The aim of this book is to give the first large-scale typological

investigation of pluractionality in the languages of the world. Pluractionality is defined as the morphological modification of the verb to express a plurality of situations that can additionally involve a plurality of participants and/or spaces. Based on a 246-language sample, the main characteristics of pluractionality are described and discussed throughout the book. Firstly, a description of the functions that pluractional markers cross-linguistically express is presented and the relationships occurring among them are explained through the semantic map model. Then, the marking strategies that languages display to express such functions are illustrated and some issues concerning the formal identification are briefly discussed as well. The typological generalizations are corroborated showing how pluractional markers work in three specific languages (Akawaio, Beja, Maa). In conclusion, the theoretical conceptualization of pluractionality is discussed referring to the Radical Construction Grammar approach.

Taylor C. Boas argues that new democracies are likely to develop nationally specific approaches to electioneering through success contagion. The theory of success contagion holds that the first elected president to complete a successful term in office establishes a national model of campaign strategy that other candidates will adopt in future.

The first section of [this] book discusses classical themes, such as pawn majorities, the centre and structural weaknesses. Watson then moves on to discuss new concepts, including the willingness of modern players to accept backward pawns in return for dynamic play, the idea of a good 'bad' bishop, knights finding useful roles at the edge of the board, and the exchange of sacrifice ideas that became prevalent with the post-war Soviet world champions. ..." --

What if I told you that you were only one step away from unlocking new levels of maturity and growth in your church? The myth of the silver bullet still exists because we desperately want it to. We all prefer quick fixes and bandage solutions to the long, hard, slow work that produces real change. So the moment we learn about a new ministry or strategy and see its effect in another church, we run to implement it in our own. Unfortunately, this impulse is usually met by opposition, skepticism, and ultimately, rejection. What if the solution isn't a new model or a complicated strategy, but a shift in perspective? What if you could keep your church's current vision, values, and model, and simply make a few micro-shifts...leading to macro-changes? This book explores five micro-shifts that have the potential to produce macro-changes in your church. As you read, you will discover how to integrate these micro-shifts into the life of your church, starting with the way you disciple. You will finish by developing a plan to structure, communicate, and evaluate these changes to ensure that they take root and pave the way for lasting change and kingdom impact.

Leonid Nikolaev, International Master and first instructor of the "Avangard" chess academy, has authored this booklet with 200 positions, either from the "Classics" of the past and also from modern games, all and only about strategic motifs. His endeavor wants to fill up a gap: whilst it is very easy to find so many training books about tactics and combinational motifs, when it comes to strategy - a work purely focused on positional motifs - it

is quite the opposite. Herein solutions are not "White (or Black) to move and win", with mate or material advantage, but rather moves to gain a positional advantage. Intended for titled players (1st Category and Candidate Master) the benefits provided by this approach have been proved on the field throughout the training sessions by the author himself, at the "Avangard" chess academy.
