Tout pour réussir les épreuves de géographie dans un ouvrage 3 en 1 ! Ce manuel, parfaitement en phase avec les épreuves des concours, comprend : - 48 commentaires complets de cartes topographiques ; - une géographie régionale de la France (243 extraits de cartes et plus de 1 350 toponymes utilisés) ; - une géographie générale, à jour des derniers concepts géographiques et scientifiques ; - des cours à travers neuf grands thèmes (les littoraux, les montagnes, les territoires agricoles, les territoires du vide, la forêt, les territoires urbains et périurbains, les territoires de la vigne, l'industrie, l'Outre-mer) ; - des questions types et encarts pour se préparer efficacement aux épreuves écrites et orales ; - un lexique complet de plus de 700 définitions et notions indispensables. Préface de Daniel Oster, Président de l'association "Les cafés géographiques". + Offert en ligne - Pour chaque chapitre, une fiche "le + concours" permettant de réfléchir aux notions abordées à travers un autre angle ou média (vidéo, reportage, étude d'une photographie, quizz interactif...). - NOUVEAU + 20 cartes topographiques interactives et une méthode d'analyse de carte en vidéo

Geology and Landscapes of the Eastern Pyrenees BoD - Books on Demand

This proceedings book presents the first-ever cross-disciplinary analysis of 16th-20th century South, East, and Southeast Asian cartography. The central theme of the conference was the mutual influence of Western and Asian cartographic traditions, and the focus was on points of contact between Western and Asian cartographic history. Geographically, the topics were limited to South Asia, East Asia and Southeast Asia, with special attention to India, China, Japan, Korea and Indonesia. Topics addressed included Asia's place in the world, the Dutch East India Company, toponymy, Philipp Franz von Siebold, maritime cartography, missionary mapping and cadastral mapping.

This book aims to develop and test a new methodology for Prehistory to enhance architectural analysis. Test results highlight the architectural biography of Neolithic tumuli in western France and the technology used in their construction, and demonstrate that architectural modifications occurred throughout the Neolithic period.

Images économiques du monde 2015 Springer

This title, first published in 1984, is a case study of crime and criminal justice in rural, southwestern France in the last century of the Old Regime. Based on extensive research in criminal court records, often the only documentary evidence of the poor and illiterate, the study is a valuable addition both to our knowledge of Old Regime society and to our understanding of its judicial institutions. Rural, Old Regime France seethed with violence. Assault, homicide, and a violence of speech occurred frequently at all levels of society. The author's finding that royal fiscal and judicial officials were recurring targets of this violence additionally contributes to our understanding of the revolutionary events ending the Old Regime. This system, providing in principle for judicial torture and corporal and capital punishments for relatively minor crimes, has long epitomized much that was wrong with pre-revolutionary France. But the law in principle is not the law in practice, and the author finds that both local and appeals courts seldom decreed such measures. This book will be of interest to students of history and criminology.

Mons 1865-2015. Ouvrir les murs Editions Publibook

Negli ultimi tre anni l'Europa e il Nord America sono state colpite da un'ondata senza precedenti di attacchi terroristici, eseguiti da individui ispirati dall'ideologia jihadista. Chi sono gli autori di questi attentati? Sono nati e cresciuti in Occidente o sono rifugiati e migranti? Come si sono radicalizzati? Erano ben istruiti e integrati o, al contrario, vivevano ai margini della società? Hanno agito da soli? Quali erano le loro connessioni con lo Stato Islamico? Rispondere a questi e altri interrogativi è utile per comprendere la natura e la portata della minaccia e per riuscire a individuare soluzioni politiche adeguate, basate sull'evidenza empirica. Lo studio - il primo di questo tipo - mira ad analizzare il profilo demografico, le traiettorie di radicalizzazione e i legami con lo Stato Islamico degli individui che hanno compiuto attacchi di matrice jihadista in Europa e Nord America dalla proclamazione del sedicente Califfato nel giugno del 2014.

