A History of Magic and Experimental Science

Deals with the history of eyeglasses from their invention in Italy ca. 1286 to the appearance of the telescope three cent. later. "By the end of the 16th cent. eyeglasses were as common in western and central Europe as desktop computers are in western developed countries today." Eyeglasses served an important technological function at both the intellectual and practical level, not only easing the textual studies of scholars but also easing the work of craftsmen/small bus. During the 15th cent. two

crucial developments occurred: the ability to grind convex lenses for various levels of presbyopia and the ability to grind concave lenses for the correction of myopia. As a result, eyeglasses could be made almost to prescription by the early 17th cent. Illus. **A Certain Lucas** New York : Knopf
 The present volume owes its ongm to a Colloquium on "Alchemy and Chemistry in the Sixteenth and Seventeenth Centuries", held at the Warburg Institute on 26th and 27th July 1989. The Colloquium focused on a number of selected themes during a closely defined chronological interval: on the relation of alchemy and chemistry to medicine, philosophy, religion, and to the corpuscular philosophy, in

the sixteenth and seventeenth centuries. The relations between Medicina and alchemy in the Lullian treatises were examined in the opening paper by Michela Pereira, based on researches on unpublished manuscript sources in the period between the 14th and 17th centuries. It is several decades since the researches of R.F. Multhauf gave a prominent role to Johannes de Rupescissa in linking medicine and alchemy through the concept of a quinta essentia. Michela Pereira explores the significance of the Lullian tradition in this development and draws attention to the fact that the early Paracelsians had themselves recognized a family resemblance between the works of Paracelsus and Roger

Bacon's scientia experimentalis and, indeed, a continuity with the Lullian tradition.

Un mot peut en cacher un autre... mais pas toujours celui auquel on s'attend.

Albatros ne vient pas du latin albus, " blanc ", mais de l'amérindien " alcatraz ". Miniature ne tire pas son origine du latin minus, " petit ", mais de minium, " vermillon ", couleur du pigment utilisé dans les premières enluminures au Moyen Age. Au gré des dérives linguistiques et lexicales, les mots évoluent : Jean Maillet en démasque les racines insoupçonnées. A la fois savant et divertissant, cet heureux inventaire de mots choisis pour leur étymologie singulière, intrigante ou controversée est un ouvrage de référence pour tous les esprits curieux.

The papers in this volume derive from the conference on textile

terminology held in June 2014 at the University of Copenhagen. Around 50 experts from the fields of Ancient History, Indo-European Studies, Semitic Philology, Assyriology, Classical Archaeology, and Terminology from twelve different countries came together at the Centre for Textile Research, to discuss textile terminology, semantic fields of clothing and technology, loan words, and developments of textile terms in Antiquity. They exchanged ideas, research results, and presented various views and methods. This volume contains 35 chapters, divided into five sections:

- Textile terminologies across the ancient Near East and the Southern Levant
- Textile terminologies in Europe and Egypt
- Textile terminologies in metaphorical language and poetry
- Textile terminologies: examples from China and Japan
- Technical terms of textiles and textile tools and methodologies of classifications

The Philosophy of Spinoza

Red Wheel/Weiser

From the Western esotericism pioneer, a "work of lucid scholarship [that reveals] the full range of Hermes' innumerable manifestations in European history" (Parabola). Hermes—the fascinating, mercurial messenger of the gods, eloquent revealer of hidden wisdom, and guardian of occult knowledge—has played a central role in the development of esotericism in the West. Drawing upon many rare books and manuscripts, this highly illustrated work explores the question of where Hermes Trismegistus came from, how he came to be a patron of the esoteric traditions, and how the figure of Hermes has remained lively and inspiring to our own day. "Great erudition blended with a highly refined metaphysical sensibility brings the great Hermes to life and allows this powerful psychospiritual

archetype to speak once again [and perhaps even play a few much-needed tricks on us]." —Jacob Needleman, author of *The Heart of Philosophy* "Faivre's remarkable achievement in this single volume is to combine the historical richness of the Hermetic tradition with its relevance to understanding the circumambulations of the psyche today as it pursues its spiritual quest." —June Singer, author of *Boundaries of the Soul* "This book is an impressive and compelling contribution to the puzzling question of both the source and perdurance of Hermes in his variety of shape-shifting guises. From Alexandria to Amsterdam, Athens to America, this thrice-great Hermes keeps showing up, perhaps even more than in antiquity!" —David L. Miller, author of *The New Polytheism*

The starting point generally acknowledged for the revival of Greek studies in the West is 1397, when the Byzantine Manuel Chrysoloras began to teach Greek in Florence. With his *Erotemata*, Chrysoloras gave Westerners a tool to learn Greek; the search for the ideal Greek textbook, however, continued even after the publication of the best Byzantine-humanist grammars. The four Greek Donati edited in this book - 'Latinated' Greek grammars, based on the Latin schoolbook entitled

lanua or Donatus - belong to the many pedagogical experiments documented in manuscripts. They attest to a tradition of Greek studies that probably originated in Venice and/or Crete: a tradition certainly inferior to the Florentine scholarship in quality and circulation, but still important in the cultural history of the Renaissance.

