This volume brings together 23 of the papers presented at a conference held in Esztergom, Hungary, in May 2018 to coincide with the 800th anniversary of the crusade of King Andrew II of Hungary to the Holy Land in 1217-18. The theme, Bridge of Civilizations, was chosen to highlight aspects of the links and

contrasts between Europe and the areas around the eastern Mediterranean that were visited and occupied by western crusaders and settlers in the twelfth and thirteenth centuries, giving special attention to the evidence provided by archaeology and material culture, as well as historical sources. The results of the joint Syrian-Hungarian Archaeological Mission (SHAM) to the Hospitaller castle of Margat (al-Marqab) highlighted in this volume include an up-to-date overview of the structural development of the site

from 1187 to 1285, as well as particular studies of the wall paintings, cooking installations and pottery. SHAM's recent rescue work at Crac des Chevaliers also provides the basis for studies of the water-management system and medieval burials revealed in its courtyard, while other papers examine the masonry marks and surviving evidence of medieval trebuchet damage at both castles. Other papers focus on the medieval castles of Karak (Jordan) and Jubayl (Lebanon), the medieval buildings of Latakia (Syria), the impact of the Crusades on buildings in Cairo, historic bridges in Lebanon, the medieval chapels of Yanouh-Mghayreh and Edde-Jbeil (Lebanon), piscinas in Crusader churches in the East, the images of donors found in medieval Lebanese

churches, and the activity of late thirteenth-century Western metalworkers in Cyprus. Papers focusing more particularly on historical sources include a new edition of a late eleventh- to twelfth century pilgrimage itinerary from Hungary to the Holy Land, a discussion of two minor military orders in Hungary, a reassessment of the conceptualization of Holy War in the run-up to the First Crusade, and the portrayal of Sultan al-Kāmil in a contemporary western account of the Fifth Crusade.

Provides an overview of the subprime mortgage securitization process and the seven key informational frictions that arise. Discusses the ways that market

participants work to minimize these frictions and speculate on how this process broke down. Continues with a complete picture of the subprime borrower and the subprime loan, discussing both predatory borrowing and predatory lending. Presents the key structural features of a typical subprime securitization, documents how rating agencies assign credit ratings to mortgage-backed securities, and outlines how these agencies monitor the performance of mortgage pools over time. The authors draw upon the example of a mortgage pool securitized by New Century Financial during 2006. Illustrations.

Most industries have plunged into data automation, but health care organizations have lagged in moving patients' medical records from paper to computers. In its first edition, this book presented a blueprint for introducing the computer-based patient record (CPR). The revised edition adds new information to the original book. One

section describes recent developments, including the creation of a computer-based patient record institute. An international chapter highlights what is new in this still-emerging technology. An expert committee explores the potential of machine-readable CPRs to improve diagnostic and care decisions, provide a database for policymaking, and much more, addressing these key questions: Who uses patient records? What technology is available and what further research is necessary to meet users' needs? What should government, medical organizations, and others do to make the transition to CPRs? The volume also explores such issues as privacy and confidentiality, costs, the need for training, legal barriers to CPRs, and other key topics.

Moving away from the strong body of critique of pervasive ?bad data? practices by both governments and private actors in the globalized digital economy, this book aims to paint an alternative, more optimistic but still pragmatic picture of the datafied future. The authors examine and propose ?good data? practices, values and principles from an interdisciplinary, international perspective. From ideas of data sovereignty and justice, to manifestos for change and calls for activism, this collection opens a multifaceted conversation on the kinds of futures we want to see, and presents concrete steps on how we can start realizing good data in practice.

In an ideal world, everyone would always have the right information, in the right form, with the right context, right when

they needed it. Unfortunately, we do not live in an ideal world. This book looks at how people in the real world currently manage to store and process the massive amounts of information that overload their senses and their systems, and discusses how tools can help bring these real information interactions closer to the ideal. Personal information management (PIM) is the study and practice of the activities people perform to acquire, organize, maintain, and retrieve information for everyday use. PIM is a growing area of interest as we all strive for better use of our limited personal resources of time, money, and energy, as well as greater workplace efficiency and productivity. Personal information is currently fragmented across electronic documents, email

messages, paper documents, digital photographs, music, videos, instant messages, and so on. Each form of information is organized and used to complete different tasks and to fulfill disparate roles and responsibilities in an individual's life. Existing PIM tools are partly responsible for this fragmentation. They can also be part of the solution that brings information together again. A major contribution of this book is its integrative treatment of PIM-related research. The book grows out of a workshop on PIM sponsored by the National Science Foundation, held in Seattle, Washington, in 2006. Scholars from major universities and researchers from companies such as Microsoft Research, Google, and IBM offer approaches to conceptual problems of

information management. In doing so, they provide a framework for thinking about PIM as an area for future research and innovation.

Understanding and overcoming the

gender gap in computer science  
education. The information technology  
revolution is transforming almost every  
aspect of society, but girls and women  
are largely out of the loop. Although  
women surf the Web in equal numbers  
to men and make a majority of online  
purchases, few are involved in the  
design and creation of new technology.  
It is mostly men whose perspectives and  
priorities inform the development of  
computing innovations and who reap the  
lion's share of the financial rewards. As  
only a small fraction of high school and  
college computer science students are  
female, the field is likely to remain a  
"male clubhouse," absent major  
changes. In *Unlocking the Clubhouse*,  
social scientist Jane Margolis and  
computer scientist and educator Allan

Fisher examine the many influences contributing to the gender gap in computing. The book is based on interviews with more than 100 computer science students of both sexes from Carnegie Mellon University, a major center of computer science research, over a period of four years, as well as classroom observations and conversations with hundreds of college and high school faculty. The interviews capture the dynamic details of the female computing experience, from the family computer kept in a brother's bedroom to women's feelings of alienation in college computing classes. The authors investigate the familial, educational, and institutional origins of the computing gender gap. They also describe educational reforms that have

made a dramatic difference at Carnegie Mellon—where the percentage of women entering the School of Computer Science rose from 7% in 1995 to 42% in 2000—and at high schools around the country.

Today, it has been said, the world is "flat," as online media allow information to move easily from point to point across the earth. International legal differences, however, are increasingly affecting the ease with which data and ideas can be shared across nations. Copyright law, for example, affects the international flow of materials by stipulating who has the right to replicate or to share certain kinds of content. Similarly, perspectives on privacy rights can differ from nation to nation and affect how personal information is shared globally. Moreover, national laws can affect the exchange of ideas by stipulating the language in which information must be presented in different geopolitical regions. Today's

technical communicators need to understand how legal factors can affect communication practices if they wish to work effectively in global contexts. This collection provides an overview of different legal aspects that technical communicators might encounter when creating materials or sharing information in international environments. Through addressing topics ranging from privacy rights and information exchange to the legalities of business practices in virtual worlds and perspectives on authorship and ownership, the contributors to this volume examine a variety of communication-based legal issues that can cause problems or miscommunication in international interactions. Reviewing such topics from different perspectives, the authors

collectively provide ideas that could serve as a foundation for creating best practices on or for engaging in future research in the area of legal issues in international settings.

This book responds to the growing need to secure critical infrastructure by creating a starting place for new researchers in secure telecommunications networks. It is the first book to discuss securing current and next generation telecommunications networks by the security community. The book not only discusses emerging threats and systems vulnerability, but also presents the open questions posed

by network evolution and defense mechanisms. It is designed for professionals and researchers in

telecommunications. The book is also recommended as a secondary text for graduate-level students in computer science and electrical engineering.
