"Most of the research on multinationals has focused on companies from developed markets. Research on multinationals from emerging economies is relatively new and most of the attention has been focused on multinationals from Asia. Little research has been done on the internationalization strategies and challenges of Latin American multinationals. This book aims to fill this void. Studying Latin American multinationals will not only provide insights into specific strategies deployed by successful firms but will also identify best practices that can be employed by the next generation multinationals from emerging markets." --Book Jacket.

A Historical Perspective on Light Infantry  
W. W. Norton & Company

"This book, a polished, winding meditation on the theory and fractiousness of motorcycles, celebrates

both their eccentric history and the wary pleasures of touring."—The New Yorker  
In a book that is "a must for anyone who has loved a motorcycle" (Oliver Sacks), Melissa Pierson captures in vivid, writerly prose the mysterious attractions of motorcycling. She sifts through myth and hyperbole: misrepresentations about danger, about the type of people who ride and why they do so. The Perfect Vehicle is not a mere recitation of facts, nor is it a polemic or apologia. Its vivid historical accounts—the beginnings of the machine, the often hidden tradition of women who ride, the tale of the defiant ones who taunt death on the racetrack—are intertwined with Pierson's own story, which, in itself, shows that although you may think you know what kind of person rides a motorcycle, you probably don't.  
Segregation by Design DIANE Publishing  
Jupiter's Travels -Ted Simon's astonishing 4 year motorbike journey around the world  
The book that inspired Ewan McGregor's Long Way Round  
In the late 1970s Ted Simon set off on a Triumph and rode 63,000 miles over four years through fifty-four countries in a journey that took him around the world. Through breakdowns, prison, war, revolutions, disasters and a Californian commune, he travelled into the depths of fear and reached the heights of euphoria. He met astonishing people and was treated as a spy, a welcome stranger and even a god. For Simon the trip became a journey into his own soul, and for many others - including bikers Charley Boorman and Ewan McGreggor - it provides an inspiration they will never

forget. This classic text, which has informed a whole genre of travel writing in the thirty years since it was first published, will never be bettered for sheer adventure, passion, humour and honesty. Brought up in England by a German mother and a Romanian father, Ted Simon found himself impelled by an insatiable desire to explore the world. It led him to abandon an early scientific career in favour of journalism, and he has worked for several newspapers and magazines on Fleet Street and elsewhere. Ted Simon is also the author of *Riding Home* and *The Gypsy in Me*.

Long range shooting in the United States is as old as this country is young. Shooters have always had a fascination with shooting at distance, whether they are plinkers, competitive shooters, or hunters. The ability to place rifle bullets in the same hole of a target or kill an animal quickly is a goal to which we all aspire. In recent years the interest in tactical precision rifles has increased, with many factory and custom rifle makers plying their art producing rifles that can easily outperform the ability of many shooters. Expert Robert A. Sadowski proves to be a masterful instructor on all aspects related to precision shooting in the *Shooter's Bible Guide to Tactical Firearms*. This *Shooter's Bible* guide will help new and experienced shooters in making smart equipment purchases that range from rifles and optics to ammunition and gear. The shooting school section provides instructions for those of us who have had no formal training. For experienced shooters, having current information on hand in one place can be an invaluable resource. And no *Shooter's Bible* guidebook is complete without a detailed products section showcasing rifles from

all across the market. Other topics covered include: Top 10 long-range rifles Precision rifle maintenance Anatomy of a riflescope Shooting technique, positions, and drills And much more! Pick up a copy of the *Shooter's Bible Guide to Tactical Firearms* to learn everything you need to know about precision, long-range shooting. Skyhorse Publishing is proud to publish a broad range of books for hunters and firearms enthusiasts. We publish books about shotguns, rifles, handguns, target shooting, gun collecting, self-defense, archery, ammunition, knives, gunsmithing, gun repair, and wilderness survival. We publish books on deer hunting, big game hunting, small game hunting, wing shooting, turkey hunting, deer stands, duck blinds, bowhunting, wing shooting, hunting dogs, and more. While not every title we publish becomes a *New York Times* bestseller or a national bestseller, we are committed to publishing books on subjects that are sometimes overlooked by other publishers and to authors whose work might not otherwise find a home.

This study seeks to clarify the nature of light infantry. General characteristics of light infantry forces are identified, and an analysis of how light forces operate tactically and how they are supported is presented. In the process, the relationship of the light infantry ethic to its organization is evaluated, and the differences between light infantry and conventional infantry is illuminated. For the purpose of this study, the term conventional infantry refers to modern-day motorized and mechanized infantry and to the large dismounted infantry forces typical of the standard infantry divisions of World War II, the Korean

War, and the Vietnam War. The study concludes that light infantry is unique and distinct. A light infantry ethic exists and manifests itself in a distinctive tactical style, in a special attitude toward the environment, in a freedom from dependence on fixed lines of communication, and in a strong propensity for self-reliance. The study is based on a historical analysis of 4 light infantry forces employed during and since World War II: The Chindits, in the 1944 Burma campaign against the Japanese; The Chinese communist Forces during the Korean War; British operations in Malaya and Borneo 1948-66; and the First Special Service Force in the mountains of Italy 1942-44. -- p. Rarely is a reader exposed to such an extraordinary, multifaceted presentation of aerospace technology as Bob Brulle narrates in this book. After returning from duty as a combat fighter pilot in World War II, this Belgian immigrant developed a multitalented and innovative aerospace career path that addressed many of the aerospace professions. Along the way he forged a career in the aviation and space field that resulted in his participating in several of the most momentous aerospace achievements of the past century. He also expanded his education through hard work to a level at which he was qualified to teach graduate-level aerospace engineering courses. It is interesting to follow how the analysis and design techniques of aerospace vehicles progressed over the years, which incidentally reveals the large role that the computer played in making that possible. The story on the early Cape Canaveral operations was amusing and showed that enterprising innovations played a large role in a successful undertaking. Some of the projects described were a surprise, as I had never heard of them, like reading how a pencil-shaped missile was built that could fly and maneuver over an intercontinental distance at a high hypersonic velocity. He also described how American engineers and scientists fought the Cold War battle for technological supremacy on their desks and in their laboratories.

