This guide focuses on the DA42 TwinStar, equipped with Technify engines as well as the DA42NG and DA42VI, both equipped with Austro E4-B engines. The content is divided into three main sections: Multiengine Transition describes important concepts for multiengine aerodynamics, one engine inoperative procedures, and risk management associated with engine failure. The Systems Overview gathers important information from various parts of the Diamond Approved Flight Manual into a single, convenient location. The Flight Procedures section describes procedures and techniques refined by the author over years of dual instruction given in the DA42. These procedures are organized to follow the order of the Areas of Operation and Tasks found in the FAA Commercial Pilot Practical Test Standards.

The limitations of an aircraft restrict its operation in order to ensure the safety of each of them. While commercial aircraft have limitations that are difficult to overcome in normal operation, it is important that the pilot knows each of them and respects its maximum values on each flight. In this information manual, all the operational limitations of an AIRBUS A320 standard model are detailed. The maximum takeoff and landing weight, the maximum crosswind component, maximum speeds, and a number of limitations that the aircraft must not exceed at any time during the flight. The pilot in command will be responsible for complying with this condition of safe flight, respecting the maximum values for each case. Knowing the limitations of the aircraft will help the pilot to understand the operation of his aircraft and operate it within the safe and effective parameters of flight.

This manual has been prepared to inform the pilot of systems and features incorporated into the Aeronca Model 7AC. When this model was manufactured a Pilot's Operating Handbook (POH) was not released. This particular handbook has been compiled utilizing published materials from similar models of the Champion, such as the USAF Series L-16A and L-16B. This manual does NOT replace the FAA approved placards and operating limitations in a specific aircraft. If a difference exists between this manual and the FAA approved placards/operating limitations, the FAA approved placards and operating limitations shall be the authority.
