"A primary condition for fresh thinking on the Trinity is an accurate, objective account of past and present thought" wrote one reviewer when The Triune God first appeared in 1972. "This [is what] Fortman has presented sensitively, accurately, and compactly." The author sets out "to trace the historical development of Trinitarian doctrine from its written beginnings to its contemporary status." Thus he treats the biblical witness, the Council of Nicea, Augustine, the Middle Ages, and the development of this doctrine from the fifteenth century to the present in the Protestant, Orthodox, and Catholic traditions.

The work of the 'other' comic poets of classical Athens, those who competed with, and in some cases defeated, their (eventually) better-known fellow comedian, Aristophanes, has almost eluded the historical record. The poetry of Cratinus, Phrynichos, Eupolis and the rest has

survived only in tantalising, often tiny, fragments and citations.

Modern studies in this field have themselves often been difficult of access. Here an exceptional cast of scholars, including most of the leading international authorities, provides a set of 28 interpretative essays to cover every one of these 'other' poets of Athenian Old Comedy for whom significant evidence survives. The work includes a comprehensive bibliography, and is a landmark in the study of Old Comedy.

The 16th ICSMGE responds to the needs of the engineering and construction community, promoting dialog and exchange between academia and practice in various aspects of soil mechanics and geotechnical engineering. This is reflected in the central theme of the

conference
'Geotechnology in Harmony with the Global Environment'. The proceedings of the conference are of great interest for geo-engineers and researchers in soil mechanics and geotechnical engineering. Volume 1 contains 5 plenary session lectures, the Terzaghi Oration, Heritage Lecture, and 3 papers presented in the major project session. Volumes 2, 3, and 4 contain papers with the following topics: Soil mechanics in general; Infrastructure and mobility; Environmental issues of geotechnical engineering; Enhancing natural disaster reduction systems; Professional practice and education. Volume 5 contains the report of practitioner/academic forum, 20 general reports, a summary of the sessions and workshops held during the conference.

Is the arms trade totally uncontrolled? What are the main obstacles to limitations on arms transfers? What can be learned from past attempts at arms transfer control? This book, which completes SIPRI's trilogy on the facts and implications of Third World build-up of major conventional weapons, assesses past efforts, current proposals and future possibilities to limit the transfer of weapons and military technology to Third World countries. It is a companion to the two SIPRI volumes, *Arms Production in the Third World* (1986) and *Arms Transfers to the Third World 1971-85* (OUP, 1987)

Despite remarkable progress in genome

science, we are still far from a clear understanding of how genomic DNA is packaged without entanglement into a nucleus, how genes are wrapped up in chromatin, how chromatin structure is faithfully inherited from mother to daughter cells, and how the differential expression of genes is enabled in a given cell type. Exploring and answering these questions constitutes one of the next frontiers in the 21st century. We are just beginning to appreciate how Multifarious DNA structures provide additional structural and functional dimensions to chromatin organization and gene expression. DNA Conformation and Transcription is the first book that compiles the fruits of the studies that have been performed to date to solve the riddle 'written' in DNA conformation ("conformation code"). This book provides a comprehensive overview of the field by covering history of the field, up-to-date topics, clarifications of present day research, and future perspective of what is still to be discovered. Thus, it serves as an invaluable source of information on the "conformation code".
