Orthoptera is one of the most important and interesting Orders of the Class Insecta. They include grasshoppers and crickets that have a fundamental role in many terrestrial ecosystems. In this complete and updated publication all the 382 taxa (species and subspecies) of Orthoptera nowadays known from Italy are treated; 162 of these are endemic! Unfortunately, as well as for other groups of organisms, also orthopterans have many species suffering from maximum degree of threat, according to the Red List of Threatened Species compiled by the International Union for Conservation of Nature (IUCN).

Therefore, Grasshoppers & Crickets of Italy is very important also from a conservation point of view; it allows to recognize the endangered species for planning interventions to safeguard them. This new volume is an absolutely innovative tool in the field of nature handbooks. The authors have succeeded in realizing a text with a new and appealing graphic design, easy to consult, full of photos of morphological details useful to identify the species also by non-experts. Furthermore, very useful for the field work are the maps of the distribution areas, detailed at provincial level, for each species. This book will be useful not only for orthopterists, but also for young entomologists who will be able to measure their ability in identifying species, for agricultural technicians and

for all nature and entomology lovers. Gli Ortoteri sono uno degli ordini più importanti e interessanti della grande classe degli insetti. Essi comprendono grilli e cavallette, che rivestono un ruolo fondamentale negli ecosistemi terrestri. In questa pubblicazione completa e aggiornata sono trattati tutti i 382 taxa (specie e sottospecie) di Ortoteri conosciuti oggi in Italia; di questi ben 162 risultano endemici, cioè esclusivi del nostro Paese! Purtroppo, come per altri gruppi di organismi, anche tra gli Ortoteri figurano specie al massimo grado di minaccia, secondo la lista rossa stilata dall'IUCN. Grasshoppers & Crickets of Italy è utile, quindi, anche dal punto di vista conservazionistico, per conoscere le specie in pericolo e attuare interventi in grado di garantirne la

tutela. Questa nuova guida è uno strumento assolutamente innovativo nel campo dei manuali naturalistici di campagna. Si tratta di un volume con una veste grafica moderna e accattivante, di facile consultazione, ricchissimo di immagini di particolari morfologici utili all'identificazione delle specie anche da parte di non esperti. Utilissime, per il lavoro sul campo, anche le mappe degli areali di distribuzione, dettagliate a livello di singola provincia. Una guida utile, non solo agli ortoterologi, ma anche ai giovani entomologi che vorranno misurarsi con la loro capacità di identificare le specie, ai tecnici agricoli e a tutti gli amanti della natura e dell'entomologia.

Single Session Thinking and Practice teaches readers how to implement single session approaches by encouraging practitioners and clients to collaborate in making the most of every encounter. Single session/one-at-a-time approaches are applicable in a multitude of settings, including clinics, private offices, medical centers, and student counseling services - and can be used both in person and online. Leading international figures and those practicing on the front lines provide guidance for conducting SST in a variety of contexts. Chapters feature descriptions of theoretical underpinnings, pragmatic clinical examples, cross-cultural applications, research findings, service delivery models, and implementation tips. This text will be an instant and

essential reference for anyone in the fields of brief therapy, casework, and healthcare, as well as walk-in and by-appointment single session services. *In L. Calpurnium Pisonem* Springer
 This book is intended as a practical handbook for those engaged in the task of analyzing the paleogeographic evolution of ancient sedimentary basins. The science of stratigraphy and sedimentology is central to such endeavors, but although several excellent textbooks on sedimentology have appeared in recent years little has been written about modern stratigraphic methods. Sedimentology textbooks tend to take a theoretical approach, building from physical and chemical theory and studies of modern environments. It is commonly difficult to apply this

information to practical problems in ancient rocks, and very little guidance is given on methods of observation, mapping and interpretation. In this book theory is downplayed and the emphasis is on what a geologist can actually see in outcrops, well records, and cores, and what can be obtained using geophysical techniques. A new approach is taken to stratigraphy, which attempts to explain the genesis of lithostratigraphic units and to de-emphasize the importance of formal description and naming. There are also sections explaining principles of facies analysis, basin mapping methods, depositional systems, and the study of basin thermal history, so important to the genesis of fuels and minerals. Lastly, an attempt is made to tie everything together by considering basins in the

con text of plate tectonics and eustatic sea level changes.

This book will be of importance to all who are interested in the discovery and revolutionary importance of the Dead Sea Scrolls. Its three purposes remain important: to present the facts about the seven Scrolls found in Cave I and the Cairo Damascus Document so that readers can draw their own conclusions; to provide an account of the discovery of the Scrolls and especially the acquisition of three by Sukenik and four by Yadin for the Hebrew University; and, more importantly, to describe each of the seven Scrolls and its contents.

Willing Migrants Springer Science & Business Media

Of all France's black African migrants, 85 per cent are Soninke from one area of West Africa. This study of their migration to Europe challenges the view that they were coerced by colonial tax and violence and claims that the evidence shows rather that they were indeed willing migrants.

Glaciated Coasts is a collection of articles that deals with shoreline morphologies of glaciated coasts and the processes that formed these coastlines in North America. This book examines nonsandy shorelines and covers a range of geologic and geographic coastal settings in a northern-southern order. This text investigates and compares the glaciated northern shorelines. These shorelines north of the glacial limit are mostly of the primary form in different stages of modification by marine agents. Shorelines are associated with embayments; baymouth barriers in turn enclose embayments. This book describes beaches as having coarse or mixed sediment populations. Most beaches worldwide have gravel clasts that have been rounded and sorted by

marine processes. In the southeastern coast of Alaska, active tectonics on a mountainous shoreline is evident. The region also shows emergent and submerging shorelines with a glacial imprint undergoing formation by modern processes. This book also gives examples of gravel beach environments in various coastal settings. This book can prove useful for students of meteorology, oceanography as well as to marine ecologists and biologists. It can also benefit readers whose interest lie with coastal environment or with the general earth sciences.

Using Geochemical Data brings together in one volume a wide range of ideas and methods currently used in geochemistry,

providing a foundation of knowledge from which the reader can interpret, evaluate and present geochemical data.

The Message of the Scrolls PIMS

The Viyahapannatti (Vyakhyaprajnapati) or Bhagavai (Bhagavati) is the fifth Anga of the Jaina Svetambara Canon. It is as the title says a Proclamation of Explanations` viz. of explanations given as a rule by Mahavira the founder of Jainism, in answer to questions raised by his disciples in most cases Goyama Indabhui. Experts have described this monumental work as an omnium gatherum, a tohu bohu etc.: its questions and answers, as a matter of fact, deal with a bewildering variety of topics, embracing all the important domains of the Jaina doctrine; moreover

its teachings are presented in many different forms.