New Caledonia Ledizioni

This memoir summarizes the current knowledge of New Caledonia's geology, geodynamic evolution, and mineral resources, based on published and unpublished information. It comprises 10 research papers, each addressing a particular geological assemblage or topic. After an introductory chapter, and a review of the published geodynamic models of evolution of the SW Pacific, chapters 3 to 5 focus on the main geological assemblages of Grande Terre: the Pre-Late Cretaceous basement terranes, the Late Cretaceous to Eocene cover, and the Eocene subduction-obduction complex, one of the largest and best-preserved in the world. Chapter 6 is devoted to the Loyalty Islands and Ridge. Chapter 7 deals with the mostly terrestrial post-obduction units including regolith. Chapter 8 deals with palaeobiogeography and discusses plausible scenarios of biotic evolution. Chapters 9 and 10 provide a comprehensive review of New Caledonia's mineral resources. The volume will interest stratigraphers, sedimentologists, marine geologists, palaeontologists, palaeogeographers, igneous and metamorphic petrologists, geochemists, geochronologists, and specialists in tectonics, geodynamic evolution, regolith, ophiolites, and economic geology.

Bibliographie de la France Ledizioni

This introductory book to the six volume series includes an introduction defining the critical zone for mankind that extends from tree canopy and the lower atmosphere to water table and unweathered rock. Soils play a crucial role through the functions and the services that they provide to mankind. The spatial and temporal variability of soils is represented by information systems whose importance, recent evolutions and increasingly performing applications in France and in the world must be underlined. The soil functions, discussed in this book, focus on the regulation of the water cycle, biophysicochemical cycles and the habitat role of biodiversity. The main services presented are those related to the provision of agricultural, fodder and forest products, energy, as well as materials and the role of soil as infrastructure support. They also include the different cultural dimensions of soils, their representations being often linked to myths and rites, as well as their values of environmental and archaeological records. Finally, the issue is raised of an off-ground world.

Landscapes and Landforms of Switzerland Elsevier

This book deals with the geological record and the evolution of ideas concerning the Variscan orogenic belt in France and neighboring regions. Volume 1 is based on a general introduction concerning the imprint of the Variscan period on the geology of France, as well as on the particularities of the study of this ancient orogen. A history of the concepts applied to the Variscan

belt is proposed in order to consider this orogen in the history of Earth Sciences. A paleogeodynamic analysis of the Variscan cycle sets the general framework for the evolution of the orogen, which is then tackled through the prism of the magmatic, metamorphic and tectonic record of the early phases (from Cambrian to Lower Carboniferous). Volume 2 proposes an analysis of the late evolution of the Variscan orogenic belt, reflecting its dismantling in a high-temperature context during the Upper Carboniferous and Permian. The sedimentary archives are described, as well as the questions raised by the specificities of this ancient orogen.

Fluvial Megafans on Earth and Mars John Wiley & Sons

The articulation between persistence and change is relevant to a great number of different disciplines. It is particularly central to the study of urban and rural forms in many different fields of research, in geography, archaeology, architecture and history. Resilience puts forward the idea that we can no longer be truly satisfied with the common approaches used to study the dynamics of landscapes, such as the palimpsest approach, the regressive method and the semiological analysis amongst others, because they are based on the separation between the past and the present, which itself stems from the differentiation between nature and society. This book combines spatio-temporalities, as described in archeogeography, with concepts that have been developed in the field of ecological resilience, such as panarchy and the adaptive cycle. Thus revived, the morphological analysis in this work considers landscapes as complex resilient adaptive systems. The permanence observed in landscapes is no longer presented as the endurance of inherited forms, but as the result of a dynamic that is fed by this constant dialogue between persistence and change. Thus, resilience is here decisively on the side of dynamics rather than that of resistance.

