 This handbook illustrates concepts, methods and tools for "primary environmental care", an approach that seeks to empower communities to meet basic needs while protecting the environment. In particular, it focuses on how population size, structure, growth (or decline) and movements relate to the quality of the environment and the quality of life. Emphasis is placed on a community-led process of participatory action research in which local knowledge and skills are fully utilized. A main purpose is to promote the effective, integrated management of environment and population dynamics for the benefit of local people. As a collection of tools for action, it is designed for professionals in conservation and natural resource management, development, population and public health who wish to promote and assist participatory action research in rural

communities.

 Spanning her entire life, the fully annotated selections in this volume include well known recollections of the great Victorian novelist plus a large assortment not found in her biographies. Altogether they provide a fresh, vivid, and sometimes startling portrait of a controversial genius.

Islands of Salt Hachette Education

'I know no place where firm and paternal government would sooner produce beneficial results than in the Solomons ... Here is an object worthy indeed the devotion of one's life'. Charles Morris Woodford devoted his working life to pursuing this dream, becoming the first British Resident Commissioner in 1897 and remaining in office until 1915, establishing the colonial state almost singlehandedly. His career in the Pacific extended beyond the Solomon Islands. He worked briefly for the Western Pacific High Commission in Fiji, was a temporary consul in Samoa, and travelled as a Government Agent on a small labour vessel returning indentured workers to the Gilbert Islands. As an independent naturalist he made three successful expeditions to the islands, and even climbed Mt Popomanaseu, the highest mountain in Guadalcanal. However, his natural history collection

of over 20,000 specimens, held by the British Museum of Natural History, has not been comprehensively examined. The British Solomon Islands Protectorate was established in order to control the Pacific Labour Trade and to counter possible expansion by French and German colonialists. It remaining an impoverished, largely neglected protectorate in the Western Pacific whose economic importance was large-scale copra production, with its copra considered the second-worst in the world. This book is a study of Woodford, the man, and what drove his desire to establish a colonial protectorate in the Solomon Islands. In doing so, it also addresses ongoing issues: not so much why the independent state broke down, but how imperfectly it was put together in the first place.

The book provides a broad overview of the challenges and recent developments in the field of smart mobility and transportation, including technical, algorithmic and social aspects of smart mobility and transportation. It reviews new ideas for services and platforms for future mobility. New concepts of artificial intelligence and the implementation in new hardware architecture are discussed. In the context of artificial intelligence, new challenges of machine learning for autonomous vehicles and fleets are investigated. The book also investigates human factors and social questions of future mobility concepts. The goal of this book is to provide a holistic approach towards smart transportation. The book reviews new technologies such as the cloud, machine learning and communication for fully atomized transport, catering to the needs of citizens. This will lead to complete change of concepts in transportation.

The Rejection of Consequentialism Cambridge University Press

In contemporary philosophy, substantive moral theories are typically classified as either consequentialist or deontological. Standard consequentialist theories insist, roughly, that agents must always act so as to produce the best available outcomes overall. Standard deontological theories, by contrast, maintain that there are some circumstances where one is permitted but not required to produce the best overall results, and still other circumstances in which one is positively forbidden to do so. Classical utilitarianism is the most familiar consequentialist view, but it is widely regarded as an inadequate account of morality. Although Professor Scheffler agrees with this assessment, he also believes that consequentialism seems initially plausible, and that there is a persistent air of paradox surrounding typical deontological views. In this book, therefore, he undertakes to reconsider the rejection of consequentialism. He argues that it is possible to provide a rationale for the view that agents need not always produce the best possible overall outcomes, and this motivates one departure from consequentialism; but he shows that it is surprisingly difficult to provide a satisfactory rationale for the view that there are times when agents must not produce the best possible overall outcomes. He goes on to argue for a hitherto neglected type of moral conception, according to which agents are always permitted, but not always required, to produce the best outcomes.

Handbook of Islamic Sects and Movements FriesenPress

This second edition of Historical Dictionary of the Berbers contains a chronology, an introduction, appendixes, and an extensive bibliography. The dictionary section has over 200 cross-referenced entries on important personalities, places, events, institutions, and aspects of culture, society, economy, and politics.

George Eliot CRC Press

This book explains with a minimum of jargon how diseases start, what that main symptoms are and how they may affect us. It is intended as a concise guide for those working in alternative

medicine and also for those without a medical background who want a clearer understanding of the ways in which common illnesses develop and the terms used to describe them.

