ROBERSON TYRESE

Information Systems Research Springer Science & Business Media

This report, which focuses on four US states - Ohio, Texas, Virginia and Washington - is the third of a series of country-specific reviews conducted as part of the OECD project on the labour market relevance and outcomes of higher education. The report offers a comprehensive review of graduate outcomes and policies supporting alignment between higher education and the labour market in the four participating states in 2018-19, an overview of the US labour market and higher education context, and a range of policy examples from across OECD jurisdictions to help improve the alignment of higher education and the labour market.

Utility, Usability and Complexity of E-Information Systems John Wiley & Sons

The development of a research, teaching, or application of competitive (economic) intelligence requires a strategic and transverse vision in regards to related issues. It is essential to integrate the role of culture when interpreting results, either from the training of a specialist or in respect to a country or region. The authors of this book, members of an expert group supported by the CNRS in France, bring all of their talents together to create a comprehensive book that does just this and more.

Platform and Collective Intelligence John Wiley & Sons

Covers use of new technologies for libraries and the European Commission plan for libraries. Contains papers covering new technologies and data collecting for preservation, networking between publishers, distributors and libraries, data and access, co-operative library systems and more.

L'imaginaire politique OECD Publishing

Information Systems Research: Relevant Theory and Informed Practice comprises the edited proceedings of the WG8.2 conference, "Relevant Theory and Informed Practice: Looking Forward from a 20-Year Perspective on IS Research," which was sponsored by IFIP and held in Manchester, England, in July 2004. The conference attracted a record number of high-quality manuscripts, all of which were subjected to a rigorous reviewing process in which four to eight track chairs, associate editors, and reviewers thoughtfully scrutinized papers by the highly regarded as well as the newcomers. No person or idea was considered sacrosanct and no paper made it through this process unscathed. All authors were asked to revise the accepted papers, some more than once; thus, good papers got better. With only 29 percent of the papers accepted, these proceedings are significantly more selective than is typical of many conference proceedings. This volume is organized in 7 sections, with 33 full research papers providing panoramic views and reflections on the Information Systems (IS) discipline followed by papers featuring critical interpretive studies, action research, theoretical perspectives on IS research, and the methods and politics of IS development. Also included are 6 panel descriptions and a new category of "bright idea" position papers, 11 in all, wherein main points are summarized in a pithy and provocative fashion.

Human Interaction with Technology for Working, Communicating, and Learning:

Advancements Springer Science & Business Media

Parmi les domaines du politique, l'imaginaire est un champ trop souvent négligé, alors qu'il est un élément essentiel de la construction des identités politiques et de la formation des consciences politiques. Cet ouvrage propose une analyse de l'imaginaire, considéré comme un principe d'explication du monde exprimé en particulier par les mythes et les idéologies. Les différentes significations de l'imaginaire politique s'inscrivent dans des engagements et dans des pratiques de pouvoir dont les spécificités historiques et culturelles contribuent à structurer les espaces publics. Pour tenter de comprendre l'imaginaire et de lui donner du sens, l'imaginaire politique présente des méthodes d'approche fondées sur la sémiotique et sur l'analyse des discours et des images des

acteurs politiques et des médias. Il expose la place qu'occupent dans le débat public et dans les pratiques politiques l'utopie, la peur et les autres formes de l'imaginaire politique.

Research in Information Systems John Wiley & Sons

The report, Health and the Millennium Development Goals, presents data on progress on the health goals and targets and looks beyond the numbers to analyze why improvements in health have been slow and to suggest what must be done to change this. The report points to weak and inequitable health systems as a key obstacle, including particularly a crisis in health personnel and the urgent need for sustainable health financing. Building up and strengthening health systems is vital if more progress is to be made towards the Millennium Development Goals (MDGs), the World Health Organization (WHO) said in a new report. Unless urgent investments are made in health systems, current rates of progress will not be sufficient to meet most of the Goals. Key Recommendations of Health in the Millennium Development Goals: To strengthen health systems and ensure they are equitable, to ensure that health is prioritized within overall development and economic policies, to develop health strategies that respond to the diverse and evolving needs of countries, to mobilize needed resources for health in poor countries, and to improve the quality of health data.

Les systèmes de mise en œuvre de la protection sociale John Wiley & Sons

This enlarged and expanded edition is designed to be a valuable resource for librarians and users of information sources, clarifying the bewildering number of new acronyms that appear every year in the information science field. Nearly 30,000 acronyms in 35 languages are listed. As libraries are to a large extent interdisciplinary, the dictionary covers language forms used in computers, publishing, printing, archive management, journalism and reprography, as well as in the library and information science fields. Acronyms reproduced here represent institutions, library and information systems, pr.

La sécurité des accès mobiles : au-delà du BYOD World Health Organization
 Information is an element of knowledge that can be stored, processed or transmitted. It is linked to concepts of communication, data, knowledge or representation. In a context of steady increase in the mass of information it is difficult to know what information to look for and where to find them. Computer techniques exist to facilitate this research and allow relevant information extraction. Recommendation systems introduced the notions inherent to the recommendation, based, inter alia, information search, filtering, machine learning, collaborative approaches. It also deals with the assessment of such systems and has various applications.