Les territoires ruraux en France - 2e édition Vuibert

This book provides a comprehensive overview of the Landscapes and Landforms of Switzerland. It covers the country's geological and tectonic context, together with its climatic context, geomorphological history, structural and karstic landscapes, glacial and periglacial landscapes, landscapes with natural hazards, geomorphology and society, and the preservation of its geomorphological heritage. Richly illustrated, it presents case studies on some of the country's most famous natural sites, including the Matterhorn, Aletsch Glacier, Sardona Tectonic Arena, and Engadine, amongst others.

Atlas de l'Univers Librinova

Les textes réunis dans ce numéro d'"Études caribéennes" par Dominique Augier et par Patrick Watson proposent une réflexion sur le patrimoine marin de la Caraïbe. Après un premier état des lieux de la recherche et une présentation générale des ressources marines à l'échelle de la Caraïbe, des études spécifiques examinent les enjeux liés aux usages et types de consommation, à leurs modalités de protection et systèmes de gouvernance. Les expériences qui y sont proposées insistent sur l'importance environnementale, sociale mais aussi économique pour bon nombre de pays et de communautés côtières. Enfin l'accent mis sur les actions en cours dans l'espace caribéen, au regard des politiques internationales, livre des enseignements originaux et essentiels dans ce domaine. Fruit du travail rigoureux et passionné de chercheurs et de spécialistes aussi différents qu'éminents, ce livre regroupe différents articles tous fascinants, dans un souci d'ouverture aux populations concernées. Les analyses et les résultats très spécifiques de recherches liées au milieu marin de la Caraïbe dont il s'agit ici intéresseront les professionnels du secteur, mais également les autochtones soucieux de préserver leur environnement. Un livre complet et pensé dans un esprit de communion entre l'homme et la nature.

Bibliographie nationale française Seuil

L'objectif de cet ouvrage est de décrypter les mutations passées et actuelles de l'espace rural pour montrer qu'il n'est plus un espace en creux défini comme l'inverse de la ville. L'ouvrage explique, tout en détaillant le vocabulaire et les méthodes de la géographie, la pluralité et la complexité des territoires ruraux, en abordant : Les mutations des territoires, en termes de structure, de dynamique de peuplement, de production ; La gestion des milieux et les rapports Homme-nature, y compris en espaces littoraux ou montagnards ; Une approche régionale des territoires, incluant l'ensemble de la métropole et de l'outre-mer. Parce que cette thématique est au programme Capes/Agreg 2019-2020, l'ouvrage intéressera tout particulièrement les étudiants en Géographie, mais également les candidats aux concours (agro/veto) ou les professionnels du territoire qui cherchent à actualiser leur connaissances.

This book provides a synthesis of the physiography and geodynamics of the entire Pyrenean orogen and its foreland basins, providing the "big picture" (structure of the orogen and chronology of its formation, overview of its post-orogenic evolution, and Quaternary and recent landscape history). One part of the book proposes a 6-7 day itinerary across the eastern and east-central Pyrenees, two areas that currently provide the richest, best-documented, and most carefully curated database on the post-orogenic evolution of the mountain belt. The book deals with three complementary topics: (i) geodynamics, i.e. the long-term post-orogenic evolution of the Pyrenees since the declining stages of tectonic collision ca. 30 million years ago, and within the wider reference frame of Iberia, the Western Mediterranean, and the Atlantic margin; (ii) geomorphological processes and landforms that have conspired to shape the eastern part of the French and Spanish Pyrenees in response to base-level and climate-related changes over than same time period; (iii) geoheritage, i.e. educational vignettes of the flagship landscape units and typical geological sections of the study area. Written as a field guide, it is designed to help readers to construct discovery-based itineraries through the region (with options and variants depending on time and physical ability), allowing them to appreciate the key landscape and geoheritage features over the course of 1 week, with potential for much more. This GeoGuide is primarily aimed at confirmed geoscientists from most disciplines in Earth science, at postgraduate students engaged in field studies, and at curiosity-driven, educated amateurs keen to enhance their understanding of spectacular or enigmatic features encountered on their travels.

