 SHORTLISTED FOR THE 2021 TWS WILDLIFE PUBLICATION AWARDS. The definitive work on Europe's largest and most spectacular owl. The Eagle Owl is one of the largest owls in the world, and is considered the most eclectic in terms of habitat, nest site and diet. An undisputed top predator, it can prey on a range of mammals up to the size of a fox, and almost every species of bird, reptile, amphibian and fish, as well as a wide spectrum of invertebrates. Surprisingly, this owl can breed almost anywhere, the female laying her eggs on a variety of natural and artificial structures over an array of altitudes. Despite being so adaptable, however, it is still a vulnerable species, and has suffered widely from persecution as well as other threats including electrocution on power lines, decreasing prey availability, the effects of pesticides and pollutants, and habitat alteration. Vincenzo Penteriani and María del Mar Delgado have studied this fascinating bird extensively across its vast Eurasian range. In this book, they detail its intriguing ecology, covering distribution, foraging and breeding behaviour, interspecific interactions, dispersal and conservation issues. The final two chapters provide a remarkable insight into vocal and visual communication. Scientists have long believed that owls and other crepuscular and nocturnal birds forgo the visual signals found in other avian species, but recent research on the Eagle Owl has suggested otherwise. Bringing together more than 30 years of research, The Eagle Owl tells a story rich in detail of one of the most thrilling and magnificent birds in the world.

 Geology - Basics for Engineers (second edition) presents the physical and chemical characteristics of the Earth, the nature and the properties of rocks and unconsolidated deposits/sediments, the action of water, how the Earth is transformed by various phenomena at different scales of time and space. The book shows the engineer how to take geological conditions into account in their projects, and how to exploit a wide range of natural resources in an intelligent way, reduce geological hazards, and manage subsurface pollution. This second edition has been fully revised and updated. Through a problem-based learning approach, this instructional text imparts knowledge and practical experience to engineering students (undergraduate and graduate level), as well as to experts in the fields of civil engineering, environmental engineering, earth sciences, architecture, land and urban planning. Free digital supplements to the book, found on the book page, contain solutions to the problems and animations that show additional facets of the living Earth. The original French edition of the book (2007) won the prestigious Roberval Prize, an international contest organized by the University of Technology of Compiègne in collaboration with the General Council of Oise, France. Geology, Basics for Engineers was selected out of a total of 110 candidates. The jury praised the book as a "very well conceived teaching textbook" and underscored its highly didactic nature, as well as the excellent quality of its illustrations. Features: Offers an exhaustive outline of the methods and techniques used in geology, with a study of the nature and properties of the principal soils and rocks Helps students understand how geological conditions should be taken into account by the engineer by taking a problem-solving approach Contains extensive figures and examples, solutions to problems, and illustrative animations Presents a highly didactic and synthetic work intended for engineering students as well as experts in civil engineering, environmental engineering, the earth sciences, and architecture

 This evaluation of the work of a colonial administration uses an analysis of the policies employed in the fields of education, administration, justice and agriculture. It shows how a largely archaic and isolated country transformed itself and its relationship with the western world.

 Sir James Stirling was arguably the greatest British architect of the twentieth century. This book provides the most comprehensive critical survey of Stirling's work to date, charting the development of his ideas from his formative years, through his partnership with James Gowan, on to his period in practice as sole partner; and finally, his partnership with Michael Wilford. Using archival material, extensive interviews with his partners and others who worked for him, together with analytical examination of key buildings, this detailed critical examination explains his philosophy, working method and design strategy. In doing so, it sheds new light on the atelier structure of his office and who did what on his major buildings. Geoffrey Baker is the first to analyse in depth the articulation systems used in major projects undertaken by Stirling. He confirms that the Staatsgalerie complex at Stuttgart does not demonstrate Stirling's interest in post modernism but rather an enhanced sensitivity towards context informed by his growing allegiance to the classical canon. Baker explains how this important development in his work, powerfully influenced by Karl Friedrich Schinkel, is consummated in perhaps the finest of Stirling's uncompleted works, the extension to London's National Gallery. In a discussion of his mature works, Baker explains how Stirling's work can be understood in terms of several interconnected ideas. These include surrealism, historicism, myth and metaphor, inconsistency and ambiguity, bi-lateral symmetry, the garden, rusticity and arcadia, and the archetype, seen as the repository of the collective architectural memory. As well as discussing his interests and those who influenced Stirling, the book compares his oeuvre with that of the pioneers of modern architecture, Mies van der Rohe, Frank Lloyd Wright, Alvar Aalto and Le Corbusier. This book charts a remarkable career, and offers invaluable insights not only into the masterly, timeless architecture, but also into the man himself: charismatic, irreverent, courageous, serious; sometimes rude, often stubborn, belligerent, yet gentle. He was endlessly inventive and deeply dedicated to his art, producing buildings that reflect all of the above, buildings that are magnificent and ultimately humane.

This book considers the architect Le Corbusier's encounters with Australia and New Zealand as a two-way exchange, showing the impact of his ideas and projects on architects of the region whilst also revealing counterinfluences on Le Corbusier in his post-war career that were activated by his contacts. Compiled from detailed archival research undertaken at the Fondation Le Corbusier, Paris, and nationally based archives, *Le Corbusier in the Antipodes* brings together a set of episodes placing them in context with the history of modern art, architecture and urbanism

in 20th century Australia and New Zealand. Key exchanges between Le Corbusier and others never before described are presented and analyzed, including Le Corbusier's contact with Australian architect Harry Seidler at Chandigarh, Le Corbusier's drawing of the plan of Adelaide in 1950 and his creative collaboration with Jorn Utzon on art for the Sydney Opera House. This book also includes analysis of previously unseen Le Corbusier artworks, which formed part of the Utzon family collection. In reading these personal and contingent moments of encounter, the book puts forward new ways of understanding the dissemination and mediation of Le Corbusier's ideas and their effects in post-war Australia and New Zealand. These antipodean contacts are set against the broader story of Le Corbusier's career, questioning received interpretations of his design methods and current assumptions about the influence of his work in national contexts beyond Europe.