Information and Communication Technologies in Organizations and Society IGI Global

The purpose of this book is to question the relationships involved in decision making and the systems designed to support it: decision support systems (DSS). The focus is on how these systems are engineered; to stop and think about the questions to be asked throughout the engineering process and, in particular, about the impact designers' choices have on these systems. This therefore involves identifying the elements of the problem of decision support systems engineering: the main objects and dimensions to be considered and the relationships they involve, issues at the levels of the decision-maker, of the organization (and even of society), the general approach to which to subscribe and so on.

Enterprise Information Systems V Primento

Organizations, both private and public, are now evolving in a globalized "information society" that has been accelerated by digitization. They find themselves drawn into a spiral of transformations fueled by the incessant reinvention of information and communication technologies (ICT) that are changing digital uses and practices. They transform through the mediating action of ICTs, work activities and associated action situations. Platform and Collective Intelligence analyzes a specific declination of an organization that has become irreversibly reticular: the "platform organization". The network, at the heart of this new conception, proposes a model combining cybernetics and computing. The organization can thus be seen as an interface for contact, via its information systems, for employees or citizens, whatever their geographical location. With a view going beyond

technocentrism and technological determinism, this book combines collective intelligence and sociotechnics with the platform to arrive at the notion of "organizational experience".

Methodology and Tools in Knowledge-Based Systems John Wiley & Sons

L'entreprise se construit sur sa capacité d'innovation et avec des systèmes opérationnels capables de délivrer la valeur ajoutée attendue. Les modèles de systèmes d'information doivent s'adapter rapidement aux technologies émergentes et aux besoins des clients et des utilisateurs. Cet ouvrage dresse un panorama des approches classiques et des méthodes empiriques pour les SI et propose une vision élargie qui correspond aux besoins des métiers. Il présente les différents aspects permettant de faire face aux évolutions et aux ruptures technologiques à l'aide d'une organisation optimale qui va de la gouvernance à la gestion informatique. Il expose les procédés pour introduire les nouvelles technologies de veille et d'intelligence économique tout en décrivant les macroétapes (analyse, conception, production et mise en exploitation) et l'incorporation des pratiques métiers en matière de cycle de vie. L'auteur Alphonse Carlier est ingénieur industriel et consultant en gestion et développement de projets innovants. Il intervient comme formateur sur les technologies objets, MERISE, UML2, ITILV3, ISO 20000, ISO 9001, l'administration des bases de données Oracle, PostgreSQL, MySQL, les outils collaboratifs, les CMS et les méthodes de gestion.

Towards Effective and Sustainable Seed Relief Activities Springer Science & Business Media

Le présent ouvrage est le résultat d'une recherche conjointe entre les Universités de Bologne, Rennes et Bruxelles sur le thème de la dimension extérieure de l'espace de liberté, de sécurité et de justice de l'Union européenne (ELSJ). Cette recherche a été soutenue par la Commission européenne dans le cadre de l'Action Jean Monnet. Il associe des professeurs et chercheurs de renom qui conjuguent leurs compétences et situent leur analyse à l'intersection des politiques en la matière et des politiques externes de l'Union européenne. Les auteurs évaluent de manière critique l'impact du traité de Lisbonne et de la pratique de l'Union concernant la dimension extérieure de l'ELSJ. Cette dimension dont l'importance ne cesse de croître oblige l'Union à concilier des impératifs parfois contradictoires entre les objectifs sécuritaires de l'ELSJ ou ceux de l'action extérieure, ou encore avec les valeurs sur lesquelles elle est fondée. Les auteurs tentent de répondre à différentes questions induites par le nouveau système de représentation extérieure de l'Union dans le domaine de l'ELSJ : Quelles sont les retombées juridiques du nouveau système ? Quel est également son impact politique ? Ne risque-t-on pas une incursion croissante de la politique étrangère et de sécurité commune (PESC) dans les aspects sécuritaires de l'ELSJ ?

Les systèmes d'information élargis (Coll. management et informatique)Lavoisier

Proceedings of the 3rd International Conference of Economics and Management (CIREG 2016)

Volume II World Scientific

J. -E. DUBOIS and N. GERSHON The first volume of this series, "The Information Revolution: Impact on Science and Technology", emphasized the importance of data sharing and fast communication and the advantages of current hypertext developments in creating new and flexible data access. Volume II, "Modeling Complex Data for Creating Information", dealt, in particular, with the specific constraints of science and technology data including imprecision and uncertainty. It also provided representation and handling tools and object oriented programming technology for developing data systems. The papers presented in this third volume are concerned with the very specific information problems of the technical and competitive industrial world. Here, production and selling rely on creative design, information processing, special up-to date data search, knowledge comprehension and fast action, all essential for decision making steps. The following topics are discussed in this volume: • Cognition and Recognition in Design • Knowledge Based Systems (KBS) Evaluation • Modeling Tools for Knowledge Discovery • Standards and CAD (Computer Aided Design) Aspects of Industrial Exchange and Specifications • Information Seeking Strategies of Selective Access to Intelligent Information • Special Information Resources: Complex Databases Most of these topics, inspired by the symposium on "Communication and Computer Aided Systems" held during the 14th International CODATA Conference, deal with systemic components used by various up-to-date industries in development strategies.