International Catalogue of Scientific Literature [1901-14]. Springer Nature

European Glacial Landscapes: Maximum Extent of Glaciations brings together relevant experts on the history of glaciers and

their impact on the landscape of the main regions of Europe. In some regions the largest recorded glaciations occurred before the Last Glacial Cycle, in one of the major glacial cycles of the Middle Pleistocene. However, the best-preserved evidence of glaciation in the landscape is from the Last Glacial Cycle (Late Pleistocene). The book also analyses these older glacial landforms that can sometimes still be seen in the landscape today. This analysis provides a better understanding of the succession of Pleistocene glaciations and the intervening interglacial periods, examining their possible continental synchrony or asynchrony of past glacier behaviour. The result of this analysis gives important new insights and information on the origin and effects of climatic and geomorphological variability across Europe. European Glacial Landscapes: Maximum Extent of Glaciations examines the landscapes produced by glaciers throughout Europe, the geomorphological effects of glaciations, as well as the chronology and evolution of the past glaciers, with the aim of understanding the interrelationship between glacial expansion and climate changes on this continent. This book is a valuable tool for geographers, geologist, environmental scientists, researchers in physics and earth sciences. - Provides a synthesis that highlights the main similarities or differences, through both space and time, during the maximum recorded expansions of Pleistocene glaciers in Europe - Features research from experts in glacial geomorphology, palaeo-glaciology, palaeo-climatology and palaeo-oceanography on glacial expansion in Europe - Includes detailed color figures and maps, providing a comprehensive comparison of the glacial landscapes of European Pleistocene glaciers

General Catalogue of Printed Books Editions Ellipses

Pour saisir l'évolution politique de la France, les résultats locaux des élections sont essentiels. Leur extrême variabilité géographique semble un défi à leur compréhension. Grâce à des cartes précises qui resituent l'électeur dans son proche milieu plutôt que seulement dans une classe sociale, cet ouvrage ambitieux montre que les variations locales de l'opinion obéissent souvent à une logique historique de longue durée qui se déroule généralement en trois stades : apparition d'une nouvelle opinion à cause d'un évènement singulier, propagation sur un terrain préexistant, limitation par les territoires des opinions rivales. Au fil des pages, Bonnets rouges, Gilets jaunes, partisans de Chasse, pêche, nature et traditions (CPNT), mais aussi du Rassemblement national, du Parti communiste, de la droite et de la gauche se mettent en place dans l'espace français. Alors s'éclaire l'épuisement actuel de l'opposition de la droite et de la gauche, comme les tentatives de remplacer cette opposition, qui puisent dans un passé plus ancien, structuré par des régularités géographiques. Ce qui est souvent présenté comme une histoire progressive est ainsi doublé par une histoire à l'envers, par la réapparition de clivages passés souvent très anciens Hervé Le Bras est historien et démographe, directeur d'études à l'EHESS. Il a notamment publié Marianne et les lapins : l'obsession démographique (Hachette, 1992) et Naissance de la mortalité (Gallimard/Seuil, 2000). Avec Emmanuel Todd, il est l'auteur du best-seller Le Mystère français (Seuil, 2013). En 2016, il a également publié Le Nouvel Ordre électoral aux Éditions du Seuil.

Dictionnaire des communes de la France Armand Colin

Over the last three years Europe and North America have been hit by an unprecedented wave of terrorist attacks perpetrated by individuals motivated by jihadist ideology. Who are the individuals who have carried out these attacks? Were they born and raised in the West? Or were they an "imported threat", refugees and migrants? How did they radicalize? Were they well educated and integrated, or social outcasts? Did they act alone? What were their connections to the Islamic State? The answers to these and other questions have large implications for our understanding of the threat facing us and, consequently, help us design sounder policy solutions built on empirical evidence. This study, the first of its kind, seeks to analyze the demographic profile, radicalization trajectories and connections to the Islamic State of all the individuals who have carried out attacks inspired by jihadist ideology in North America and Europe in the three years since the proclamation of the caliphate in June 2014.
