Mental health problems often debut in early childhood and may last throughout adulthood, thereby making early detection and intervention especially important. The overarching aim of the present thesis was to identify patterns of emotional and behavioural problems indicating mental health problems in preschool children. To facilitate the detection of such problems early on, one available screening instrument Strengths and Difficulties Questionnaire (SDQ), was validated. The development and interaction of externalising problems in preschool children were studied over time. Functioning and behaviour and their relations to protective and risk indicators in both environmental and personal characteristics were explored. The long-term goal was to increase knowledge about early identification of emotional and behavioural problems in preschool children in order to facilitate early intervention. In Study I (n=690), the subscales Hyperactivity and Conduct Problems were shown to be valid for children in the age group 1-3 years. A reasonable level of validity was found for the age group 4-5 years when using the original SDQ four-factor solution. The preschool teachers considered most of the SDQ items relevant and possible to rate. Based on the results of Study II (n=815), a score of ?12 on the SDQ Total Problems Scale is recommended as a cut-off for Swedish preschool children. There were significant differences between boys and girls on all subscales except for the Emotional subscale. The Swedish norms for SDQ are to a large extent similar to findings from other European countries. Study III (n=195) showed that preschool children's conduct problems decrease over time. Children exhibiting more initial hyperactivity (at year 1) have less reduction in conduct problems over time, i.e. the more hyperactivity early in life, the more conduct problems at year 3. In Study IV (n=197), children high in engagement and social interaction function well over time, even in the presence of hyperactivity, while children with low engagement and interaction alone or in combination with hyperactivity and conduct problems continue to have problems. Stability was related to the existence

of a larger number of protective or risk indicators respectively. Taken together, this thesis has shown that the SDQ can be used to identify preschool children at risk of developing mental health problems later in life.

The hidden truth about the French way of life: it's all about seduction—its rules, its pleasures, its secrets France is a seductive country, seductive in its elegance, its beauty, its sensual pleasures, and its joie de vivre. But Elaine Sciolino, the longtime Paris bureau chief of The New York Times, has discovered that seduction is much more than a game to the French: it is the key to understanding France. Seduction plays a crucial role in how the French relate to one another—not just in romantic relationships but also in how they conduct business, enjoy food and drink, define style, engage in intellectual debate, elect politicians, and project power around the world. While sexual repartee and conquest remain at the heart of seduction, for the French seduction has become a philosophy of life, even an ideology, that can confuse outsiders. In *La Seduction*, Sciolino gives us an inside view of how seduction works in all areas, analyzing its limits as well as its power. She demystifies the French way of life in an entertaining and personal narrative that carries us from the neighborhood shops of Paris to the halls of government, from the gardens of Versailles to the agricultural heartland. *La Seduction* will charm you and encourage you to lower your defenses about the French. Pull up a chair and let Elaine Sciolino seduce you.

Structural Design for Fire Safety, 2nd edition Andrew H. Buchanan, University of Canterbury, New Zealand Anthony K. Abu, University of Canterbury, New Zealand A practical and informative guide to structural fire engineering This book presents a comprehensive overview of structural fire engineering. An update on the first edition, the book describes new developments in the past ten years, including advanced calculation methods and computer programs. Further additions include: calculation methods for membrane action in floor slabs exposed to fires; a chapter on composite steel-concrete construction; and case studies of structural collapses. The book begins with an introduction to fire safety in buildings, from fire growth and development to the devastating effects of severe fires on large building structures. Methods of calculating fire severity and fire resistance are then described in detail, together with both simple and advanced methods for assessing and designing for structural fire safety in buildings constructed from structural steel, reinforced concrete, or structural timber. Structural Design for Fire Safety, 2nd edition bridges the information gap between fire safety engineers, structural engineers and building officials, and it will be useful for many others including architects, code writers, building designers, and firefighters. Key features: • Updated references to current research, as well as new end-of-chapter questions and worked examples. • Authors experienced in teaching, researching, and applying structural fire engineering in real buildings. • A focus on basic principles rather than specific building code requirements, for an international audience. An essential guide for structural engineers who wish to improve their understanding of buildings exposed to severe fires and an ideal textbook for introductory or advanced courses in structural fire engineering.