Information and Knowledge System Springer Nature

Les entreprises utilisent trop souvent des recettes clés en main pour améliorer leurs systèmes d'information. Or, ces solutions sont peu efficaces et même contre-productives au regard des vrais enjeux. Cet ouvrage présente les nouvelles stratégies, les business models émergents et les méthodes de management imposés par le défi du numérique. Il crée une dynamique collaborative avec les clients et les fournisseurs et permet d'établir un dialogue constructif entre la direction générale, les acteurs des systèmes d'information et les métiers. Une Carte d'orientation est

proposée afin de diagnostiquer la situation entre les processus et les technologies relationnelles de l'organisation. Elle permet l'élaboration d'une Feuille de route indispensable à l'innovation et à la transition vers le numérique. Pour dégager des plans d'action arbitrés et pilotés en commun, il faut pouvoir assurer une véritable « cogouvernance », c'est-à-dire une gouvernance conjointe de l'information, multi-acteurs, multicompetences et multi-domaines qui transforme avec lucidité l'organisation et s'engage avec succès dans l'entreprise numérique. L'auteur Ancien professeur à Supélec, Gérard Balantian a dirigé l'Institut du Management de l'Information (IMI) de l'UTC pendant plus de 20 ans. Il est aussi un pionnier dans le domaine des schémas directeurs. Expert, formateur et consultant, il intervient auprès des organisations dans le domaine du numérique et de la nouvelle gouvernance de l'information.

ICT Critical Infrastructures and Society IAP

This book provides a comprehensive discussion of the issues related to risk, volatility, value and risk management. It includes a selection of the best papers presented at the Fourth International Finance Conference 2007, qualified by Professor James Heckman, the 2000 Nobel Prize Laureate in Economics, as a high level one. The first half of the book examines ways to manage risk and compute value-at-risk for exchange risk associated to debt portfolios and portfolios of equity. It also covers the Basel II framework implementation and securitisation. The effects of volatility and risk on the valuation of financial assets are further studied in detail. The second half of the book is dedicated to the banking industry, banking competition on the credit market, banking risk and distress, market valuation, managerial risk taking, and value in the ICT activity. With its inclusion of new concepts and recent literature, academics and risk managers will want to read this book.

Advances in Information and Communication Springer Science & Business Media

This report contains papers given to a FAO workshop meeting, held in Rome in May 2003, organised to consider how to improve the effectiveness of seed relief schemes to promote sustainable development and food security, to identify gaps in the development of tools, guidance and methodologies, and to make recommendations for further collaborative work. It includes case studies of seed relief activities in several African countries.

La dimension extérieure de l'espace de liberté, de sécurité et de justice de l'Union européenne après le Traité de Lisbonne Lavoisier

Research in Information Systems helps supervisors and their students get the most out of the PhD experience. It can be used as a basis of courses for supervisors and their research students. This book covers: . The supervisor - student relationship . Practical, social and academic issues . Different models for PhD programs, including US, UK, Latin and Scandinavian models Many vignettes of personal experiences and reflections provide context for the material. The book is written by experts - leading international academics in the field of information systems. They all have had wide experience of research supervision over many years in many countries. The only handbook available specifically for Information Systems, and written for both research supervisors and their students Content agreed and approved by an international panel of experts, ensuring worldwide relevance Includes real life anecdotes to educate, entertain, and contextualise

Environmental Scanning and Sustainable Development M.E. Sharpe

The four-volume set LNAI 6881-LNAI 6884 constitutes the refereed proceedings of the 15th International Conference on Knowledge-Based Intelligent Information and Engineering Systems, KES 2011, held in Kaiserslautern, Germany, in September 2011. Part 1: The total of 244 high-quality papers presented were carefully reviewed and selected from numerous submissions. The 61 papers of Part 1 are organized in topical sections on artificial neural networks, connectionists systems and evolutionary computation, machine learning and classical AI, agent, multi-agentsystems, knowledge based and expert systems, intelligent vision, image processing and signal processing, knowledge management, ontologies, and data mining.

New International Dictionary of Acronyms in Library and Information Science and Related Fields Les systèmes d'information élargis (Coll. management et informatique)

This book presents a collection of original research papers focusing on emerging issues regarding the role of information and communication technologies in organizations, inter-organizational systems, and society. It adopts an inter-disciplinary approach, allowing for the integration of contributions from various disciplines such as information systems, organizational studies, marketing, accounting, and social sciences. This book offers valuable insights not only for scholars, but also for practitioners, managers, and policy makers. The book is a compilation of the best research papers - originally double blind, peer-reviewed contributions - presented at the ICTO 2015 conference held in Paris.