The initiatives by which this enterprising engineer develops his technical approach to a project are very informative and offer the reader an insight into the workings of successful operations. He achieves an interesting behind-the-scenes look at how aerospace history is made by weaving in the historical significance of these projects as they are developed. As a former aeronautical engineer at the rapidly growing Mc- Donnell Aircraft Corporation, Bob gives us an interesting exposure to the importance of top management's relationship with the workforce in a successful company. "Mr. Mac" made it a point to make all his employees team members by frequent communication and friendly association.

Provides an account, from the point of view of the U.S. Army forces employed, of the 1990-91 Persian Gulf War, from

the Iraqi invasion of Kuwait to the withdrawal of coalition forces from southeastern Iraq. It focuses on the Army's part in this war, particularly the activities of the Headquarters, Third Army, and the Army Forces Central Command (ARCENT). It looks especially at the activities of the VII Corps, which executed ARCENT's main effort in the theater ground force Schwerpunkt -- General Schwarzkopf's "Great Wheel." This is not an official history; the author speaks in his own voice and makes his own judgments. Maps.

Riding High is packed with untold episodes from the Jupiter journey of Ted Simon's book *Jupiter's Travels*: his confrontations with a murderous military in Chile, his farcical arrest in India, bizarre customs in Thailand and Malaysia, his hilarious entanglements with a bottle of bad Dubonnet in Ecuador, and many more. Simon contrasts them with the touching and turbulent events that followed his return to domesticity, and explains what became of him in 'life after travel.'

For 19 seasons, Rod Carew was a maestro in the batter's box. Uncoiling from his crouched stance, he seemed to guide the ball wherever he wanted on the way to a whopping seven batting titles and a spot in the Baseball Hall of Fame. If only everything in life had been as easy as he made hitting look. In *One Tough Out: Fighting Off Life's Curveballs*, Carew reflects on the highlights, anecdotes, and friendships from his outstanding career, describing the abuse, poverty, and racism he overcame to even reach the majors. In conversational, confessional prose, he takes readers through the challenges he's conquered in the second half of his life, from burying his youngest daughter to surviving several near-fatal bouts with heart disease. He also details the remarkable reason he's alive today: the heart transplant he received from Konrad Reuland, a 29-year-old NFL player he'd met years before. Carew explains how that astonishing connection was revealed and the unique bond he and his wife, Rhonda, have since forged with his donor's family. An important thread running through this mosaic of Carew's life is his faith. He illustrates how his mother instilled those beliefs during their darkest days and how conversations with God helped him fight off every curveball life has thrown his way.

Triumph's Bonneville and its single-carbed sibling, the TR6, are two of the most revered models in all of motorcycling. Distinguished by their handsome lines and pace-setting performance, the Bonneville and Tiger ruled the streets and race tracks from their introduction in the late 1950s through Triumph's golden age in the 1960s. Devotion to the marque remained strong even as the sun slowly set on the company's fortunes in the late 1970s and early 1980s. The original Triumph's demise in 1983 simply served to cement the legendary status of its long-lived top guns, the Bonneville and TR6.

*College Physics* Univ of California Press  
Riding motorcycles is fun, but author Ken Condon maintains that there is a state of consciousness to be achieved beyond the simple pleasure of riding down the road. Riding in the Zone helps riders find that state of being. It's the experience of being physically and mentally present in the moment, where every sense is sharply attuned to the ride. Your mind becomes silent to the chatter of daily life, and everyday problems seem to dissolve. You feel a deeper appreciation for life. Your body responds to this state of being with precise, fluid movements, you feel in balance, your muscles are relaxed, and it seems as though every input you make is an expression of mastery. This is "the Zone." Condon identifies all of the factors that affect entering the Zone and addresses each one individually, from the development of awareness and mental skills to mastering physical control of the motorcycle. At the end of each chapter are drills designed to transform the book's ideas into solid, practical riding skills. Riding in the Zone takes riders to

the next level in their skill set.

**The Plunge of Icarus** Mike Arman Pub

This text blends traditional introductory physics topics with an emphasis on human applications and an expanded coverage of modern physics topics, such as the existence of atoms and the conversion of mass into energy. Topical coverage is combined with the author's lively, conversational writing style, innovative features, the direct and clear manner of presentation, and the emphasis on problem solving and practical applications.

*The Art of the Motorcycle* Motorbooks

Suspension is probably the most misunderstood aspect of motorcycle performance. This book, by America's premier suspension specialist, makes the art and science of suspension tuning accessible to professional and backyard motorcycle mechanics alike. Based on Paul Thede's wildly popular Race Tech Suspension Seminars, this step-by-step guide shows anyone how to make their bike, or their kid's, handle like a pro's. Thede gives a clear account of the three forces of suspension that you must understand to make accurate assessments of your suspension's condition. He outlines testing procedures that will help you gauge how well you're improving your suspension, along with

your riding. And, if you're inclined to perfect your bike's handling, he even explains the black art of chassis geometry. Finally, step-by-step photos of suspension disassembly and assembly help you rebuild your forks and shocks for optimum performance. The book even provides detailed troubleshooting guides for dirt, street, and supermoto--promising a solution to virtually any handling problem.
