, and the precise use of language have always been at the foundation of the Framework for Teaching, but are more clearly articulated in this edition. The language has been tightened to increase ease of use and accuracy in assessment. Many of the enhancements to the Framework are located in the possible examples, rather than in the rubric language or critical attributes for each level of performance.

In today's classrooms, the instructional needs and developmental levels of our students are highly varied, and the conventional math whole-group model has its downsides. In contrast to the rigid, one-size-ts-all approach of conventional whole-group instruction, guided math allows us to structure our math block to support student learning in risk-free, small-group instruction. Guided math goes beyond just reorganizing your math block; it also gives you an opportunity to approach math instruction with a renewed sense of perspective and purpose. Drawing on two decades of experience, Reagan Tunstall offers step-by-step best practices to help educators revolutionize their math blocks with a student-centered approach. Whether you're a new teacher who's curious about guided math or a veteran educator looking to hone your methodology, Guided Math AMPED will transform your math block into an exciting and engaging encounter that encourages your students to see themselves as genuine mathematicians. "Most educators have come to realize that the magic happens at the teacher table or during small-group instruction. If that's the case, Guided Math AMPED is the spell book." -JENNIFER SALYARDS, M.Ed., principal, Chamberlin Elementary, Stephenville ISD "Guided Math AMPED provides educators with a practical framework for enhancing math instruction in a way that provides research-based practices, differentiated instruction, and fun, all while strengthening relationships with students and developing math mindsets. No matter your experience or tenure in education, Guided Math AMPED will give you tips and tricks to implement in your classroom." -MATT BERES, district administrator, Wooster, OH "Guided math is one of the best things you can implement in your classroom, and Reagan Tunstall is the best to learn from, thanks to her perfect framework and step-by-step instructions. She has thought through every potential roadblock and offers concise solutions because she's experienced

it all in her own classroom." -HALEE SIKORSKI, educator, A Latte Learning "Don't you dare let another teacher borrow this book . . . you may never get it back! From the first page to the end, this book is filled with practical ideas and guidelines guaranteed to take your guided math block to the next level." -LORI MCDONALD, M.Ed., retired educator

How can today's teachers, whose classrooms are more culturally and linguistically diverse than ever before, ensure that their students achieve at high levels? How can they design units and lessons that support English learners in language development and content learning—simultaneously? Authors Amy Heineke and Jay McTighe provide the answers by adding a lens on language to the widely used Understanding by Design® framework (UbD® framework) for curriculum design, which emphasizes teaching for understanding, not rote memorization. Readers will learn the components of the UbD framework; the fundamentals of language and language development; how to use diversity as a valuable resource for instruction by gathering information about students' background knowledge from home, community, and school; how to design units and lessons that integrate language development with content learning in the form of essential knowledge and skills; and how to assess in ways that enable language learners to reveal their academic knowledge. Student profiles, real-life classroom scenarios, and sample units and lessons provide compelling examples of how teachers in all grade levels and content areas use the UbD framework in their culturally and linguistically diverse classrooms. Combining these practical examples with findings from an extensive research base, the authors deliver a useful and authoritative guide for reaching the overarching goal: ensuring that all students have equitable access to high-quality curriculum and instruction.

Margaret Carr's seminal work on Learning Stories was first published by SAGE in 2001, and this widely acclaimed approach to assessment has since gained a huge international following. In this

new full-colour book, the authors outline the philosophy behind Learning Stories and refer to the latest findings from the research projects they have led with teachers on learning dispositions and learning power, to argue that Learning Stories can construct learner identities in early childhood settings and schools. By making the connection between sociocultural approaches to pedagogy and assessment, and narrative inquiry, this book contextualizes Learning Stories as a philosophical approach to education, learning and pedagogy. Chapters explore how Learning Stories: - help make connections with families - support the inclusion of children and family voices - tell us stories about babies - allow children to dictate their own stories - can be used to revisit children's learning journeys - can contribute to teaching and learning wisdom This ground-breaking book expands on the concept of Learning Stories and includes examples from practice in both New Zealand and the UK. It outlines the philosophy behind this pedagogical tool for documenting how learning identities are constructed and shows, through research evidence, why the early years is such a critical time in the formation of learning dispositions. Margaret Carr is a Professor of Education at the University of Waikato, New Zealand. Wendy Lee is Director of the Educational Leadership Project, New Zealand.
