This alphabet book is meant to introduce the Tamil (Tamizh) alphabet to children in the U.S. and other countries who are more comfortable with English. This book is divided into seven sections. In the first section, the alphabet chart of Tamil is provided. In the second section, the vowels of Tamil are introduced. In the third section, the consonants of Tamil are introduced. In the

fourth section, the Grantha consonants, letters borrowed from Sanskrit in Tamil, are introduced. In second through fourth sections, each letter is introduced by means of a picture of a Tamil word containing the letter. A reasonable approximation to pronouncing the letter and the word in English is given. The English translation of the word and the name of the letter is also provided. In the fifth section, the form of different consonants when they are combined with different vowels are shown. In the sixth section, the basic Tamil numbers are introduced. The final section provides a simple overview of some rules for Tamil pronunciation.

This two-volume handbook presents a collection of novel methodologies with applications and illustrative examples in the areas of data-driven computational social sciences.

Throughout this handbook, the focus is kept specifically on business and consumer-oriented applications with interesting sections ranging from clustering and network analysis, meta-analytics, memetic algorithms, machine learning, recommender systems methodologies, parallel pattern mining and data mining to specific applications in market segmentation, travel, fashion or entertainment

analytics. A must-read for anyone in data-analytics, marketing, behavior modelling and computational social science, interested in the latest applications of new computer science methodologies. The chapters are contributed by leading experts in the associated fields. The chapters cover technical aspects at different levels, some of which are introductory and could be used for teaching. Some chapters aim at building a common understanding of the methodologies and recent application areas including the introduction of new theoretical results in the complexity of core problems. Business and marketing professionals may use the book to familiarize

themselves with some important foundations of data science. The work is a good starting point to establish an open dialogue of communication between professionals and researchers from different fields. Together, the two volumes present a number of different new directions in Business and Customer Analytics with an emphasis in personalization of services, the development of new mathematical models and new algorithms, heuristics and metaheuristics applied to the challenging problems in the field. Sections of the book have introductory material to more specific and advanced themes in some of the chapters, allowing the

volumes to be used as an advanced textbook. Clustering, Proximity Graphs, Pattern Mining, Frequent Itemset Mining, Feature Engineering, Network and Community Detection, Network-based Recommending Systems and Visualization, are some of the topics in the first volume. Techniques on Memetic Algorithms and their applications to Business Analytics and Data Science are surveyed in the second volume; applications in Team Orienteering, Competitive Facility-location, and Visualization of Products and Consumers are also discussed. The second volume also includes an introduction to Meta-Analytics, and to the application areas of Fashion and Travel

Analytics. Overall, the two-volume set helps to describe some fundamentals, acts as a bridge between different disciplines, and presents important results in a rapidly moving field combining powerful optimization techniques allied to new mathematical models critical for personalization of services. Academics and professionals working in the area of business analytics, data science, operations research and marketing will find this handbook valuable as a reference. Students studying these fields will find this handbook useful and helpful as a secondary textbook.

For many people, Urdu is indelibly associated with a bygone era: the cultural renaissance of the eighteenth and nineteenth centuries in the face of colonial oppression, heady mushairas and romantic poetry. For others, it brings to mind the gritty prose of the Progressive Writers portraying the grim social realities of the mid-twentieth century. In this luminous collection of Urdu poetry and prose, Ralph Russell expands our world of Urdu letters to include folk and oral narratives, besides prose and poetry. By situating each form historically, he gives us a refreshing perspective on the diverse literary

cultures and histories of India. Besides canonical short stories by the likes of Manto and Premchand, there is Ismat Chughtai's a little-known autobiographical essay about her relationship with her brother, the writer Azim Beg Chughtai. There are creation tales from the Quran, popular stories of Akbar and Birbal, along with the legendary exploits of Sikandar (Alexander the Great). Selections from the sublime poetry of Mir, Ghalib and others are supplemented by astute commentary and roman transcriptions of the original Urdu. Farhatullah Beg's brilliantly imagined account of the 'last Delhi mushaira' captures a moment in

time never seen again, with the horrors of 1857 just around the corner. An accessible introduction for unfamiliar readers, and a pleasurable companion for those familiar with Urdu literature, this volume is a treasure trove of stories, poetry and history. Originally published as *Hidden in the Lute* (1995), this revised edition has been edited by Russell's student and friend for several years, the novelist Marion Molteno.