America, Russia, Hemp, and Napoleon Penn State University Press

BETHANY MACDONALD HAS TRAINED SIX LONG YEARS FOR THIS MOMENT. SHE'LL TRY TO SOLVE FIVE QUESTIONS IN THREE HOURS, FOR ONE IMPROBABLE DREAM. THE DREAM OF REPRESENTING HER COUNTRY, AND BECOMING A MATH OLYMPIAN. As a small-town girl in Nova Scotia bullied for liking numbers more than boys, and lacking the encouragement of her unsupportive single mother who frowns at her daughter's unrealistic ambition, Bethany's road to the International Math Olympiad has been marked by numerous challenges. Through persistence, perseverance, and the support of innovative mentors who inspire her with a love of learning, Bethany confronts these challenges and develops the creativity and confidence to reach her potential. In training to become a world-champion "mathlete", Bethany discovers the heart of mathematics - a subject that's not about memorizing formulas, but rather about problem-solving and detecting patterns to uncover truth, as well as learning how to apply the deep and unexpected connections of mathematics to every aspect of her life, including athletics, spirituality, and environmental sustainability. As Bethany reflects on her long journey and envisions her exciting future, she realizes that she has shattered the misguided stereotype that only boys can excel in math, and discovers a sense of purpose that through mathematics, she can and she will make an extraordinary contribution to society.

'This is about gob-smacking science at the far end of reason ... Take it nice and easy and savour the experience of your mind being blown without recourse to hallucinogens' Nicholas Lezard, Guardian For most people, quantum theory is a byword for mysterious, impenetrable science. And yet for many years it was equally baffling for scientists themselves. In this magisterial book, Manjit Kumar gives a dramatic and superbly-written history of this fundamental scientific revolution, and the divisive debate at its core. Quantum theory looks at the very building blocks of our world, the particles and processes without which it could not exist. Yet for 60 years most physicists believed that quantum theory denied the very existence of reality itself. In this tour de force of science history, Manjit Kumar shows how the golden age of physics ignited the greatest intellectual debate of the twentieth century. Quantum theory is weird. In 1905, Albert Einstein suggested that light was a particle, not a wave, defying a century of experiments. Werner Heisenberg's uncertainty principle and Erwin Schrodinger's famous dead-and-alive cat are similarly strange. As Niels Bohr said, if you weren't shocked by quantum theory, you didn't really understand it. While "Quantum" sets the science in the context of the great upheavals of the modern age, Kumar's centrepiece is the conflict between Einstein and Bohr over the nature of reality and the soul of science. 'Bohr brainwashed a whole generation of physicists into believing that the problem had been solved', lamented the Nobel Prize-winning physicist Murray Gell-Mann. But in "Quantum", Kumar brings Einstein back to the centre of the quantum debate. "Quantum" is the essential read for anyone fascinated by this complex and thrilling story and by the band of brilliant men at its heart. Wiley-Blackwell

The Anthropology of Development and Globalization is a collection of readings that provides an unprecedented overview of this field that ranges from the field's classical origins to today's debates about the "magic" of the free market. Explores the foundations of the anthropology of development, a field newly

animated by theories of globalization and transnationalism Framed by an encyclopedic introduction that will prove indispensable to students and experts alike Includes readings ranging from Weber and Marx and Engels to contemporary works on the politics of development knowledge, consumption, environment, gender, international NGO networks, the IMF, campaigns to reform the World Bank, the collapse of socialism, and the limits of "post-developmentalism" Fills a crucial gap in the literature by mingling historical, cultural, political, and economic perspectives on development and globalization Present a wide range of theoretical approaches and topics

Return to Reason Hachette Education

Here is a volume devoted exclusively to the buccaneers and pirates who infested the shores, bays, and islands of the Atlantic Coast of North America. This is no collection of Old Wives' Tales, half-myth, half-truth, handed down from year to year with the story more distorted with each telling, nor is it a work of fiction. This book is an accurate account of the most outstanding pirates who ever visited the shores of the Atlantic Coast. These are stories of stark realism. None of the artificial school of sheltered existence is included. Except for the extreme profanity, blasphemy, and obscenity in which most pirates were adept, everything has been included which is essential for the reader to get a true and fair picture of the life of a sea-rover. Bold, daring adventurers, whose deeds are still discussed from the far reaches of North America to the tropical islands of the West Indies, parade through the pages of this volume. There is hardly a square mile of sandy beach from the Avalon Peninsula in Newfoundland to Key West, Florida, which has not felt the imprint of the buccaneer's boot.