American Philosophical Society
Research on the semantics of spatial markers in French is known mainly through Vandeloise's (1986, 1991) work on static prepositions. However, interest in the expression of space in French goes back to the mid-1970s and focused first on verbs denoting changes in space, whose syntactic properties were related to specific semantic distinctions, such as the opposition between "movement" and "displacement". This volume provides an overview of recent studies

on the semantics of dynamic space in French and addresses important questions about motion expression, among which "goal bias" and asymmetry of motion, the status of locative PPs, the expression of manner, fictive or non-actual motion. Descriptive, experimental and formal or computational analyses are presented, providing complementary perspectives on the main issue. The volume is intended for researchers and advanced students wishing to learn about both spatial semantics in French and recent debates on the representation of motion events in language and cognition.

This is a book about Aristotle's philosophy of language, interpreted in a framework that provides a comprehensive interpretation of Aristotle's metaphysics, philosophy of mind, epistemology and science. The aims of the book are to explicate the description of meaning contained in De Interpretatione and to show the relevance of that theory of meaning to much of the rest of Aristotle's philosophy. In the process Deborah Modrak reveals how that theory of meaning has been much maligned.

Prostitution has always fascinated the public and bewildered policy makers. Reframing Prostitution explores several aspects of this multidimensional phenomenon, examining different ways in which prostitution is and was being practised in different places and

different times, best practices in the regulation of prostitution as well as wider social and psychological issues, such as the construction of prostitution as incivility or of prostitutes as a socially problematic group or as victimised individuals. The book also addresses normative questions with respect to policy making, unmasking the purposes behind certain societal reactions towards prostitution as well as proposing innovative solutions that could reconcile societal fears of exploitation and abuse while meeting the rights and needs of individuals voluntarily involved in prostitution. With contributions across social science disciplines, this international collection presents a valuable discussion on the importance of empirical studies in various segments of prostitution, highlights social contexts around it and challenges regulatory responses that frame our thinking about prostitution, promoting fresh debate about future policy directions in this area.

"The" Satires of Juvenal,
BRILL

This book examines the religious and ideological consequences of mass

conversion in Iberia, where Jews and Muslims were forcibly converted or expelled at the end of the XVth century and beginning of the XVIth, and in this way it explores the fraught relationship between origins and faith. It treats also of the consequences of coercion on intellectual debates and the production of knowledge, taking into account how integrating new converts from Judaism and Islam stimulated Christian scholars to confront the converts' sacred texts and created a distinctive peninsular hermeneutics. The book thus assesses the importance of the "Converso problem" in issues such as religious dissidence, dissimulation, and doubt and skepticism while establishing the process by which religious dissidence came to be categorized as heresy and was identified with converts from Judaism and Islam even when Lutheranism was often in the background.

Dictionaries are didactic books used as consultation instruments for self-teaching. They are composed by an ordered set of linguistic units which reflects a double structure, the macrostructure which correspond to the word list and the microstructure that refers to the contents of each lemma. The great value of dictionaries nests in the fact that they establish a standard nomenclature and prevent in that way the appearance of new useless synonyms. This dictionary contains a total of about 27.500 main English entries, and over of 130.000 translations that should normally sufficiently cover all fields of life sciences. The basic criteria used to accept a word a part of the dictionary during the development period in order of importance were usage, up-to-dateness, specificity, simplicity and conceptual relationships. The dictionary meets the standards of higher education and covers all main fields of life sciences by setting its primary focus on the vastly developing fields of cell biology, biochemistry, molecular biology, immunology, developmental biology,

<p>microbiology, genetics and also the fields of human anatomy, histology, pathology, physiology, zoology and botany. The fields of ecology, paleontology, systematics, evolution, biostatistics, plant physiology, plant anatomy, plant histology, biometry and lab techniques have been sufficiently covered but in a more general manner. The latest Latin international anatomical terminology "Terminologia Anatomica" or "TA" has</p>	<p>been fully incorporated and all anatomical entries have been given their international Latin TA synonym. This dictionary will be a valuable and helpful tool for all scientists, teachers, students and generally all those that work within the fields of life sciences. <i>Rules for Compositors and Readers ... at the University Press, Oxford</i> American Philosophical Society Betrifft die Handschrift Cod. 120.II der Burgerbibliothek Bern. -</p>	<p>Abb. auf Umschlag: f. 101r. <u>Andreas Capellanus on Love?</u> Elsevier Andersen-Wyman's book undoes most scholarly uses and understandings of De amore by Andreas Capellanus.