Medical lexicon Hachette Education

The early-modern Venezuelan Caribbean did not lure seafarers with the saccharine delights of cane sugar but with the preserving qualities of solar sea salt. In this book, the historical archaeological study of this salty commodity offers a unique entryway into the hitherto unknown maritime mobilities and daily lives of the seafarers who camped at the saltpans of Venezuelan islands from the seventeenth to the late nineteenth centuries, cultivating and harvesting the white crystal of the sea. For the first time, this study offers a comprehensive documentary history of the saltpans of La Tortuga Island and Cayo Sal in the Los Roques Archipelago, uncovering the surprising importance of their salt. Long-term archaeological excavations at the campsites by these saltpans have brought to light the plethora of material remains left behind by seafarers during their seasonal and temporary salt forays. The exhaustive analysis of the thousands of recovered things - pipes, punch bowls, plates, teapots, buttons, bones - contrasted with documentary evidence, not only enables us to understand where these things came from but also by

whom they were used. By engaging the evidence through my theoretical framework of assemblages of practice, I demonstrate how seafarers and things were vibrantly entangled in the everyday assemblages of practice of salt cultivation, dining and drinking. This multisited approach spanning 256 years, reveals that seafarers were fervent buyers of fashionable products, drinking hot tea from porcelain tea bowls, using colorful ceramic chamber pots for their hygienic needs and imbibing exotic rum punch by the scorching saltpans of the uninhabited Venezuelan islands. Intended for scholars, students and the interested public alike, this historical archaeological study positions humble seafarers in the limelight, not as the anonymous movers of international trade and facilitators of imperial interests, but as avid trans-imperial and extra-imperial consumers of the fruits of those very empires.

Medical Lexicon Springer

The medicinal properties of plants have been of interest to society for centuries and continue to be a subject of modern research. Yet too often research has been predicated upon poorly identified plant material and secondary sources of information. Much of what we know about the use of plants as drugs, poisons, foods, and as instruments of magical or religious practice derives from lore inherited from the clay tablets and papyri of the ancients and from compilations of early Greek, Arabic, and Indian physicians. Meanwhile, information pertaining to plant parts used even now in the daily life of peoples far removed from the influence of modern medical and health practices has been largely overlooked. With the encroachment of civilized cultures on primitive societies, unique traditions—often unwritten—are being destroyed. In many instances, the very plants involved are disappearing. Not infrequently, the only record, where one exists at all, of these vanishing pools of knowledge is that of the botanical field worker. For no matter what chemical or biological investigations may follow, the botanist can affix to an actual specimen, as he collects it in the field, the local terms applied to the plant and a description of native medicinal or other uses. Dr. Altschul has compiled field notes of health and medical interest on over 5,000 species of plants, culled from some 2,500,000 specimens of higher plants collected by field botanists from all over the world and deposited in the combined collections of the Arnold Arboretum and Gray Herbarium of Harvard University. The resulting catalogue represents a unique approach to supplying new investigational leads to researchers seeking biologically active plant principles. Dr. Altschul's meticulous sheet-by-sheet examination of the Harvard collections provides the pharmacognosist, pharmacologist, and others in the medical and health sciences with an extensive firsthand survey of the domestic medicines of many cultures. These previously unpublished botanists' notes are here made available in a comprehensive publication that should become an important resource for every investigation into the area of medicinal phytochemistry. Indexes to families and genera are provided, as well as a medical index referring to diseases and to therapeutic properties for researchers intent on locating plants with special medicinal capacities. The author is a Research Fellow at the Botanical Museum of Harvard University.

Stephen Toulmin argues that the potential for reason to improve our lives has been hampered by a serious imbalance in our pursuit of knowledge. The centuries-old dominance of rationality has diminished the value of reasonableness. Toulmin issues a powerful call to redress the balance between rationality and reasonableness.

Maths, Cycle 4, 3e-4e-5e, Mission Indigo Oxford University Press

This volume surveys the role women have played in various types of business as owners, co-owners and decision-making managers in European and North American societies since the sixteenth century. Drawing on up-to-date scholarship, it identifies the economic, social, legal and cultural factors that have facilitated or restricted women's participation in business. It pays particular attention to the ways in which gender norms, and their evolution, shaped not only those women's experience of business, but the ways they were perceived by contemporaries, documented in sources and, partly as a consequence, viewed by historians.

The Handbook of Islamic Sects and Movements offers a multinational study of Islam, its variants, influences, and neighbouring movements, from a multidisciplinary range of scholars. These chapters highlight the diversity of Islam, especially in its contemporary manifestations, as a religion of many communities, theologies, and ideologies. Over five

sections—on Sunni, Shia, Sufi, fundamentalist, and fringe Islamic movements—the authors provide historical overviews, analyses, and in-depth studies of large and small Islamic and related groups from all around the world. The contents of this volume will be of interest to both newcomers to the study of Islam and established scholars of religion who wish to engage with the dynamic label of Islam and the many impactful movements of the Islamic world.

Historical Dictionary of the Berbers (Imazighen) ANU Press Occult investigator Quincey Morris and his “consultant,” white witch Libby Chastain, are hired to free a family from a deadly curse that appears to date back to the Salem witch trials. Fraught with danger, the trail finds them stalking the mysterious occult underworlds of Boston, San Francisco, New Orleans and New York, searching out the root of the curse. After surviving a series of terrifying attempts on their lives, the two find themselves drawn inexorably towards Salem itself – and the very heart of darkness.
